Star Progetti Helios TOP15 Quartz Infrared Lamp

For use with all Infresco® Controllers

IP Rating

: IP65

Supply Voltage : 220/240vAC

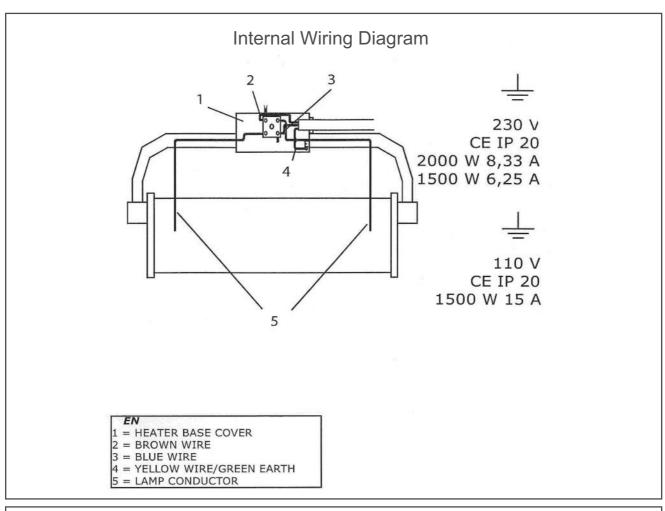

Supply Frequency : 50/60Hz

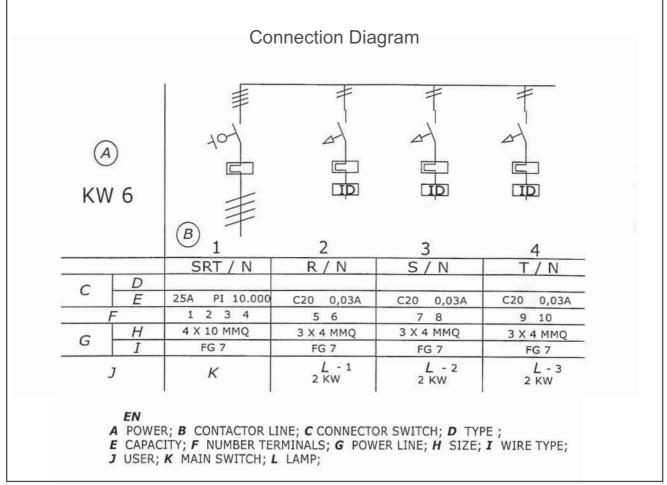

Power Rating

: 1500 Watts

For full data-sheet – see following pages...

IMPORTANT!

- 1. The Heliosa® must be earthed.
- 2. Before opening the base, make sure that the appliance has been disconnected from the power supply.
- 3. Do not touch the halogen lamp with your hands. The guarantee will be rendered null and void if the lamp is touched. Only the terminal guards may be touched. If you accidentally touch the lamp surface, wipe it over immediately with a cloth moistened with alcohol.
- 4. Always position the appliance with the lamp horizontal.

POSITIONING HELIOSA® Never install the heater in a vertical position.

- 1. In compliance with the heating system requirements, fix *Heliosa*® by means of the holes in the rear of the connection box. The installation height is usually between 2.5 and 3.0 meters.
- 2. Connect Heliosa® to a single-phase 230 V / 110 V power supply (according to the country).
- 3. Adjust the *Heliosa*® reflector in the direction of the beam required (usually at an angle of..1.5 degrees in relation to the horizontal plane).
- 4. NEVER install Heliosa® on an inflammable surface. Never direct the heater towards inflammable surfaces.
- 5. Install *Heliosa*® at a free distance (in a visual line) of no less than 2 m from objects made of cardboard, fabric, etc. or windows. In workshops or garages where paints or fuels are stored, install *Heliosa*® at a distance of no less than 4 m from inflammable products.
- 6. Install Heliosa® at a safe distance of 3 mt from people.
- 7. To prevent damage to the lamp, NEVER use *Heliosa®* in dusty closed rooms.

CONNECTING TO THE POWER SUPPLY

- 1. Make sure that the power supply corresponds to the power requirements of the appliance.
- 2. Use a 3-wire power cable with heat-resistant PVC sheath (usually 3 x 1.5 mm2).

BATHROOMS

When installing *Heliosa*® in bathrooms, make sure that it is positioned out of reach of persons using the bathtub or the shower.

WALL INSTALLATION

- 1. Rotate the rear plate by 90°, then secure to the wall.
- 2. Gently rotate the appliance until it is positioned horizontally in relation to the wall.
- 3. Ensure that the appliance is installed at a distance of no less than 200 mm from the ceiling.

INSTALLATION REQUIREMENTS

- 1. Switch each single appliance on then off; do not use the main switch to test the appliances, as voltage surges could burn out the halogen lamps.
- 2. Heliosa® heaters are designed for indoor installation. The appliances may be installed outdoors provided that they are protected against the elements.
- 3. The Manufacturer declines all responsibility for failure to observe appliance use instructions.
- 4. Always install the appliance in a perfectly horizontal position.

SWITCH NOMINAL POWER RATING

Always bear in mind the high current surge of the appliance when it is switched on when choosing switches, disconnection devices, relays, contactors and so on.

CEILING INSTALLATION

When installing the heater on the ceiling, ensure that it is perfectly horizontal.

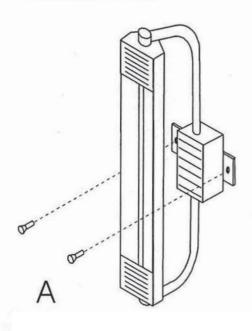

ATTENTION

For a correct positioning of the reflector, it is necessary to hold firmly the side shells and tilt the reflector. This operation must be done when the reflector is off (page. 4 fig. C).
