

300 mA low quiescent current very low noise LDO (automotive for SOT23-5L package)

Datasheet - production data

Applications

- Mobile phones
- Portable consumer and industrial devices
- Cordless phones and similar battery-powered systems
- Automotive P.O.L.
- A.D.A.S.

Description

The LDK130 low drop voltage regulator provides 300 mA of maximum current from an input supply voltage in the range of 1.9 V to 5.5 V, with a typical dropout voltage of 100 mV.

It is stabilized with a ceramic capacitor on the output.

The very low drop voltage, low quiescent current and low-noise features make it suitable for low-power battery-powered applications.

An enable logic control function puts the LDK130 in shutdown mode allowing a total current consumption lower than 1 μ A.

The device also includes short-circuit constant current limiting and thermal protection.
