JUMO di 32 / di 08

**Digital microprocessor indicators
with 1 measurement input
and a maximum of 3 signal outputs,
case for flush-panel mounting to DIN 43 700**

Brief description

The single-channel digital indicators with the bezel sizes 48mm x 24mm and 96mm x 48mm are available for displaying measurements and monitoring limit values in industrial applications.

The configurable analog input permits the direct connection of thermocouples, resistance thermometers, resistance transmitters, potentiometers or transducers with a standard signal. The sampling rate for the measurement input is 4 measurements per second.

The indicators have a clearly legible 4-digit LED display which, depending on the version, is 10mm (JUMO di 32) or 20mm (JUMO di 08) high, and serves to display the measurements, as well as being available for dialogs. Only three buttons are used for configuration. The parameter setting is arranged dynamically, and after two seconds without any operation the value is accepted automatically.

The front protection is to IP66, at the rear IP20. The electrical connection is by plug-in screw terminals. The possible input and output configurations are shown in the following block structure.

Type 951530/...

Type 951531/...

Block structure

Features

- structured operating and programming layout
- customer-specific linearization correction
- 2 limit comparators for limit monitoring
- digital input filter with programmable filter time constant
- time-delayed switching, programmable per relay
- switch-on delay after power-on is programmable
