

HA-2400/883

PRAM Four-Channel Programmable Operational Amplifier

FN3926
Rev 0.00
April 9, 2012

HA-2400/883 is a four-channel programmable amplifier providing a level of versatility unsurpassed by any other monolithic operational amplifier. Versatility is achieved by employing four input amplifier channels, any one (or none) of which may be electronically selected and connected to a single output stage through DTL/TTL compatible address inputs. The device formed by the output and the selected pair of inputs is an op amp which delivers excellent slew rate, gain bandwidth and power bandwidth performance. Other advantageous features for these dielectrically isolated amplifiers include high voltage gain and input impedance coupled with low input offset voltage and offset current. External compensation is not required on this device at closed loop gains greater than 10.

Each channel of the HA-2400/883 can be controlled and operated with suitable feedback networks in any of the standard op amp configurations. This specialization makes these amplifiers excellent components for multiplexing, signal selection and mathematical function designs. With 20V/μs slew rate, 20MHz gain bandwidth and low input bias currents makes this device an ideal building block for signal generators, active filters and data acquisition designs. Programmability, coupled with 9mV typical offset voltage and 50nA offset current, makes these amplifiers outstanding components for signal conditioning circuits.

TRUTH TABLE

D ₁	D ₀	EN	SELECTED CHANNEL
L	L	H	1
L	H	H	2
H	L	H	3
H	H	H	4
X	X	L	None

Features

- This Circuit is Processed in Accordance to MIL-STD-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- Digital Programmability
- High Slew Rate
 - Uncompensated 20V/μs Min
 - Compensated 6V/μs Min
- Wide Gain Bandwidth
 - Uncompensated 20MHz Min
 - Compensated 4MHz Min
- High Gain 50kV/V
- Low Offset Current 50nA
- Single Capacitor Compensation for Unity Gain
- DTL/TTL Compatible Inputs

Applications

- Single Selection/Multiplexing
- Op Amp Gain Stage
- Frequency Oscillator
- Filter Characteristics
- Add-Subtract Functions
- Integrator Characteristics
- Comparator Levels

Ordering Information

PART #	PART MARKING	TEMP. RANGE (°C)	PACKAGE	PKG. DWG. #
HA1-2400/883	HA1-2400/883	-55 to +125	16 Ld CERDIP	F16.3

Absolute Maximum Ratings

Voltage Between V+ and V- Terminals 45V
 Differential Input Voltage $\pm V_{\text{SUPPLY}}$
 Voltage at Either Input Terminal V+ to V-
 Digital Input Voltage -0.76V to +10V
 Peak Output Current (Short Circuit Protected) $I_{\text{SC}} < \pm 33\text{mA}$
 ESD Rating <2000V

Recommended Operating Conditions

Temperature Range -55°C to +125°C
 Supply Voltage +15V
 Negative Supply Voltage -15V

Thermal Information

Thermal Resistance (Typical) θ_{JA} (°C/W) θ_{JC} (°C/W)
 CerDIP Package (Note 1) 91 25
 Internal Power Dissipation
 Package Power Dissipation Limit at +75°C for $T_{\text{J}} \leq +175^\circ\text{C}$
 CerDIP Package 1.11W
 Package Power Dissipation Derating Factor Above +75°C
 CerDIP Package 11.1mW/°C
 Junction Temperature (T_{J}) +175°C
 Storage Temperature Range -65°C to +150°C
 Maximum Lead Temperature (Soldering 10s) +300°C

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

1. θ_{JA} is measured with the component mounted on a low effective thermal conductivity test board in free air. See Tech Brief [TB379](#) for details.

TABLE 1. DC ELECTRICAL PERFORMANCE CHARACTERISTICS

Device Tested at: V+ = +15V, V- = -15V, $R_{\text{S}} = 100\Omega$, $R_{\text{L}} = 500\text{k}\Omega$, $V_{\text{O}} = 0\text{V}$, unless otherwise specified. Digital Inputs: $V_{\text{IL}} = +0.5\text{V}$, $V_{\text{IH}} = +2.4\text{V}$, limits apply to each of the four channels, when addressed.

Settling Time	T_{SET1}	$A_V = +1V$, $C_{COMP} = 15pF$, $R_L = 2k\Omega$, $C_L = 50pF$, $V_O = 10V_{P-P}$ to 0.1% F.V., Logic Control = +5.0V	3	+25	-	2.5	μs

TABLE 3. ELECTRICAL PERFORMANCE CHARACTERISTICS (Continued)Device Characterized at: $V_+ = +15V$, $V_- = -15V$, unless otherwise specified.

PARAMETER	SYMBOL	CONDITIONS	NOTES	TEMP (°C)	MIN	MAX	UNITS
Slew Rate (Note 5)	+SR ₂	$V_{OUT} = -5V$ to $+5V$, $R_L = 2k\Omega$, $C_L = 50pF$, $A_V = +10V$, $C_{COMP} = 0pF$	3	+25	20	-	V/ μs
	-SR ₂	$V_{OUT} = +5V$ to $-5V$, $R_L = 2k\Omega$, $C_L = 50pF$, $A_V = +10V$, $C_{COMP} = 0pF$	3	+25	20	-	V/ μs
Output Delay	T _{DEL}	$R_L = 2k\Omega$, $C_L = 50pF$, $C_{COMP} = 15pF$, $V_{IN} = +5V$	3	+25	-	250	ns
Minimum Closed Loop Stability	CLS ₁	$R_L = 2k\Omega$, $C_L = 50pF$, $C_{COMP} = 15pF$	3	+25	1	-	V/V
	CLS ₂	$R_L = 2k\Omega$, $C_L = 50pF$, $C_{COMP} = 0pF$	3	+25	10	-	V/V

NOTES:

- Parameters listed in Table 3 are controlled via design or process parameters and are not directly tested at final production. These parameters are lab characterized upon initial design release, or upon design changes. These parameters are guaranteed by characterization based upon data from multiple production runs which reflect lot to lot and within lot variation.
- FPBW = Slew Rate/($2\pi V_{PEAK}$).
- $A_V = +10$, $C_{COMP} = 0pF$.

NOTES:

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. This dimension allows for off-center lid, meniscus, and glass overrun.
6. Dimension Q shall be measured from the seating plane to the base plane.
7. Measure dimension S1 at all four corners.
8. N is the maximum number of terminal positions.
9. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
10. Controlling dimension: INCH.
