LDC1000/LDC1001/LDC1041/LDC1051 Evaluation Module

User's Guide

Literature Number: SNAU150B
September 2013–Revised November 2019

LDC1000/LDC1001/LDC1041/LDC1051 Evaluation Module

1.1 Overview

The LDC10xx Evaluation Module is designed to provide an example LC tank and coil structure application which interfaces to a host computer. The module can be used independently of the GUI by the on-board embedded LED, which demonstrates threshold detection.

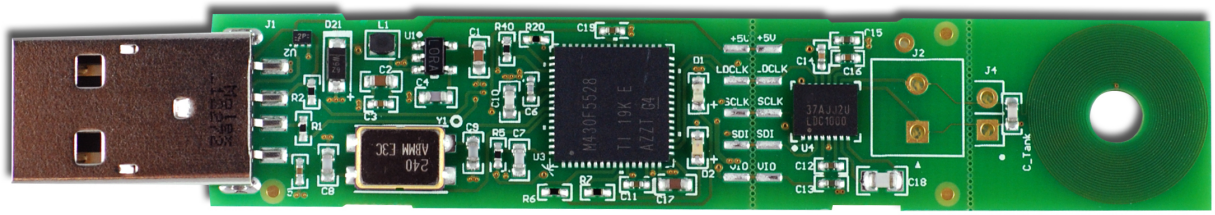

Figure 1-1. Evaluation Module

The EVM includes an example PCB sensor which is a 2 layer, 23 turn, 14mm diameter inductor with a 100pF 1% NP0 capacitor connected in parallel to form an LC tank.

The EVM is perforated at two locations to provide the option to interface to various system configurations. The first perforation, between the coil and the LDC10xx, can be used to snap off the PCB coil and connect a custom coil. The second perforation is between the LDC10xx and the MSP430, and provides the option to connect the LDC10xx and the sensor to a different system or to use multiple sensors in one system for prototyping.

Figure 1-2. LDC1000+Sensor

When the evaluation module first powers up from the USB port, it will flash a series of green and red LED lights to indicate self-test. When the self-test is finished, the green LED indicates the status of the LDC10xx INTB pin. When the INTB pin is asserted, the green LED is lit. By default, INTB is configured for threshold detection.

1.2 Sensing Solutions EVM GUI

The Sensing Solutions EVM GUI provides direct device register access, user-friendly configuration, and data streaming.

Copyright © 2013–2019, Texas Instruments Incorporated

1.2.1 System Requirements

The host machine is required for device configuration and data streaming. The following steps are necessary to prepare the EVM for the GUI:

- The GUI and EVM driver must be installed on a host computer
- - The EVM must be connected to a full speed USB port (USB 1.0 or above)

The Sensing Solutions EVM GUI supports the following operating systems (both 32-bit and 64-bit):

- Windows XP
- Windows 7
- Windows 8 and 8.1
- Windows 10

1.2.2 Installation Instructions

The Sensing Solutions GUI and EVM driver installer is packaged in a zip file. Follow these steps to install the software:

1. Download the software ZIP file from the EVM tool page
2. Extract the downloaded ZIP file
3. Run the included executable
4. If prompted by the User Account Control about making changes to the computer, click "Yes"

