

Power Transformers

and Design/Build **Custom Magnetics** Capability

Hundreds of standard-model power transformers. Nearly limitless custom-design choices.

A wide selection of standard-model power transformers; see pages 4 through 13 of this catalog.

Thru-hole pc-mount, surface-mount, low-profile, vertical and horizontal. chassis mount.

Bobbin wound ferrites, #14 -- #46 ga wire.

Custom laminated, hermetically sealed, encapsulated, custom terminals and mounting, MIL-STD-1553 pulse transformers, Fiber Channel transducers.

The hundreds of catalog power transformers described in this catalog (pages 4 through 13) make up just a small portion of the magnetic solutions available to you from Pulse Specialty Components. Our custom design library includes hundreds of power and signal magnetic components built to unique customer requirements.

Does the transformer you require closely resemble but differ slightly from one of our standard models? Chances are we've built it before, and can quickly do so again. A quick modification might include any of the following:

- Frequencies up to 500 kHz
- Special input and output voltages
- Custom termination: connector, lead, line cord, lug
- Optional mounting: surface mount or thru-hole technology; chassis mount, angle bracket, welded plate
- PC-board mounts using square, round or rectangular pins; custom pinout configurations

Perhaps your application calls for more than a modification. And you can't design it yourself without knowing the best alternatiives. We do. Custom design is a Pulse Specialty Component strength. Special-purpose bobbins, epoxy encapsulation, insulation, magnetic wire, terminations-- all are at our disposal and we build to suit -- to your requirements and to those of CSA, UL, VDE, and applicable MIL specifications.

Once designed, we build our custom transformers by the scores, hundreds, or thousands, in any of five ISO 9000 approved manufacturing facilities located in the US and abroad. Just as you need, we design, build, and ship your custom Pulse Specialty products on schedule, quickly and economically.

We also design and build subassemblies -practically any component that involves a core and a winding. On the power side up to 12-gage wire and 1 kVa; on the signal side down to 46gage wire and serving application frequencies beyond 1 GHz.

What we do best.

Few manufacturers can compete successfully in both low-quantity custom and high-quantity areas. Manufacturers typically do one or the other well. Pulse Specialty Components does both well thanks our domestic and offshore design and manufacturing resources.

It all starts here, with extensive design engineering capability and well established domestic manufacturing accustomed to building to commercial, MIL, avionics, and space application requirements. Domestically, we're well-equipped to fill low- to mid-volume standard-part and custom orders and to perform quick modifications of standard parts. For higher-volume requirements, our design engineers shake hands with our manufacturing engineers in any of three offshore ISO 9000 manufacturing facilities owned and operated by Pulse.

The result is a rare combination: accessible and talented customer service people and design engineers supported by **a choice of** manufacturing facilities worldwide.

Domestic or offshore, our prototyping, pricing, scheduling, and delivery come together as if we were all in the same facility.

- Accessible, experienced design services.
- Rapid modification of standard models.
- Quick design/build of fully custom magnetics.
- Low- and high-volume manufacturing.
- Excellent pricing over a broad range of supply requirements.

Current transformer modules. MIL/high rel and commercial. One- and three-phase. Custom mounting.

Assorted custom magnetic components and configurations.

Wound toroids, 0.5 to 3 in. OD #8 awg -- #46 awg

Vertical-mount toroids.
Thru-hole and surface-mount.

TABLE OF CONTENTS

Pulse Specialty Components reserves the right to make changes without notice.

These transformers are built on dual bobbins with insulating shrouds to provide 4000V RMS isolation between primary and secondary. Non-concentric construction reduces primary-to-secondary capacitance and eliminates the need for an electrostatic shield.

