10. Logic "0" = 0.0 - 0.8 V, sink current is 20 μA maximum.
11. Logic "1" = 2.0 - 5.0 V, source current is 20 μA maximum.

12. Exceeding any one or combination of these limits may cause permanent damage to this device.
13. M/A-COM does not recommend sustained operation near these survivability limits.
14. Standard CMOS TTL interface, latch-up will occur if logic signal is applied prior to power supply.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.