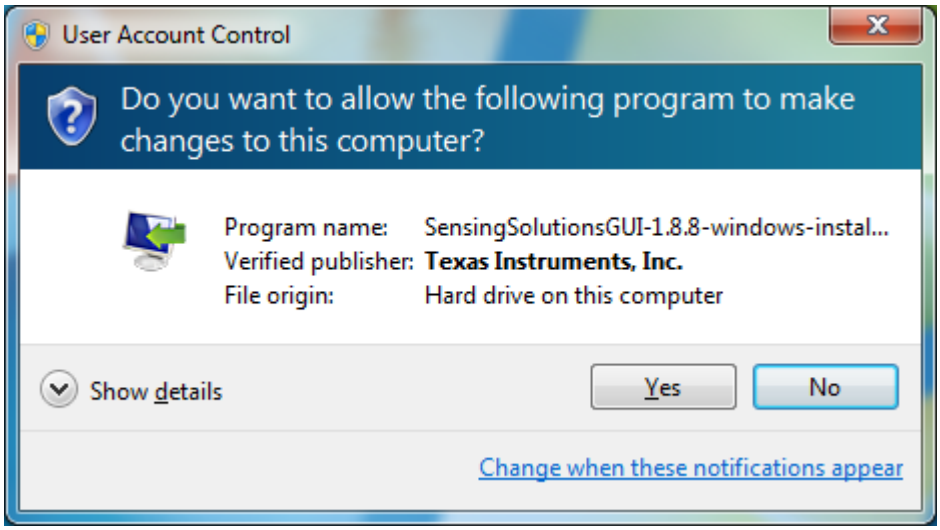

Figure 1-3. User Account Control Prompt

5. After the setup wizard starts, click "Next"

Copyright © 2013–2019, Texas Instruments Incorporated

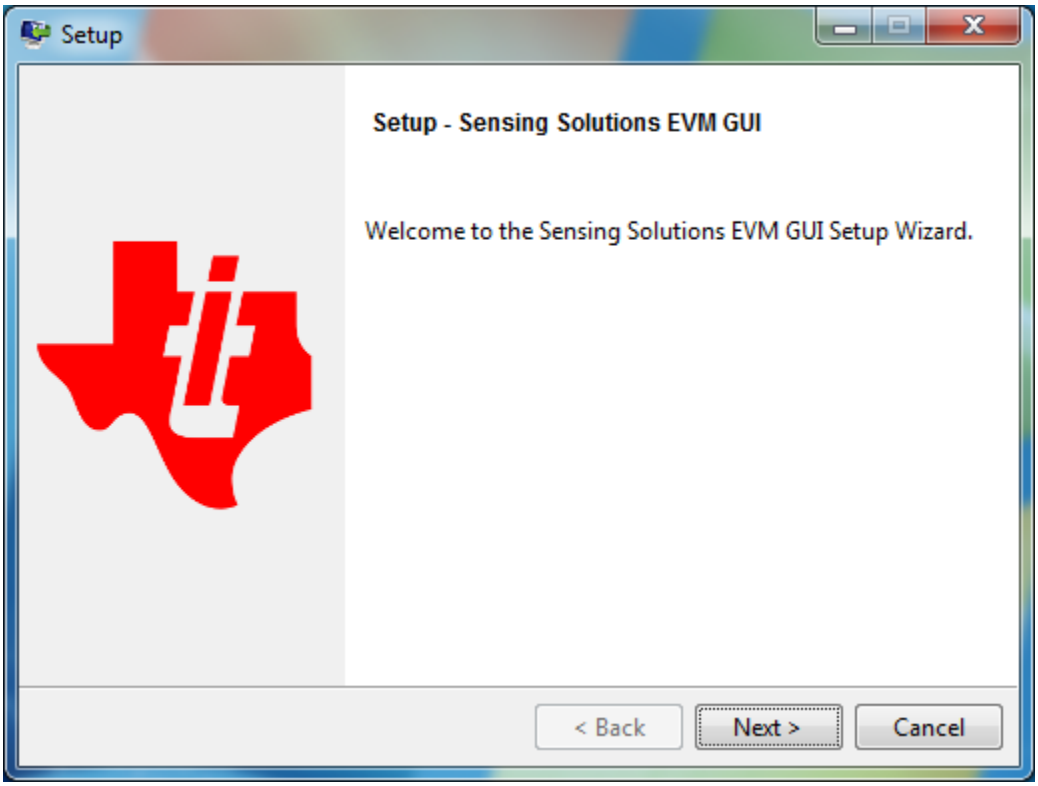

Figure 1-4. Software Installer Wizard

6. Read the license agreement, select "I accept the agreement", and click "Next"

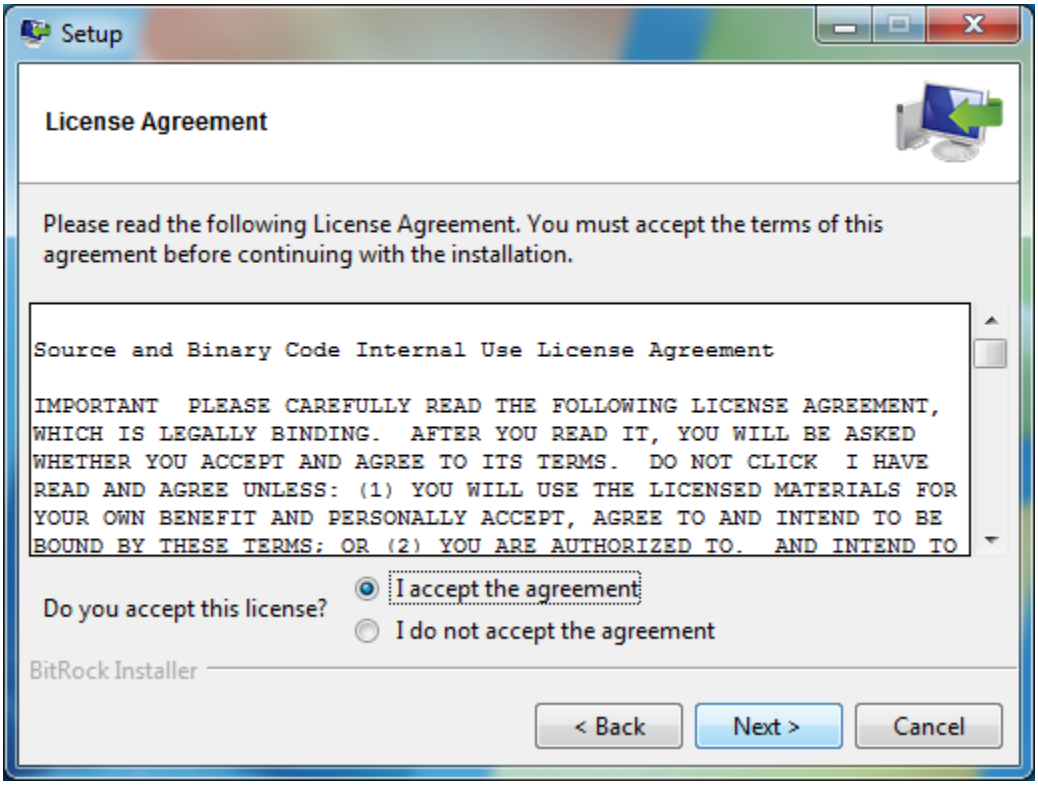

Figure 1-5. Software Installer License Agreement

Copyright © 2013–2019, Texas Instruments Incorporated

7. Use the preselected installation directory and click "Next"

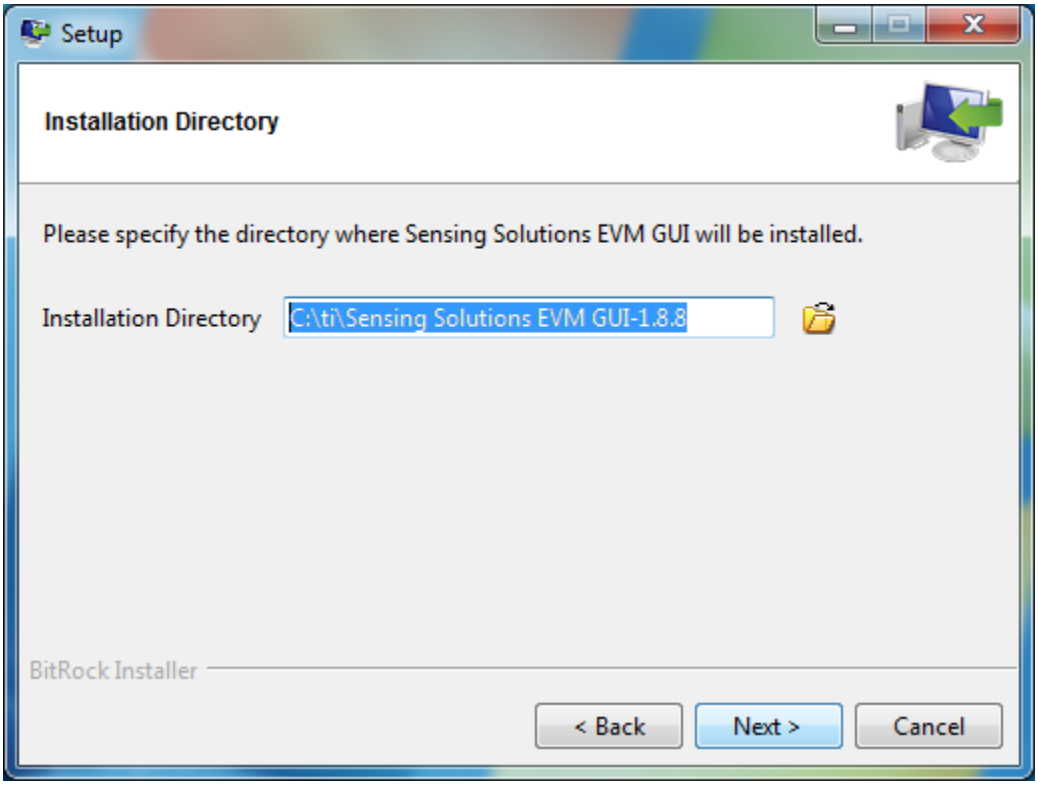

Figure 1-6. Software Installation Directory

8. Start the installation by clicking "Next"

1.2.3 Starting the GUI

Follow these steps to start the GUI:

1. Select the Windows start menu
2. Select "All programs"
3. Select "Texas Instruments"
4. Select "Sensing Solutions EVM GUI"
5. Click "Sensing Solutions EVM GUI"
6. Splash screen will appear for at least two seconds