FEATURES

- PC board plug-in mounting
- Double reinforced insulation
- Dual bobbin; high (4000V) isolation
- Non-concentric design -- eliminates ESS
- No crossover contact between primary and secondary leads
- Vacuum impregnated -- withstands board washing systems and reduces audible noise
- Baked resin -- provides fully cured and environmentally resistant finish
- May be connected in series or parallel

AGENCY APPROVALS

- UL 506, File E73539
- UL Recognized Class B
- UL 1446, File E80130
- CSA 22.2#66, File LR68051-2

Primary Ratings:	"ST" 115V 50/60 "DST" 115/230V 50/60	Hz 8-pin

Split-bobbin: primaries and secondaries are wound side-by-side rather than concentrically to obtain the benefits listed below.

FEATURES

- High (2500V) isolation; 2500V RMS HIPOT
- Non-concentric design -- eliminates ESS
- No crossover contact between primary and secondary leads
- Vacuum impregnated -- withstands modern board washing systems and reduces audible noise
- Baked resin -- provides fully cured and environmentally resistant finish
- Rugged construction -- no additional mounting hardware
- Universal design -- compatible with industry-standard footprints
- Available in single or dual primary
- Secondaries can be connected in series or parallel

AGENCY APPROVALS

(Other primary ratings available on request.)

Low Profile Plug-in Transformers

for limited-space PC board applications

These low-profile plug-in power transformers are wound in a semitoroidal configuration to minimize both EMI and unit height. They are designed for low-height critical pc board applications in semiconductor control and instrumentation and for use in single, dual, or reference dc supplies and isolated control circuits. Available in five sizes.

FEATURES

- Low height profile
- 1500V RMS HIPOT
- Vacuum impregnated -- withstands modern board washing systems and reduces audible noise for quiet operation
- Baked resin -- provides fully cured and environmentally resistant finish that will not peel or flake
- Sizes 2, 6, and 12 are available as encapsulated and hermetically sealed (request drawings).

FEATURES

- UI design -- increases power/height ratio
- Side-by-side design -- lowers interwinding capacitance
- Semi toroidal construction -- reduces magnetic fields and EMI
- Greater surface area -- more uniform heat dissipation
- Solder lug terminals -- for rugged field applications
- UL recognized, 506, File E73539, Class B (130°)
- Available in five sizes
- 1500V HIPOT
- Baked resin -- provides fully cured and environmentally resistant finish that will not peel or flake

NON-STANDARD RATINGS -- Tapped primaries, secondaries of different voltages, currents or frequencies can be furnished.

Pulse Specialty Components reserves the right to make changes without notice.

Triple-output Low Profile Humbucking Transformers

Designed around our Series LP transformers, MPL transformers are rated in terms of final DC output after regulation by a 3-terminal IC regulator. 1500V HIPOT is standard.

These transformers are designed for pc board power isolation and for applications that require triple-output regulated supplies for microprocessor applications.

- Primary 115/230 Volt, 50/60 Hz
- 5V and 12V or 15V outputs

Size	VA	L	W	Н	Α	В	С	weight (lb)

Concentric and Split Bobbin Vertical Profile Plug-in Transformers

for PC board power isolation

- PC Series Concentric Vertical Mount models provide operation frequencies from 47 to 500 Hz. Isolation between primary and secondary 1500V.
- EL Series Split Bobbin Vertical Mount models are available with a 50/60 Hz primary. Isolation between primary and secondary 2500V. Non-concentric design eliminates ESS.
- PC AND EL SERIES have the same dimensions and schematics, are available in the same sizes and mounting styles, and share the same general features listed below.

FEATURES

- Vacuum impregnated -- withstands modern board washing systems and reduces audible noise for quiet operation
- Baked resin -- provides fully cured and environmentally resistant finish that will not peel or flake
- Rugged construction
- Universal design compatible with industry-standard footprints
- Available in single or dual primary
- Secondaries may be connected in series or parallel
- Formtran enclosed potted unit available. See model code.

AGENCY APPROVALS

Triple Output Vertical Profile Plug-in Transformers (Series MPC)

Designed around our Series PC transformers, MPC transformers are rated in terms of final DC output after regulation by a 3-terminal IC regulator. 1500V HIPOT is standard.

