- When using the products herein, the applicability and suitability of such products for the intended purpose or object shall be reviewed at the users responsibility.
- Although Sanken undertakes to enhance the quality and reliability of its products, the occurrence of failure and defect of semiconductor products at a certain rate is inevitable. Users of Sanken products are requested to take, at their own risk, preventative measures including safety design of the equipment or systems against any possible injury, death, fires or damages to the society due to device failure or malfunction.
- Sanken products listed in this catalog are designed and intended for the use as components in general purpose electronic equipment or apparatus (home appliances, office equipment, telecommunication equipment, measuring equipment, etc.). Before placing an order, the user's written consent to the specifications is requested.
- The use of Sanken products without the written consent of Sanken in the applications where extremely high reliability is required (aerospace equipment, nuclear power control systems, life support systems, etc.) is strictly prohibited.
- Anti radioactive ray design is not considered for the products listed herein.
- This publication shall not be reproduced in whole or in part without prior written approval from Sanken.
- Gallium arsenide is used in some of the products listed in this publication. These products are dangerous if they are burned or smashed in the process of disposal. It is also dangerous to drink the liquid or inhale the gas generated by such products when chemically disposed.

Application Note for Regulator ICs

■ Temperature and Reliability

Reliability of an IC is generally heavily dependent on operating temperature. Heat radiation must be fully considered, and an ample margin should be given to the radiating area in designing heatsinks. When mounting ICs on heatsinks, always apply silicone grease and firmly tighten. Air convection should actively be used in actual heat dissipation. The reliability of capacitors and coils, the peripheral components, is also closely related to temperature. A high operating temperature may reduce the service life. Exceeding the allowable temperature may cause coils to be burned or capacitors to be damaged. Make sure that output smoothing coils and input/output capacitors do not exceed their allowable temperature limit in operation. We recommend, in particular, to provide an ample margin for the ratings of coils to minimize heat generation.

■ Power Dissipation (P_D)

1. Dropper Type

$$P_D = I_O \cdot [V_{IN}(\text{mean}) - V_O]$$

2. Switching Type

$$P_D = V_O \cdot I_O \left(\frac{100}{\eta_{\chi}} - 1 \right) - V_F \cdot I_O \left(1 - \frac{V_O}{V_{IN}} \right)$$

Efficiency η_{χ} depends on input/output conditions.

Refer to the efficiency characteristics.

V_O : Output voltage η_{χ} : Efficiency

V_{IN} : Input voltage V_F : Diode forward voltage

I_O : Output current

■ Heatsink Design

The maximum junction temperature T_j (max) and the maximum case temperature T_c (max) given in the absolute maximum ratings are specific to each product type and must be strictly met. Thus, heatsink design must be performed in consideration of the condition of use which affects the maximum power dissipation P_D (max) and the maximum ambient temperature T_a (max). To facilitate heatsink design, the relationship between these two parameters is presented in the T_a - P_D characteristic graphs. Heatsink design must be performed in the following steps:

1. Obtain the maximum ambient temperature T_a (max) (within the set).
2. Obtain the maximum power dissipation P_D (max).
3. Identify the intersection on the T_a - P_D characteristic graph and obtain the size of the heatsink to be used.

The size of a heatsink has been obtained. In actual applications, a 10 to 20% derating factor is

generally used. Moreover, the heat dissipation capacity of a heatsink is heavily dependent on how it is mounted. It is therefore important and recommended to measure the heatsink and case temperature in actual operating environments. The T_a - P_D characteristics are provided for each product type for reference purposes.

■ Setting DC Input Voltage

Observe the following precautions when setting the DC input voltage:

- $V_{IN(\text{min})}$ must be at least the set output voltage plus dropout voltage for the dropper type. It must be at least the recommended lowest input voltage for the switching type.
- $V_{IN(\text{max})}$ must not exceed the DC input voltage of the electrical characteristics.

■ Screw Torque

Screw torque should be between 0.588 to 0.686 [N • m] (6.0 to 7.0 [kgf • cm]).

■ Recommended silicone grease

Volatile type silicone grease may produce cracks after elapse of long term, resulting in reducing heat radiation effect.

Silicone grease with low consistency (hard grease) may cause cracks in the mold resin when screwing the product to a heatsink.

■ Others

This product may not be connected in parallel. The switching type may not be used for current boosting and stepping up voltage.

Dropper Type Regulator ICs [With Output ON/OFF Control] SI-3001S

Features

- Output current of 1.0A
- 5-terminal type <output on/off control, variable output voltage (rise only)>
- Voltage accuracy of $\pm 2\%$
- Low dropout voltage $\leq 1V$ at $I_O \leq 1.0A$, $\leq 0.5V$ at $I_O \leq 0.4A$
- Built-in overcurrent, overvoltage and thermal protection circuits
- Withstands external electromagnetic noises
- TO220 equivalent full-mold package

Notes:

- *1. Since $P_D(\text{max}) = (V_{IN} - V_O) \cdot I_O = 18(W)$, $V_{IN}(\text{max})$ and $I_O(\text{max})$ may be limited depending on operating conditions. Refer to the T_a - P_D curve to compute the corresponding values.
- *2. Refer to the dropout voltage.
- *3. I_{S1} rating shall be the point at which the output voltage V_O ($V_{IN} = 14V$, $I_O = 0.4A$) drops to -5%.
- *4. The output control terminal V_C is pulled up inside the IC. Each input level can be directly driven with LS-TTL ICs. Thus, LS-TTL direct driving is also possible.

