

High Performance, Dual-Axis Digital Output Accelerometer

Data Sheet ADXL288

FEATURES

±120 g full-scale range

12-bit resolution at 62.5 mg/LSB

512 kHz data interpolation rate

Sensor frequency response down to dc

On-demand electromechanical self-test

Fully differential circuitry for high resistance to EMI/RFI

Independent x- and y-axis sense structures for robust

FMEA performance

Independent x- and y-axis arming thresholds

Low noise: 1 LSB rms typical

Qualified for automotive applications Temperature range: -40°C to +105°C

3.3 V and 5 V operation

APPLICATIONS

Impact sensing Shock detection

GENERAL DESCRIPTION

The ADXL288 is a dual-axis accelerometer with signal-conditioned outputs available via a 16-bit SPI interface. Identical, independent X and Y sense structures are implemented to create a high performance, high integrity acceleration sensing system.

The X and Y acceleration channels have a nominal full-scale range of $\pm 120~g$ and a bandwidth of 408 Hz. The acceleration data is provided as a 12-bit, twos complement word with a resolution of 62.5 mg/LSB.

The ADXL288 is available in a 16-lead, narrow-body SOIC package with an exposed pad. The ADXL288 can operate at 3.3 V and 5 V and is specified for operation from -40° C to $+105^{\circ}$ C.