These transformers are designed for pc board power isolation and for applications that require triple-output regulated supplies. Often used for microprocessor applications.

quick connect or hard wiring; high isolation

Split-bobbin: primaries and secondaries are wound side-by-side rather than concentrically to obtain the benefits listed below.

FEATURES

- Channel frame mounting
- Split bobbin. High (2500V) isolation. 2500V RMS Hipot
- Non-concentric design -- eliminates ESS
- No crossover between primary and secondary winding leads
- Vacuum impregnated -- withstands modern board washing systems and reduces audible noise
- Baked resin -- provides fully cured and environmentally resistant finish
- Available in single or dual primary
- Center tapped secondary offers dual outputs
- Terminals suitable for either hard wiring or quick connect

AGENCY APPROVALS

- UL, 506, File E73539
- UL 1446, File E80130
- CSA 22.2#66, File LR68051-2
- UL Recognized Class B

Triple-output CHASSISTRAN Power Transformers

Designed around our Chassis Tran Series transformers, MT and DMT transformers are rated in terms of final DC output after regulation by a 3-terminal IC regulator. 2500V HIPOT is standard.

These transformers are designed for power isolation applications requiring triple output regulated supplies used in microprocessor applications.

- Primary 115V or 115/230V, 50/60 Hz
- 5V and 12V or 15V outputs

FEATURES

- Channel frame mounting
- Split bobbin; high (2500V) isolation; 2500V RMS HIPOT
- Non-concentric design -- eliminates ESS
- No crossover of primary and secondary leads
- Baked resin -- provides fully cured and environmentally resistant finish
- Available in single or dual primary
- Terminals suitable for either hard wiring or quick connect

MIL-STD-1553 data bus couplers

Pulse Specialty Components single and multi-stub MIL-STD-1553 data bus couplers range from lightweight and compact models for aircraft to heavy duty models used in the M1A2 tanks. Ruggedly constructed full-military models include our fully tested MIL-PRF-21037/27 coupling transformers inside. Economical couplers for bench-test and other COTs applications also available. Custom designs encompass a wide selection of connectors and box configurations. Standard (to specification) and custom testing is available over a wide range of temperature, vibration, EMI, and other conditions.

MIL-PRF-21038/27 pulse transformers

As "Technitrol Components Division," we were the first to achieve QPL status for MIL-STD-1553B interface transformers. Our comprehensive QPL transformer product line recently increased substantially in size to accommodate the new three-tier product levels called for by MIL-PRF-21038/27.

We also were the first to achieve QPL status on surface-mount MIL-STD-1553 pulse transformers. To this day, many manufacturers experience difficulties producing components that can survive the high-heat rigors of surface mounting and still provide the performance, reliabliability, part-to-part repeatibility, and lifespan required by high-rel military and commercial applications.

Custom models include low-profile single and dual, vertically-stacked dual, and hermetically sealed transformers. Special test regimens and custom marking.

Delay lines

One of the most extensive selections of active and passive delay lines for military, industrial and commercial applications. We are an approved QPL listed supplier for MIL-PRF-83531 and MIL-PRF-83532. Our active delay lines can be manufactured with integrated circuits from several logic families screened to MIL-STD-883. Many delay lines are available in various package styles including single in line (SIP), dual in line (DIP) and a wide variety of surface mount configurations.

High Frequency Balun Adapter for 150-ohm Fibre Channel, 100-ohm Gigabit Ethernet, and 78-ohm high-speed 1553.

These wide-band baluns provide the impedance matching and isolation necessary to interface a 50-ohm grounded test instrument with a differential circuit under test. They convert a balanced differential-mode signal to a grounded unbalanced 50-ohm signal with less than 2 dB insertion loss and greater than 15 dB return loss from 1.0 MHz to 1.2 GHz. This permits accurate and repeatable measurements of signal quality, such as insertion loss, transmission loss, and return loss. Each balun has a terminator network and correlation data for periodic calibration verification. Terminal pins to connect the network under test to the balun are included.