Notes:

- *1. Since $P_{D(\text{max})} = (V_{IN} - V_O) \cdot I_{O1} + (V_{IN} - V_{O2}) \cdot I_{O2} = 22\text{ (W)}$, $V_{IN(\text{max})}$, $I_{O1(\text{max})}$ and $I_{O2(\text{max})}$ may be limited depending on operating conditions. Refer to the $T_a - P_D$ curve to compute the corresponding values.
- *2. Refer to the dropout voltage.
- *3. I_{S1} rating shall be the point at which the output voltage V_{O1} or V_{O2} ($V_{IN} = 14\text{V}$, $I_{O1} = 0.04\text{A}$ or $I_{O2} = 0.1\text{A}$) drops to -5%.
- *4. Overvoltage protection circuit is built only in CH2 (V_{O2} side).
- *5. The indicated temperatures are junction temperatures.
- *6. All terminals, except V_{IN} and GND, are open.

- C_{O1} : Output capacitor (47 to $100\mu\text{F}$, 50V)
 C_{O2} : Output capacitor (47 to $100\mu\text{F}$, 50V)
 *1 C_{IN} : Input capacitors (approx. $47\mu\text{F}$).
 Tantalum capacitors are recommended, for C_{O1} , C_{O2} and C_{IN} , especially at low temperatures.
 *2 D_1, D_2, D_3 : Protection diode.
 Required as protection against reverse biasing between input and output.

Note on Thermal Protection Characteristics:
The thermal protection circuit is intended for protection against heat during instantaneous short-circuiting. Its operation, including reliability, is not guaranteed for short-circuiting over an extended period of time.

Switching Type Regulator ICs SI-3201S

Features

- Output current of 3A ($T_a = 25^\circ\text{C}$, $V_{IN} = 8$ to 18V)
- High efficiency of 82% ($V_{IN} = 14\text{V}$, $I_O = 2\text{A}$)
- Requires 5 external components only
- Built-in reference oscillator (60kHz)
- Phase internally corrected
- Output voltage internally corrected
- Built-in overcurrent and thermal protection circuits
- Built-in soft start circuit

Notes:

*1. Efficiency is calculated by the following equation:

$$\eta = \frac{V_O \cdot I_O}{V_{IN} \cdot I_{IN}} \cdot 100 (\%)$$

*2. A dropping-type overcurrent protection circuit is built in the IC.

*3. An external voltage may not be applied to the soft start terminal. As shown in the diagram to the right, use this IC in the soft start mode with a capacitor or in the open-collector drive mode with a transistor. Leave the soft start terminal open when not using it since it is already pulled up in the IC.

External Dimensions (unit: mm)

Standard Circuit Diagram

Cautions:

- (1) A high-ripple current flows through C_1 and C_2 . Use high-ripple type 1000 μF or higher capacitors with low internal resistance. Refer to the respective data books for more information on reliability and electrical characteristics of the capacitor.
- (2) C_3 is a capacitor used for soft start.
- (3) L_1 should be a choke coil with a low core loss for switching power supplies.
- (4) Use a Schottky barrier diode for D_1 and make sure that the reverse voltage applied to the 2nd terminal (SW_{OUT} terminal) is within the maximum ratings (-1V). If you use a fast-recovery diode, the recovery voltage and the ON forward voltage may cause a reversed-bias voltage exceeding the maximum ratings to be applied to the 2nd terminal (SW_{OUT} terminal). Applying a reversed-bias voltage exceeding the maximum rating to the 2nd terminal (SW_{OUT} terminal) may damage the IC.
- (5) The 4th terminal (V_S) is an output voltage detection terminal. Since this terminal has a high impedance, connect it to the positive (+) terminal of C_2 via the shortest possible route.
- (6) Leave the 5th terminal (soft start terminal) open when not using it. It is pulled up internally.
- (7) To ensure optimum operating environment, connect the high-frequency current line with minimum wiring length.

- Built-in diagnostic function to detect short and open circuiting of loads and output status signals
- Low saturation PNP transistor use
- Allows direct driving using LS-TTL and C-MOS logic levels
- Built-in overcurrent and thermal protection circuits
- Built-in protection against reverse connection of power supply
- $T_J = 150^\circ\text{C}$ guaranteed
- Built-in Zener diode
- TO220 equivalent full-mold package not require insulation mica

Equivalent Circuit Diagram

- *1. The base terminal (D terminal) is connected to the output transistor base. It is also connected to the control monolithic IC. Do not, therefore, apply an external voltage in operation.
*2. SDH04 have two or three terminals of the same function (V_B , Out1, Out2, GND). The terminals of the same function must be shorted at a pattern near the product.