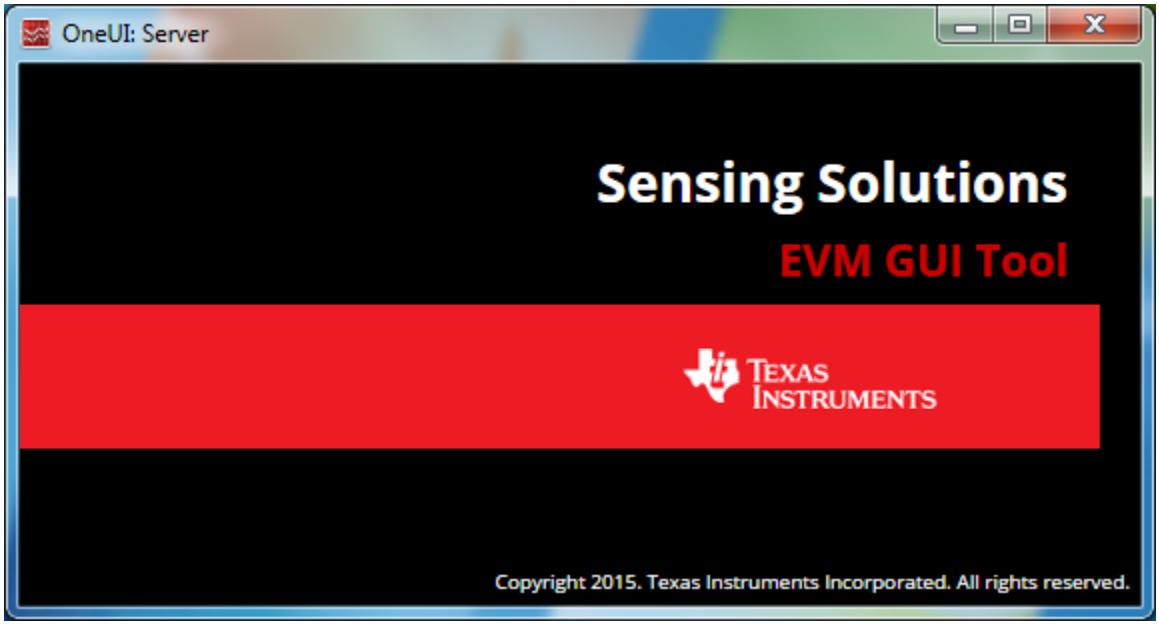

Figure 1-13. Splash Screen

7. After the splash screen is displayed the main window will open

Copyright © 2013–2019, Texas Instruments Incorporated

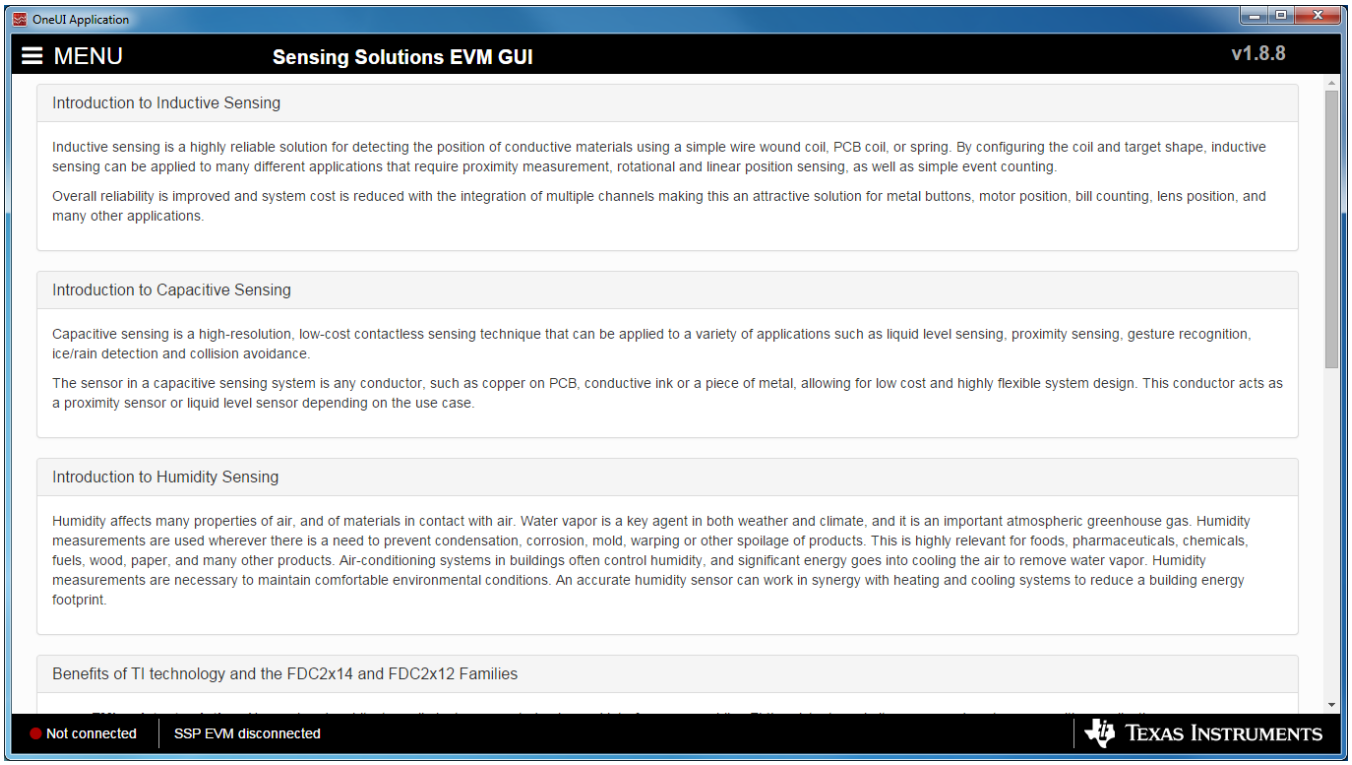

Figure 1-14. Introduction Page

1.2.4 Navigating the GUI

To navigate to different pages of the GUI follow these steps:

1. Click “Menu” in the upper left corner

Copyright © 2013–2019, Texas Instruments Incorporated

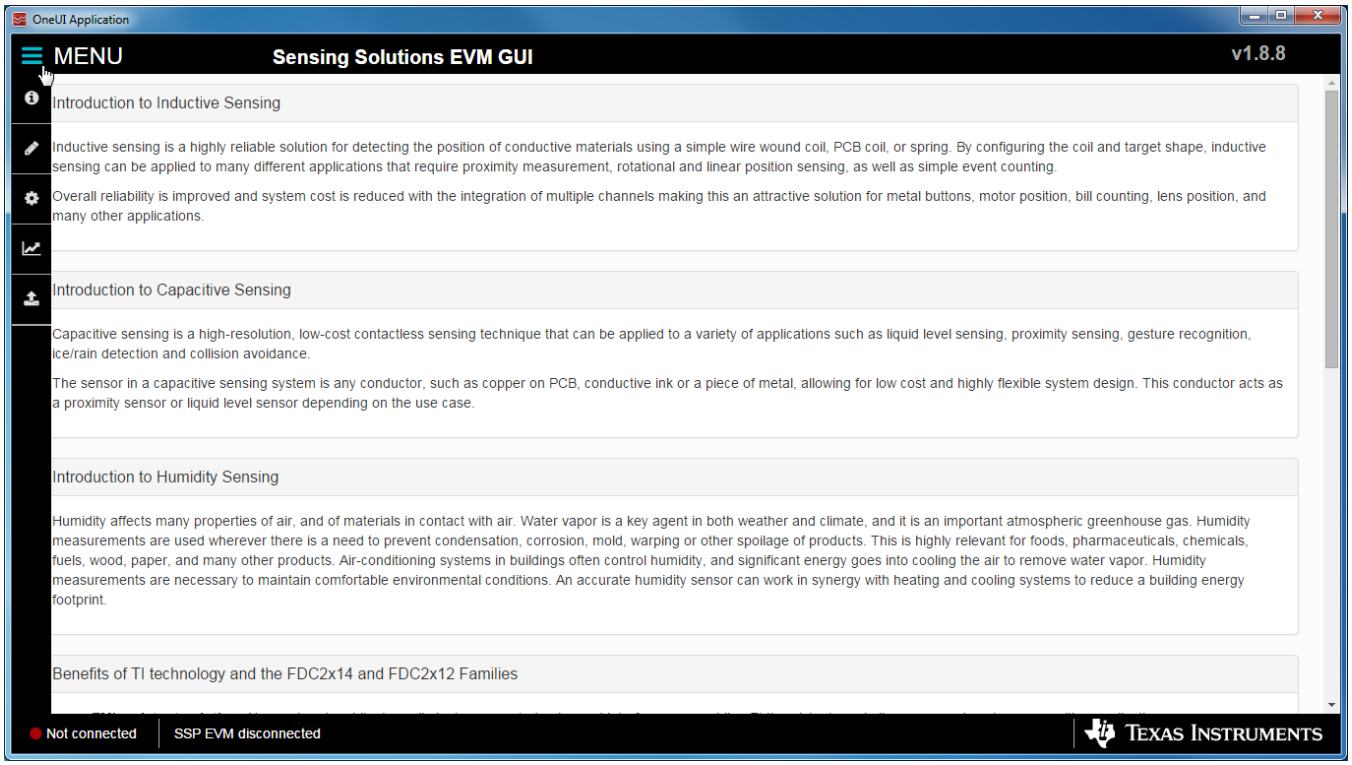

Figure 1-15. Mouse Hovered Over Menu Button

2. Select the desired page from the menu shown on the left

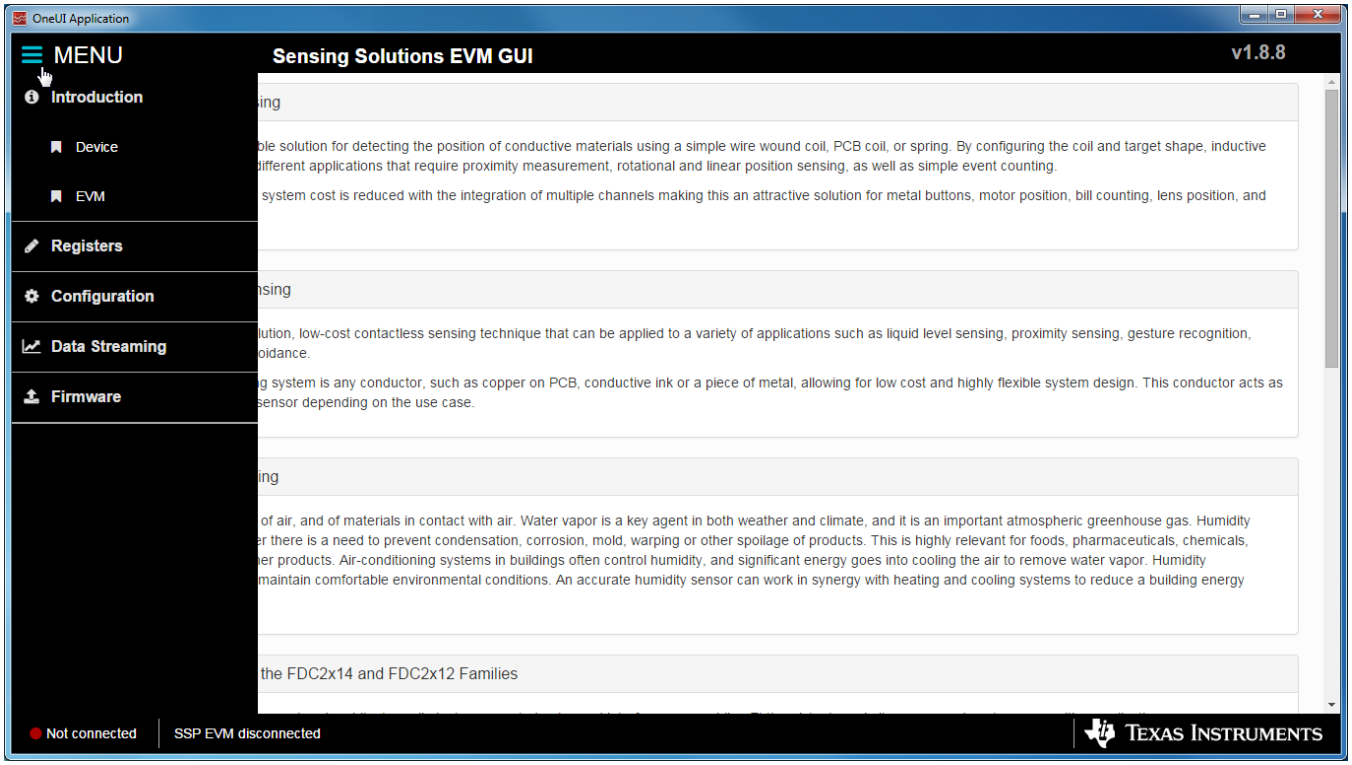

Figure 1-16. Menu Display After Clicking Button

Copyright © 2013–2019, Texas Instruments Incorporated

1.2.5 Connecting the EVM

Follow these steps to connect the EVM to the GUI:

1. Attach the EVM to the computer via USB
2. The GUI always shows the connection status on the bottom left corner of the GUI

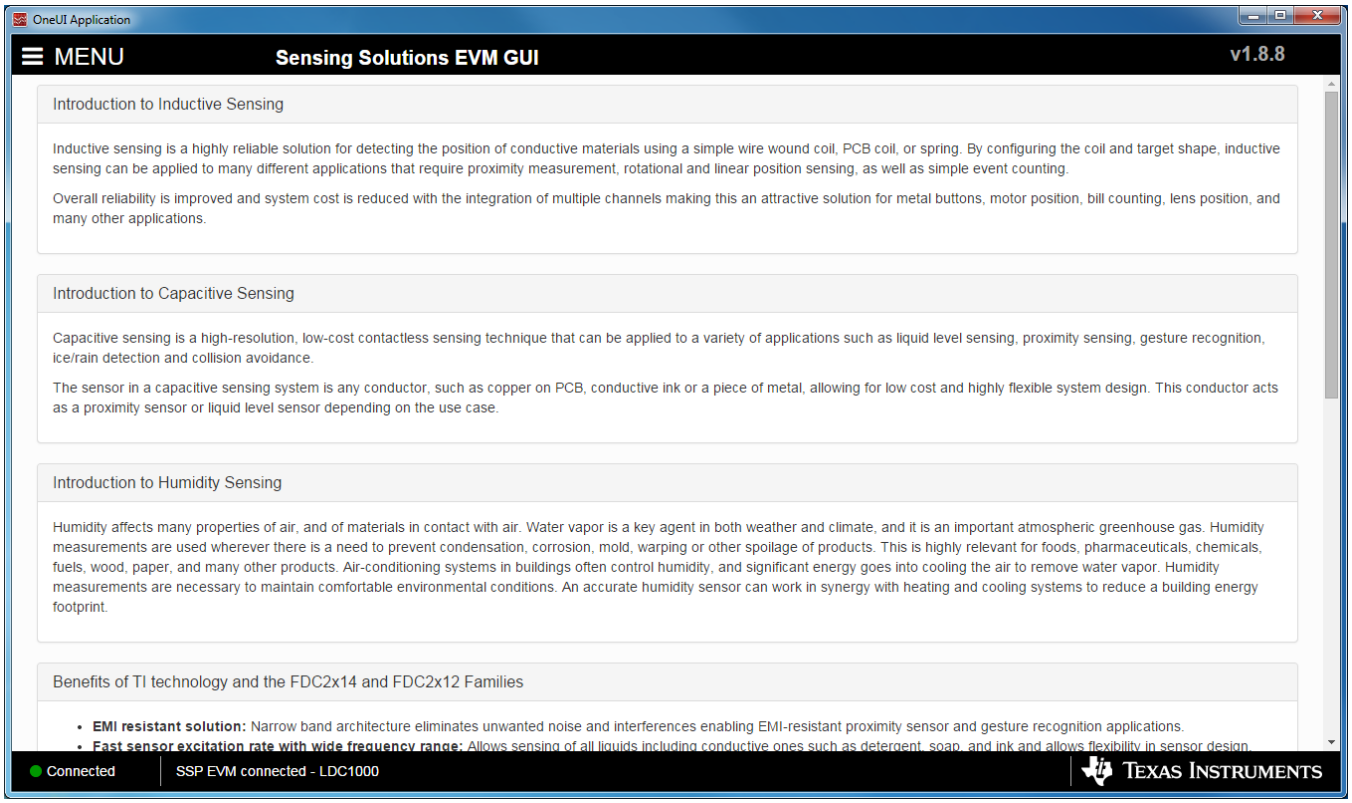

Figure 1-17. EVM Connected to GUI

1.2.6 Configuring the EVM Using the Register Page

The register page allows users to control the device directly with the register values. The user may also use this page to read the currect register values on the device.

1.2.6.1 Automatically Update GUI Register Values Using Auto-Read

Autoread will periodically request the register values on the device. Click the dropdown box next to “Auto Read” to select the update interval.

