### BTA212X series B

### **GENERAL DESCRIPTION**

# Glass passivated high commutation triacs in a full pack, plastic envelope intended for use in circuits where high static and dynamic dV/dt and high dl/dt can occur. These devices will commutate the full rated rms current at the maximum rated junction temperature, without the aid of a snubber.

### **QUICK REFERENCE DATA**

September 1997 1 Rev 1.200

<sup>1</sup> Although not recommended, off-state voltages up to 800V may be applied without damage, but the triac may switch to the on-state. The rate of rise of current should not exceed 15  $A/\mu s$ .

BTA212X series B

### **ISOLATION LIMITING VALUE & CHARACTERISTIC**

 $T_{hs}$  = 25 °C unless otherwise specified

| Objective specification   | This data sheet contains target or goal specifications for product development.       |  |  |  |  |
| Preliminary specification | This data sheet contains preliminary data; supplementary data may be published later. |  |  |  |  |
| Product specification     | This data sheet contains final product specifications.                                |  |  |  |  |

#### Limiting values

Limiting values are given in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of this specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

#### **Application information**

Where application information is given, it is advisory and does not form part of the specification.