Standard Circuit Diagram

Note 1: A pull-down resistor (11 k Ω typ.) is connected to the IN terminal. V_{OUT} turns "L" when a high impedance is connected to the IN terminal in series.

Note:

*1: The standard value of I_{OCP} is assumed to be a value by which the output of each Power MOS FET cuts off. When the protection circuit of OCP and TSD operates, Power MOS FETs keeps cutoff. When a signal (5V: H → 0V: L) is input to the terminal PWM, the cutoff operation will be released. Moreover, three minutes ($T_a=25^{\circ}\text{C}$, $f_{PWM}=10\text{kHz}$, $V_M=14\text{V}$) are assumed to be max at the overcurrent state continuance time in the V_M operation and the ground of output terminal (OUT1, OUT2). It is not the one to assure the operation including reliability in the state that the short-circuit continues for a long time.

*2: Output transmission time (tpLH)

Output transmission time tpLH is time from V_{th} (2.5V typ) of the terminal of PWM to output ($V_{OUT} \cdot 0.9$) of the output terminal.

*3: Output transmission time (tpHL)

Output transmission time tpHL is time from V_{th} (2.5V typ) of the terminal of PWM to output ($V_{OUT} \cdot 0.1$) of the output terminal.

*4: DIAG signal output terminal is an open collector output. Use a pull-up resistor when connecting it to a logic circuit.

- Various processing technologies of BIP, BiCMOS, CMOS and BCD can be used for the semiconductor chips.
- Meets detailed user needs, especially power ICs. A wide range of general-purpose ICs is also available.
- Employs a monolithic chip with flip-chip construction for increased reliability making it ideal for car electronic devices.
- Also available in hybrid ICs with transfer mold construction, multi-chip IC configuration and power monolithic IC configuration.

Features

- All semiconductor chips used are manufactured by Sanken.
- Main product lineup consists of power ICs produced out of many years' experience of Sanken.
- Uses monolithic chips with flip-chip construction.
- Mainly available in miniature transfer-mold packages.

Examples of Custom Hybrid IC Products

- Regulators for alternators
- Igniters
- Power supply for microcomputer system
- Power steering control IC
- Motor and actuator driver
- Others

Thyristor with built-in reverse diode for HID lamp ignition TFC561D

Features

- Repetitive peak off-state voltage: $V_{DRM}=600V$
- Repetitive peak surge on-state current: $I_{TRM}=430A$
- Critical rate-of-rise of on-state current: $di/dt=1200A/\mu s$
- Gate trigger current: $I_{GT}=20mA$ max
- With built-in reverse diode

General-purpose Diodes - Taping Specifications

Taping Specifications

Taping Name	Taping Dimensions (mm)	Packaging Dimensions (mm) and Markings	Packaging Quantity
V A suffix "V" is added to Part No. for tape packaging.	Emboss taping  (1) The cathode is on the right-hand side when viewed in the pull out direction. (2) The electrode side of the product is on the bottom when casing. (3) A leader tape of 150 to 200 mm in length is provided. (4) The leading and trailing edge of the leader tape are provided with a pitch of at least 10 mm. (5) Reversed polarity taping available on request (specify taping name "VL").	Reel  Marking of Part No., Lot No., quantity, etc.	1,800 pcs. per reel
V A suffix "V" is added to Part No. for tape packaging.	Axial taping 	Reel  Marking of Part No., Lot No. and quantity Core Flange Stopper	5,000 pcs. per reel (2.7φ body) (2.4φ body) 3,000 pcs. (4φ body)
V1 A suffix "V1" is added to Part No. for tape packaging.	Axial taping 	Ammunition (Ammo) pack Broken lines: perforations  Marking of Part No., Lot No. and quantity	2,000 pcs. per box (2.7φ body) 3000 pcs. (2.4φ body) 1000 pcs. (4φ body)
V0 A suffix "V0" is added to Part No. for tape packaging.	Axial taping 	Ammunition (Ammo) pack Broken lines: perforations  Marking of Part No., Lot No. and quantity	2,000 pcs. per box (2.7φ body) 3000 pcs. (2.4φ body)
V3 A suffix "V3" is added to Part No. for tape packaging.	Axial taping 	Reel  Marking of Part No., Lot No. and quantity Core Flange Stopper	1,500 pcs. per reel (5.2φ body)

Taping Specifications

Taping Name	Taping Dimensions (mm)	Packaging Dimensions (mm) and Markings	Packaging Quantity
V4 A suffix "V4" is added to Part No. for tape packaging.	Axial taping 	Ammunition (Ammo) pack 	1,000 pcs. per box (5.2φ body)
W A suffix "W" is added to Part No. for tape packaging.	Radial taping 	Ammunition (Ammo) pack 	4,000 pcs. per box (2.7φ body 0.6φ leads only)
WS A suffix "WS" is added to Part No. for tape packaging.	Radial taping (applies to A0 series) 	Ammunition (Ammo) pack 	2,500 pcs. per box (2.4φ body)
WK A suffix "WK" is added to Part No. for tape packaging.	Radial taping (applies to A0 series)