Copyright © 2013–2019, Texas Instruments Incorporated

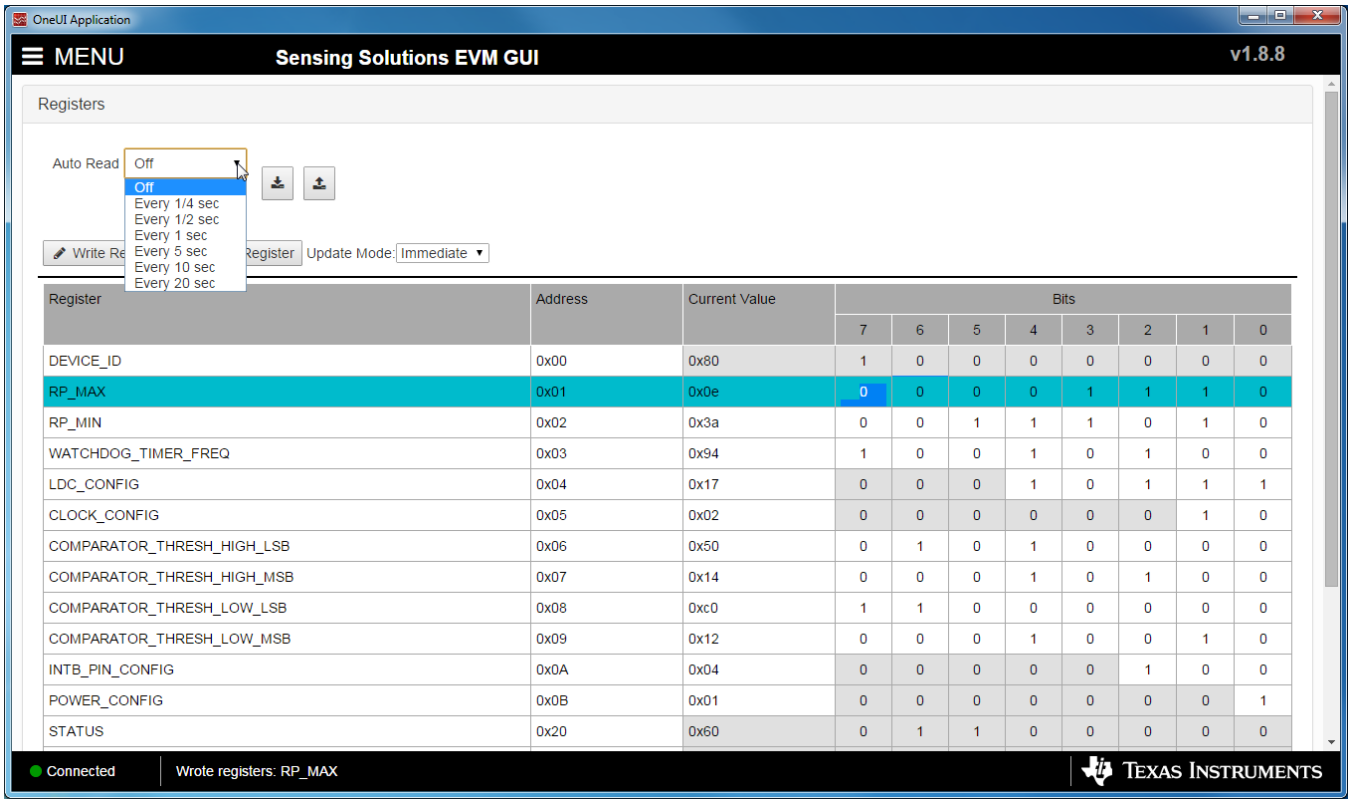

Figure 1-18. Selecting Auto-Read Interval on Register Page

1.2.6.2 Manually Update Device Register Values

There are two methods to change register values: update the entire register value or change a single bit within the register. The recommended update mode is always “Immediate” and not “Deferred”. To update register values, follow these steps.

1. Double-click the current value of the register that needs to be changed. The text will turn into an editable text box

Figure 1-19. Selecting a Register's Current Value for Editting on Register Page

2. Type the new hexadecimal value into the box and click enter. The text box changes to normal text and the GUI will send a command to the EVM to update the device register

To change individual bit values rather that entire register values follow these steps.

1. Hover the mouse over the desired bit to change

Figure 1-24. Loading Previously Saved Register Values from File on Register Page

2. Select the JSON file with the desired settings and click “Open”

1.2.7 Configuring the EVM Using the Configuration Page

The Sensing Solutions GUI is capable on configuring the device more intuitively than the direct register values. The "Configuration" page provides an easy-to-use tool for updating the device configuration and provides additional information about how the device will perform.

Copyright © 2013–2019, Texas Instruments Incorporated

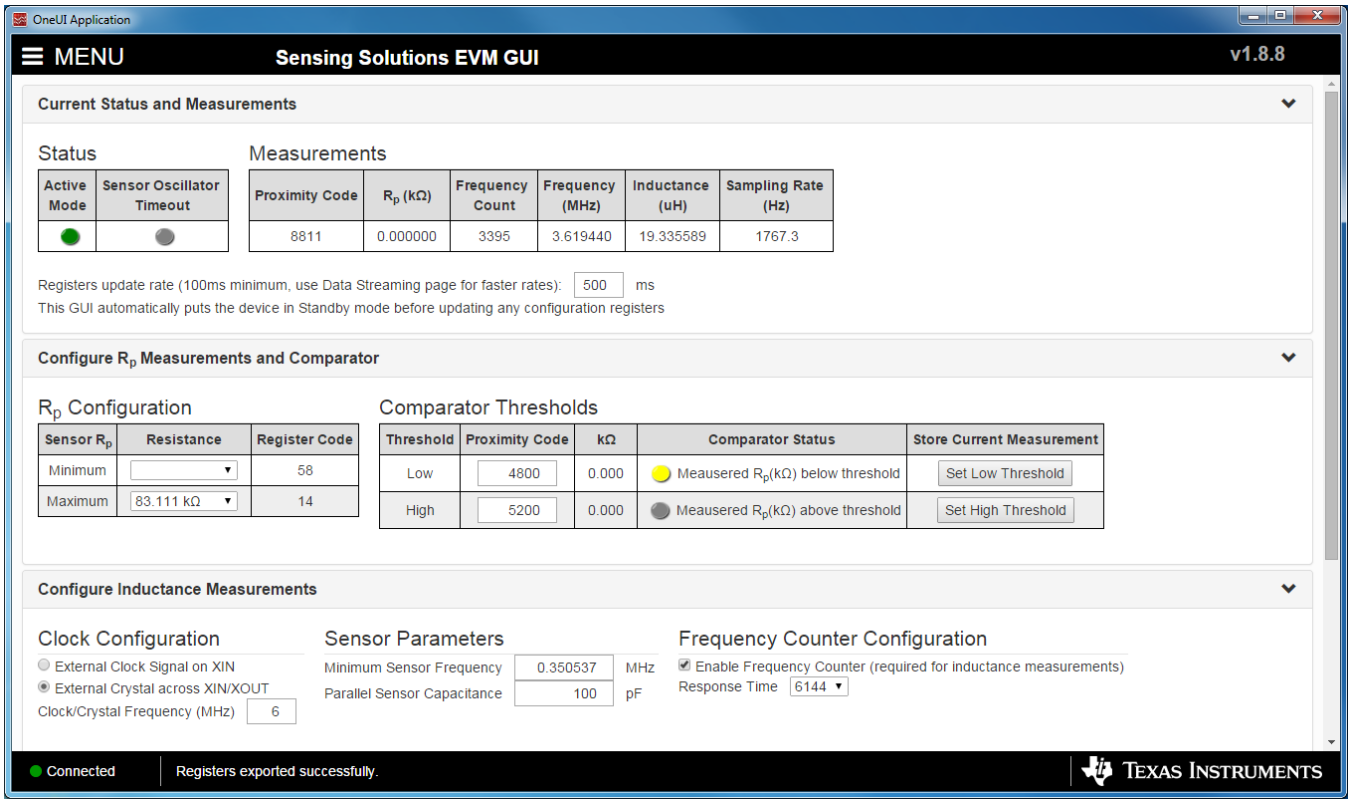

Figure 1-25. Sensor Properties and Input Adjustments on Configuration Page

1.2.8 Streaming Measurement Data

The Sensing Solutions GUI and EVM provide a tool to capture, display, and log measurement data. The section describes how to use the data measurement tools from the "Data Streaming" page accessible from the GUI menu.

1.2.8.1 Choosing the Graph and Visible Channels

Select the drop down menu on top of the y-axis to choose the graph to display.

Copyright © 2013–2019, Texas Instruments Incorporated

Figure 1-26. Select the Data Graph on Data Streaming Page

To select which channel measurements are displayed in the graph, check or uncheck the available channels shown next to the graph units. Selecting or not selecting the channels only affects the graph and not the data logged to a file. If a channel is not enabled in the Configuration page it will not appear on the Data Streaming page.

1.2.8.2 Logging Data to a File

Follow these steps to log measurement data to a file.

1. Click the button in the upper right under next to "Click to Select Log File"

Copyright © 2013–2019, Texas Instruments Incorporated

Figure 1-27. Select Log File Button on Data Streaming Page

2. Select a file name and directory to save the data to and then click the “Save” button
3. Whenever data streaming is running the data for all channels will be logged to this file. The selected file is shown next to the button.

1.2.8.3 Starting and Stopping Data Streaming

To start data streaming click the “Start” button.