Fibre Channel and CMI line interface products for today's fastest LAN and WAN applications.

Bi-directional fiber (NRZ) to copper (CMI) converter

Built for E4/STM-1/OC3 applications to conduct bi-directional cross media data, voice, and video communications at fiber speed data rates. These modules provide all connections and signal conditioning for NRZ/CMI network junctions Besides the signal connections, all that is required is 12Vdc power. Very low transmit/receive jitter. Loss of signal detection. Maximum operating distance exceeds 200 meters on 75 ohm RG-6/u and RG-11/u coaxial cable. Compact and easy to install.

SONET/SDH (CMI) serial line interface modules (LIM)

Compact, one-package line interface units for interfacing to the most widely used SONET/SDH chip sets for E4/STM-1 applications.

CMI transceiver line interface modules offer a convenient, one package, high performance solution for the complex chip interfacing requirements of CMI applications. The compact packages include transformer coupling for both T_X and R_X functions, an equalizer, a differential amplifier, and buffering for ECL level input and output. Designed to be inter-operable with existing ECL fiber transceiver drivers, the transceivers meet SONET/ITU-T requirements for coded mark inversion (CMI) data transmission over copper. The transceivers function equally well in both 311.04 Mb/s SONET STM-1 CMI and 278.528 Mb/s SONET E4 CMI applications, delivering fiber speed data transmission and reception over more than 200 meters of 75 ohm RG-6/u or RG-11/u coaxial cable.

Fibre Channel serial line interface modules (LIM)

Designed to be inter-operable with existing ECL fiber transceiver drivers, these fibre channel copper transceiver line interface modules drive high frequency (fiber speed) signals over copper media and offer high clarity over extended distances.

Passive (non-buffered) transceiver models serve short haul applications of 10 to 30 meters over shielded twisted pair (STP), twinax, mini coax, or video coaxial cable.

Active models with buffered "receive" are built for long haul applications where losses accumulate and diminish (receive) signal strength. Active models require a minimum input signal of only 100 mV (from cable) to transceiver R_X .

Two-way active models with buffered "receive" and buffered "transmit" are used in long haul applications to recondition the signal to theappropriate drive level. Transmitter output signal level is 1100 mV minimum. Achieve fiber speed data and communications over 100+ meters of copper.

Fibre Channel (SAN) dual transformers

Designed specifically for point-to-point coupling to 150 ohm twinax cable. The isolation transformers protect the station from static charges that may develop on the cable and prevents ground loop currents from being transferred between stations. The devices have also been designed to provide common mode rejection within the transmission band and thus reduce EMI.

The wide bandwidth of these devices minimizes data dependent jitter by providing fast signal rise times. Low-end bandwidth also minimizes base-line wander, another contributor to jitter. The dual package allows connection of both the transmit and receive channel.

WARRANTY

Pulse Specialty Components warrants for a period of 90 days from the date of shipment, that under normal use and service, its products will be free from defects in workmanship and material. Pulse Specialty Components' sole responsibility under this warranty is, at its option, to repair or replace, without charge, any defective product or part, or to credit buyer for the purchase price of such defective product, provided:

- 1) Buyer promptly notifies Pulse Specialty Components in writing within the warranty period, and
- The defective product or part is returned to Pulse Specialty Components with transportation charges prepaid by Buyer, and
- 3) Pulse Specialty Components examination of such product shall disclose to its satisfaction that said defect exists and has not been caused by misuse, neglect, improper installa tion, repair or alteration, or accident.

EXCEPT FOR THE ABOVE WARRANTY AND THE IMPLIED WARRANTY OF TITLE, PULSE SPECIALTY COMPONENTS MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. NO LIABILITY IS ASSUMED FOR EXPENDABLE ITEMS SUCH AS LAMPS AND FUSES. PULSE SPECIALTY COMPONENTS WILL NOT BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES UNDER ANY CIRCUMSTANCES.
