- (1) Open Circuit Inductance Test Parameters: 100kHz, 0.1V, 0.0Adc.
- (2) Irms: DC current for an approximate  $\Delta T$  of 40°C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed 125°C under worst case operating conditions verified in the end application.
- (3) Isat Amperes peak for approximately 30% rolloff (@25°C)

- (4) K-factor: Used to determine B p-p for core loss (see graph). B p-p =  $K^*L^*\Delta I$ , B p-p(mT), K: (K factor from table), L: (Inductance in uH),  $\Delta I$  (Peak to peak ripple current in Amps).
- Part Number Definition: SD53-xxx-R

SD53 = Product code and size; -xxx = Inductance value in uH; R = decimal point; If no R is present, third character = # of zeros.

-R suffix = RoHS compliant