Copyright © 2013–2019, Texas Instruments Incorporated

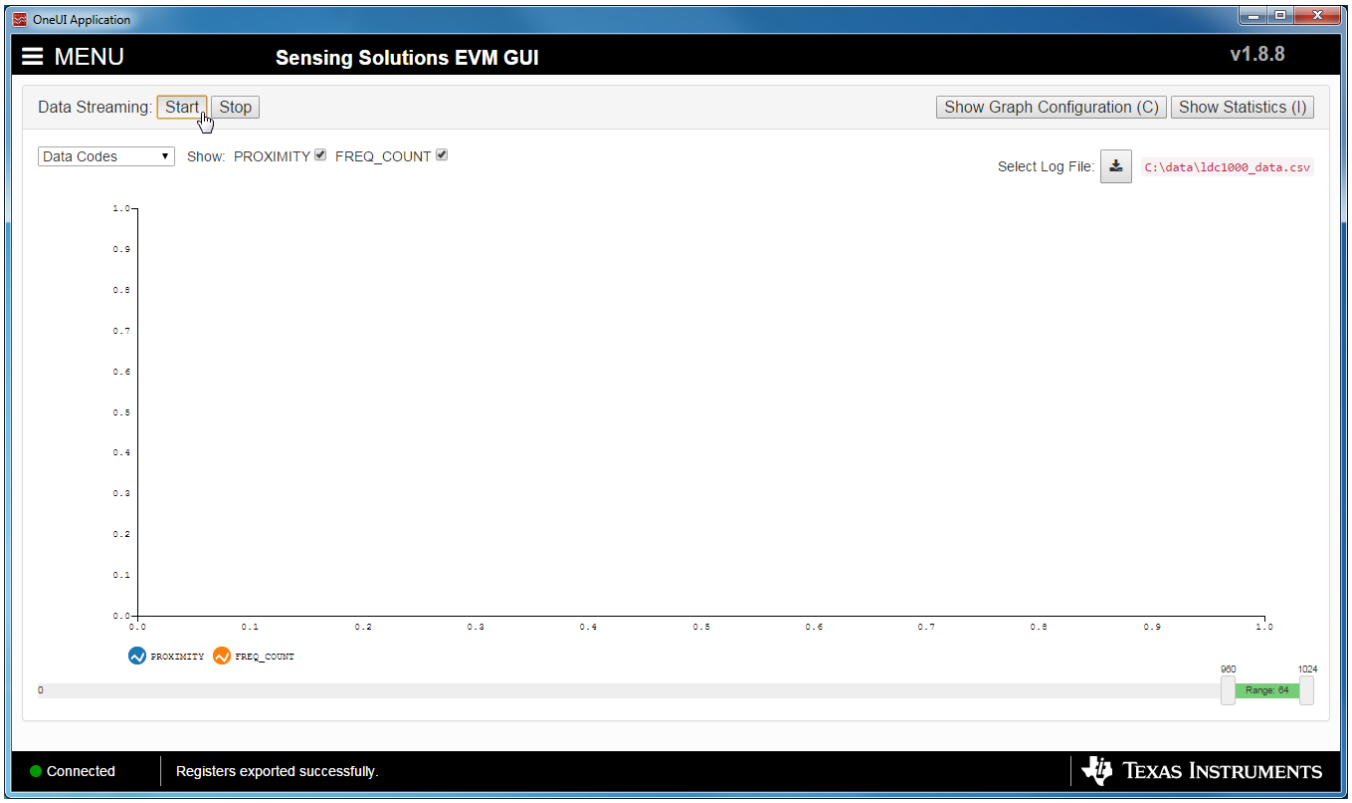

Figure 1-28. Start Button on Data Streaming Page

To stop data streaming click the “Stop” button.

Copyright © 2013–2019, Texas Instruments Incorporated

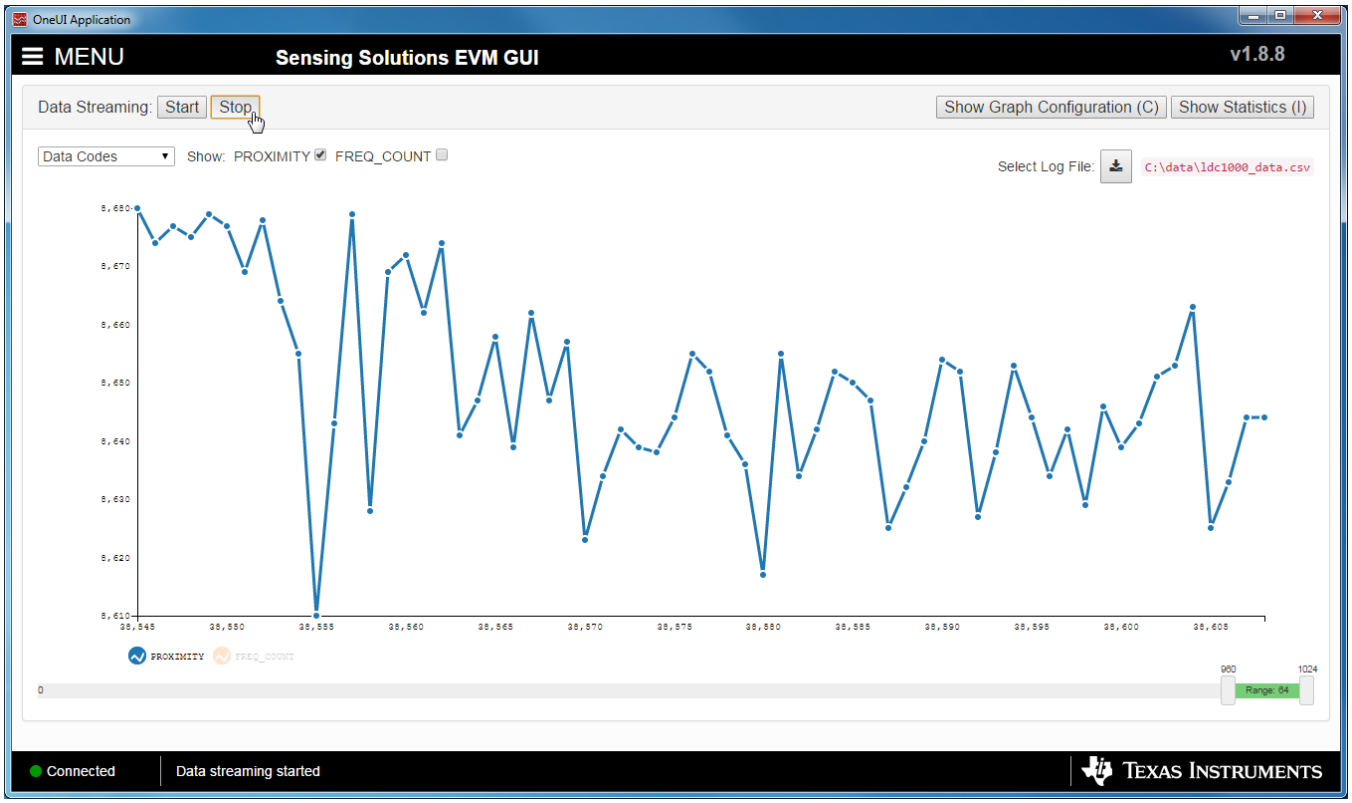

Figure 1-29. Stop Button on Data Streaming Page

1.2.8.4 Data Statistics

Click the “Show Statistics” button to view the measurement statistics.

