Description

The PI6C48545 is a high-performance low-skew LVDS fanout buffer. PI6C48545 features two selectable single-ended clock inputs and translate to four LVDS outputs. The CLK₀ and CLK₁ inputs accept LVCMOS or LVTTL signals. The outputs are synchronized with input clock during asynchronous assertion/deassertion of CLK_EN pin. PI6C48545 is ideal for single-ended LVTTL/LVCMOS to LVDS translations. Typical clock translation and distribution applications are data-communications and telecommunications.
