

**Ternary PIN Photodiode
with Integrated Preamplifier IC****SRP00264x
SRP00265x****Features**

- InGaAs/InP PIN photodiode with preamplifier IC
- Designed for SONET OC-24 applications in fiber-optics communication systems
- Sensitive receiver for 2nd and 3rd optical window (1300 nm and 1550 nm)
- Suitable for bit rates up to 1.25 Gbit/s
- Module with high optical sensitivity
- Fast switching times
- Low dark current
- Excellent noise immunity
- High reverse current stability from planar structure
- Hermetically sealed TO46 package

Pin Configuration

Figure 1 Receiver with Preamp

Description

The Infineon optical receiver module has been designed for use in optical networks and is suitable for bit rates up to max. 2.5 Gbit/s if used without any TIA.

The optical receiver module uses a high-speed PIN photodetector optional coupled with a hybrid low noise transimpedance amplifier (PIN-TIA). The optical receiver photodiode can be used for 1310 nm or 1550 nm optical communications.

The PIN photodiode is made of InGaAs/InP and has an active diameter of 75 μm . The function of the PIN and PIN-TIA optical receiver module is to detect input optical power, to transduce the incident radiation into current (PIN) and then to convert the current into a voltage (PIN-TIA).

The low input noise current density of the used transimpedance amplifiers in PIN-TIA's provides the optical receiver module, when used with appropriate filtering, with ample sensitivity for realizing minimum input power requirements. Designers of optical receivers can use the module in any application that benefits from integration of the photodiode and TIA into a TO coaxial package. Typical for such applications are receivers for digital crossconnects, digital loop carriers, add/drop-multiplexers and optical network units.

Last but not least the fast switching times, low dark currents and the packaging in a compact and hermetically sealed TO46 make the optical receivers usable in many other fiber optic receiver applications. One application is the use in a Compact realization of a transceiver in one module like the so called BIDI® (**Figure 2**).

Technical Data
Absolute Maximum Ratings

Parameter	Symbol	Limit Values		Unit
		min.	max.	

Module

Operating temperature range at case	T_C	-40	85	°C
Storage temperature range	T_{stg}	-40	85	°C
Soldering temperature ($t_{max} = 10$ s, 2 mm distance from bottom edge of case)	T_S		260	°C

Receiver Diode

Reverse voltage	V_R		20	V
Forward current	I_F		10	mA
Optical power into the optical port	P_{port}		1	mW

The electro-optical characteristics described in the following table are only valid for use within the specified maximum ratings or under the recommended operating conditions.

Characteristics for Pin-Preamp Receivers at $T_A = 25^\circ\text{C}$, unless otherwise specified.

Preamp Characteristics

Parameter	Symbol	Limit Values			Unit
		min.	typ.	max.	

DC-Characteristics

Supply voltage	V_{CC}	4.5	5	5.5	V
Supply current	I_{CC}	35	47	65	mA

AC-Characteristics

Optical sensitivity (BER $\leq 10^{-9}$, PN23)	S	-25	-27		dBm
Linear bandwidth (-3 dB)	BW		800		MHz
Optical overload (avg.)	P_{max}		0		dBm
Transimpedance (single ended)	R_T	20	25	30	k Ω
Output resistance	R_{out}	48	60	72	Ω
Gain (differential)	G		40		V/mW
Return loss, $\lambda = 1310$ nm	RL			-27	dB

Some Eye Diagrams

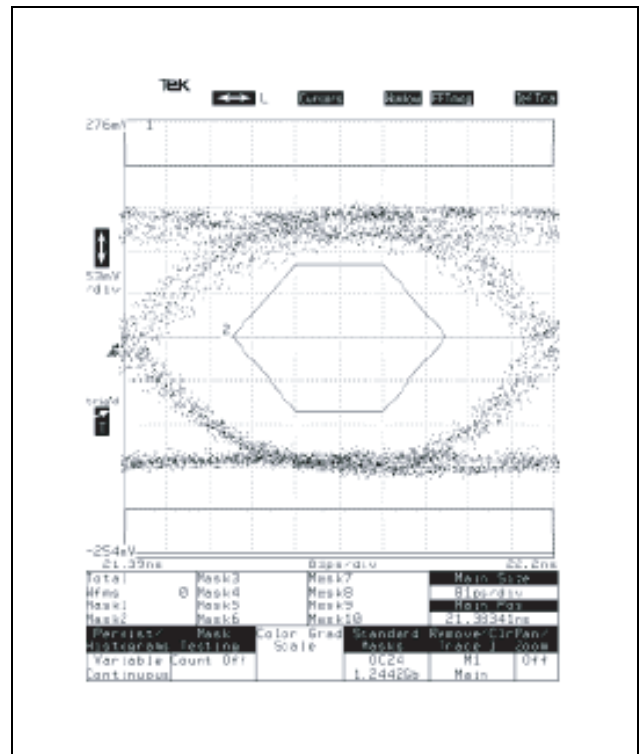

Figure 5 $P_{\text{opt}} = 10 \mu\text{W avg. (OC-24)}$

Figure 4 $P_{\text{opt}} = 100 \mu\text{W avg. (OC-24)}$

Figure 6 $P_{\text{opt}} = 500 \mu\text{W avg. (OC-24)}$

Fiber Data

The mechanical fiber characteristics are described in the following table.

Fiber Characteristics

Parameter	Limit Values			Unit
	min.	typ.	max.	
Mode field diameter		50		μm
Cladding diameter	123	125	127	μm
Mode field/cladding concentricity error			1	μm
Cladding non-circularity			2	%
Mode field non-circularity			6	%
Cut off wavelength	1270			nm
Jacket diameter	0.8		1	mm
Bending radius	30			mm
Tensile strength fiber case	5			N
Length	0.8		1.2	m

Package Outlines