Copyright © 2013–2019, Texas Instruments Incorporated

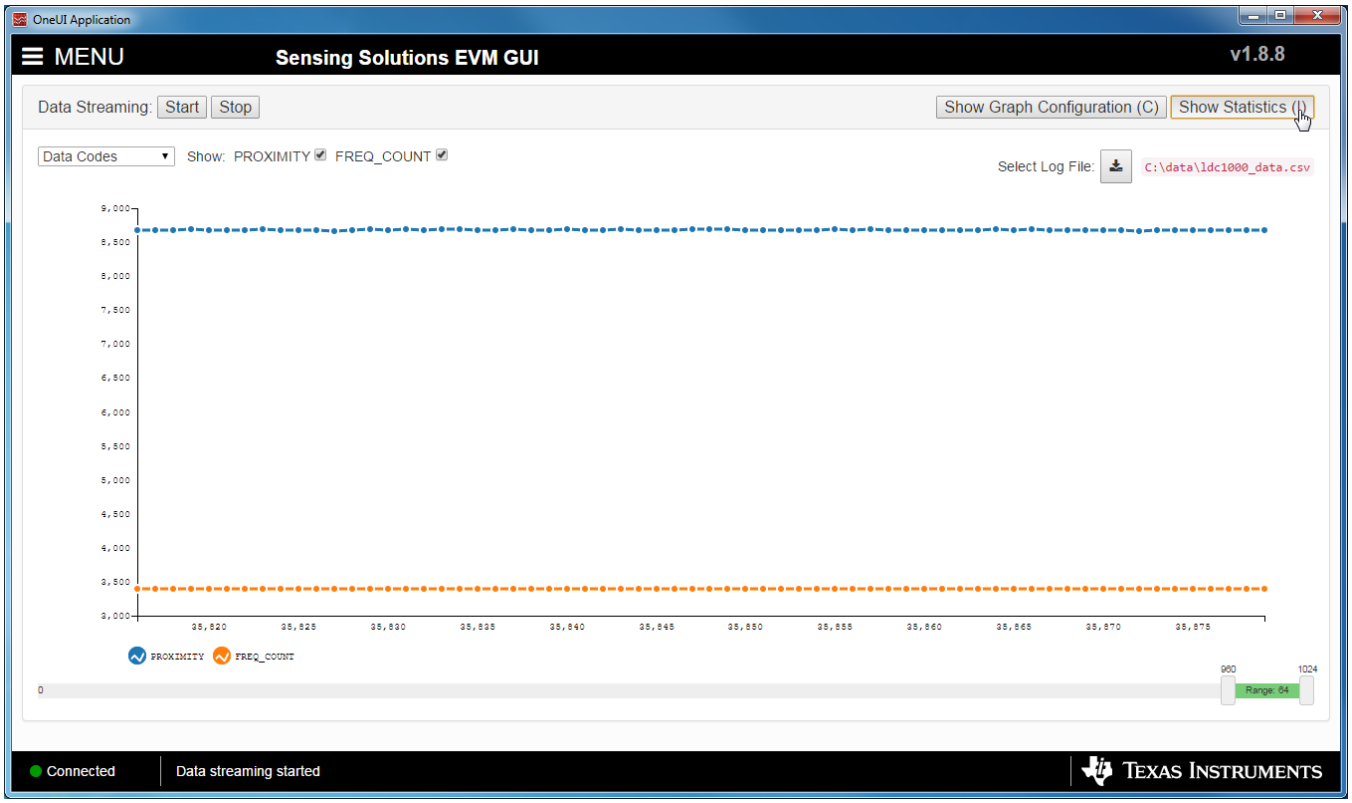

Figure 1-30. Show Statistics Button on Data Streaming Page

Click the “Hide Statistics” button to hide the measurement statistics.

Copyright © 2013–2019, Texas Instruments Incorporated

Figure 1-31. Hide Statistics Button on Data Streaming Page

1.2.8.5 Configuring the Graph

To configure the graph, click the "Show Graph Configuration" button.

Copyright © 2013–2019, Texas Instruments Incorporated

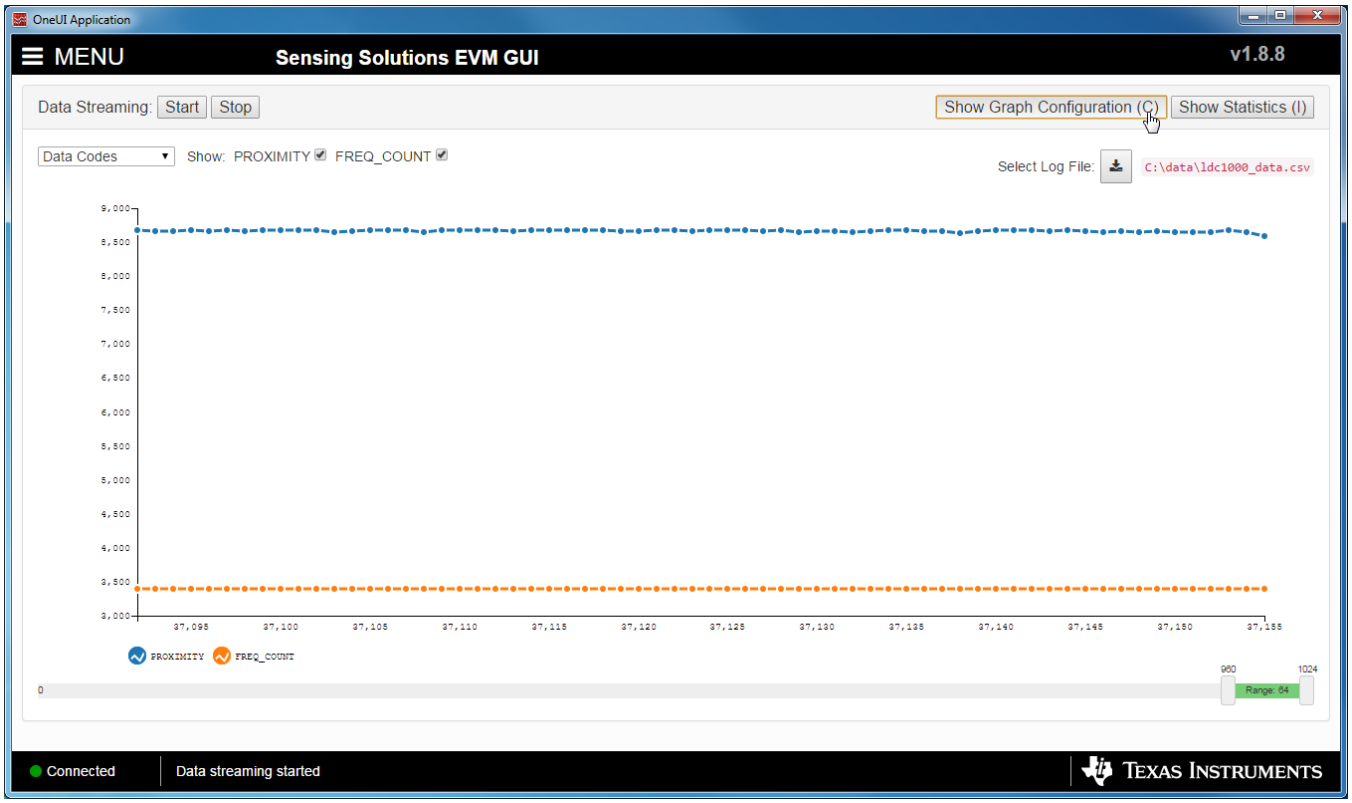

Figure 1-32. Show Graph Configuration Button on Data Streaming Page

Copyright © 2013–2019, Texas Instruments Incorporated

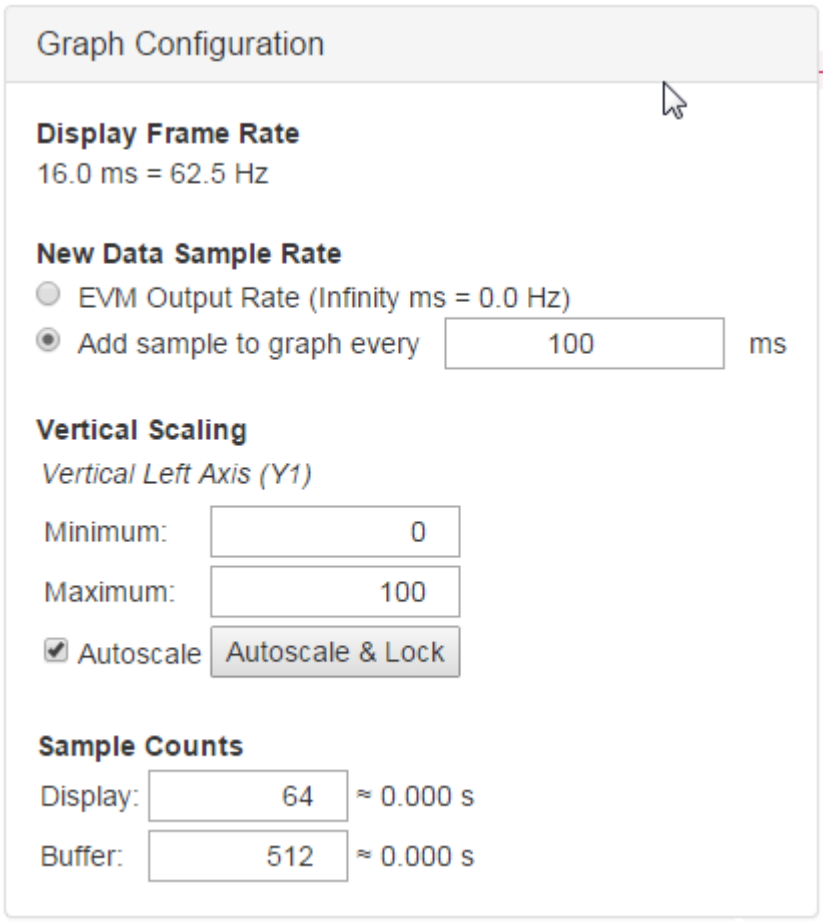

Figure 1-33. Graph Configuration Button on Data Streaming Page

The configuration window displays the actual frame rate of the graph, the rate at which data is added to the graph, the vertical scaling, and the sample buffer size. The display rate is the rate at which the graph updates on the computer display and is not configurable. It is automatically optimized by the GUI.

The "New Data Sample Rate" allows the user to choose when new data is added to the graph. Selecting "EVM Output Rate" will display data on the graph as fast as is available from the EVM. This should not be confused with the actual sampling rate of the device on the EVM which could be different. The "Add sample to graph every ... ms" will add a new sample to the graph at the specified rate.

