

## DM74ALS573B

# Extended Temperature Octal D-Type Transparent Latch with 3-STATE Outputs

### General Description

These 8-bit registers feature totem-pole 3-STATE outputs designed specifically for driving highly-capacitive or relatively low-impedance loads. The high-impedance state and increased high-logic-level drive provide these registers with the capability of being connected directly to and driving the bus lines in a bus-organized system without need for interface or pull-up components. They are particularly attractive for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

The eight latches of the DM74ALS573B are transparent D-type latches. While the enable (G) is HIGH the Q outputs will follow the data (D) inputs. When the enable is taken LOW the output will be latched at the level of the data that was set UP.

A buffered output control input can be used to place the eight outputs in either a normal logic state (HIGH or LOW logic levels) or a high-impedance state. In the high-impedance state the outputs neither load nor drive the bus lines significantly.

The output control does not affect the internal operation of the latches. That is, the old data can be retained or new data can be entered even while the outputs are OFF.

### Features

- Switching specifications at 50 pF
- Switching specifications guaranteed over full temperature and  $V_{CC}$  range
- Advanced oxide-isolated, ion-implanted Schottky TTL process
- Functionally equivalent with DM74LS373
- Improved AC performance over DM74LS373 at approximately half the power
- 3-STATE buffer-type outputs drive bus lines directly

### Ordering Code:

| Order Number  | Package Number | Package Description                                                       |
|---------------|----------------|---------------------------------------------------------------------------|
| DM74ALS573BWM | M20B           | 20-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-013, 0.300 Wide |
| DM74ALS573BSJ | M20D           | 20-Lead Small Outline Package (SOP), EIAJ TYPE II, 5.3mm Wide             |
| DM74ALS573BN  | N20A           | 20-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300 Wide     |

Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

## Function Table

| Output Control | Enable G | D | Output Q       |
|----------------|----------|---|----------------|
| L              | H        | H | H              |
| L              | H        | L | L              |
| L              | L        | X | Q <sub>0</sub> |
| H              | X        | X | Z              |

L = LOW State  
H = HIGH State  
X = Don't Care  
Z = High Impedance State  
Q<sub>0</sub> = Previous Condition of Q

## Logic Diagram

**Absolute Maximum Ratings**(Note 1)

|                                      |                 |
|--------------------------------------|-----------------|
| Supply Voltage                       | 7V              |
| Input Voltage                        | 7V              |
| Voltage Applied to Disabled Output   | 5.5V            |
| Operating Free Air Temperature Range | 0°C to +70°C    |
| Storage Temperature Range            | –65°C to +150°C |
| Typical $\theta_{JA}$                |                 |
| N Package                            | 56.0°C/W        |
| M Package                            | 75.0°C/W        |

**Note 1:** The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Recommended Operating Conditions**

| Symbol   | Parameter                      | Min | Nom | Max  | Units |
|----------|--------------------------------|-----|-----|------|-------|
| $V_{CC}$ | Supply Voltage                 | 4.5 | 5   | 5.5  | V     |
| $V_{IH}$ | HIGH Level Input Voltage       | 2   |     |      | V     |
| $V_{IL}$ | LOW Level Input Voltage        |     |     | 0.8  | V     |
| $I_{OH}$ | HIGH Level Output Current      |     |     | –2.6 | mA    |
| $I_{OL}$ | LOW Level Output Current       |     |     | 24   | mA    |
| $t_W$    | Width of Enable Pulse, HIGH    | 10  |     |      | ns    |
| $t_{SU}$ | Data Setup Time (Note 2)       | 10↓ |     |      | ns    |
| $t_H$    | Data Hold Time (Note 2)        | 7↓  |     |      | ns    |
| $T_A$    | Free Air Operating Temperature | 0   |     | 70   | °C    |

**Note 2:** The (↓) arrow indicates the negative edge of the enable is used for reference.

**Electrical Characteristics**

over recommended operating free air temperature range. All typical values are measured at  $V_{CC} = 5V$ ,  $T_A = 25^\circ C$ .