The "Verical Scaling" allows the user to either manually set the minimum and maximum values of the y-axis on the graph or use auto-scaling. The "Autoscale & Lock" button scales the graph based on the data of the current display and then locks those vertical scaling settings.

The "Sample Counts" allows the user to specify the number of samples displayed on the graph and the total number of samples stored in the buffer. Please note the buffer size does not affect data logging to a file.

To hide the configuration window, click the "Hide Graph Configuration" button.

Copyright © 2013–2019, Texas Instruments Incorporated

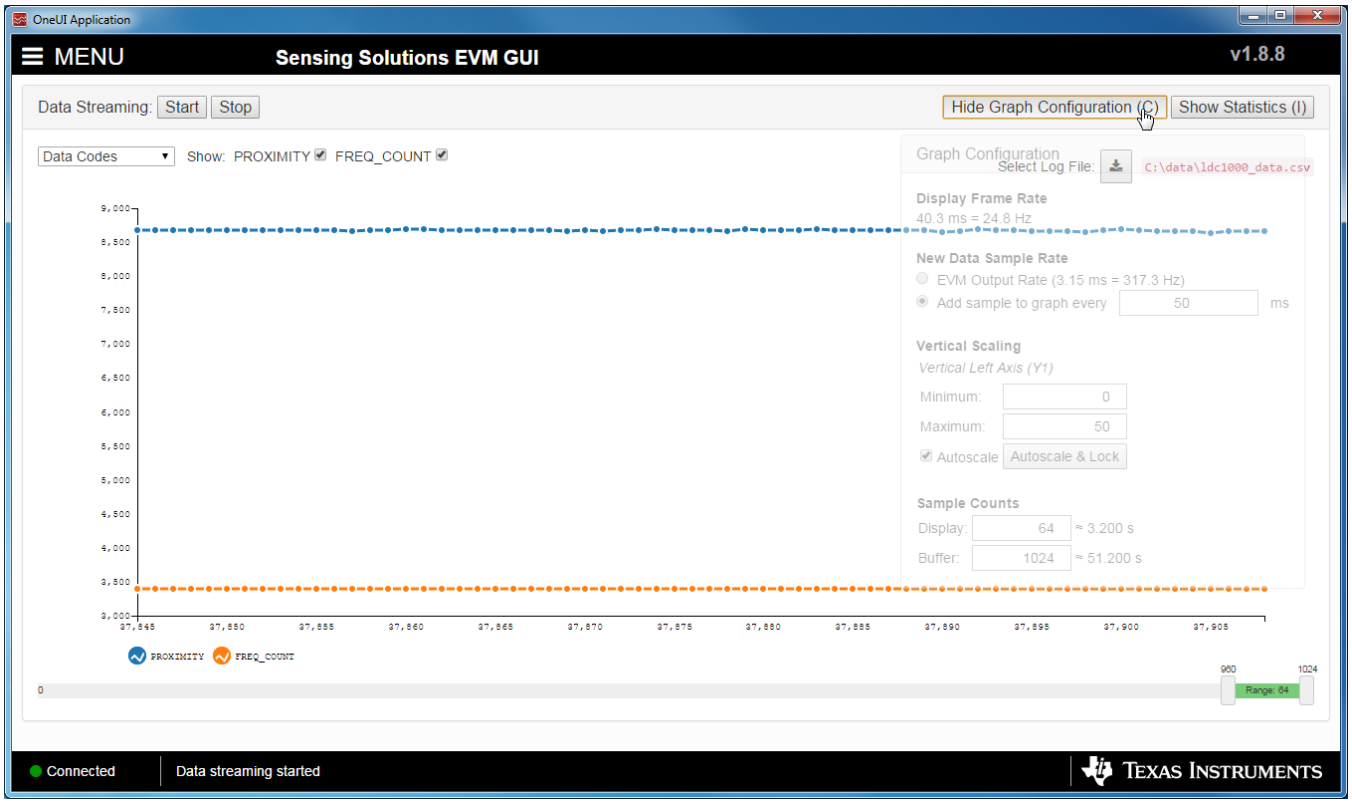

Figure 1-34. Hide Graph Configuration Button on Data Streaming Page

1.2.8.6 Navigating the Data Streaming Buffer

The Sensing Solutions EVM GUI stores a buffer of data samples and then displays a subset of those samples in the graph. The data buffer can be navigated using the horizontal slider below the graph. To adjust the samples displayed in the graph, click either the slider on the left or right side of the green bar and drag it closer or further from the other slider. The number of samples displayed is shown between the left and right sliders in the green bar.

Copyright © 2013–2019, Texas Instruments Incorporated

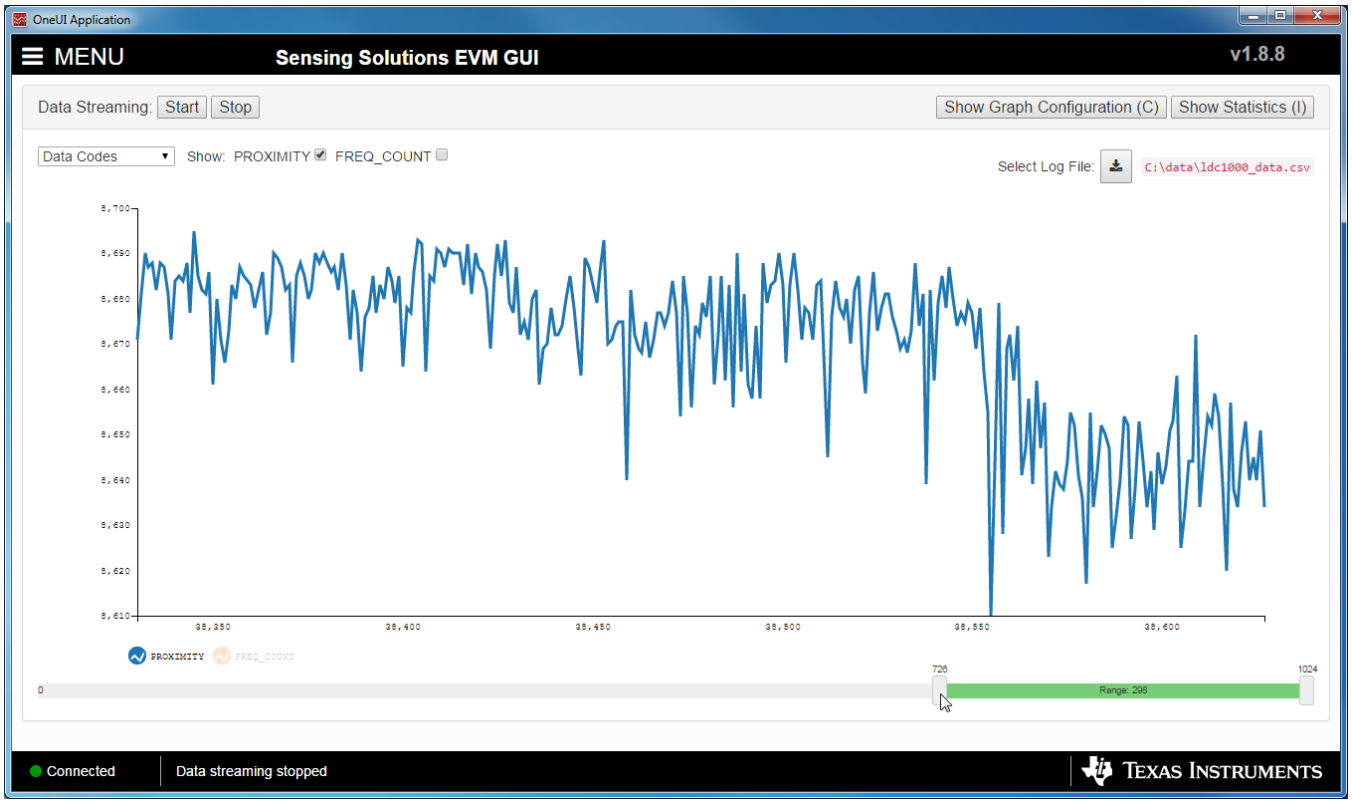

Figure 1-35. Changing Number of Samples Displayed in Data Graph

By clicking on the green bar sliders and dragging the mouse left or right, the displayed region of buffered LDC data can be adjusted.

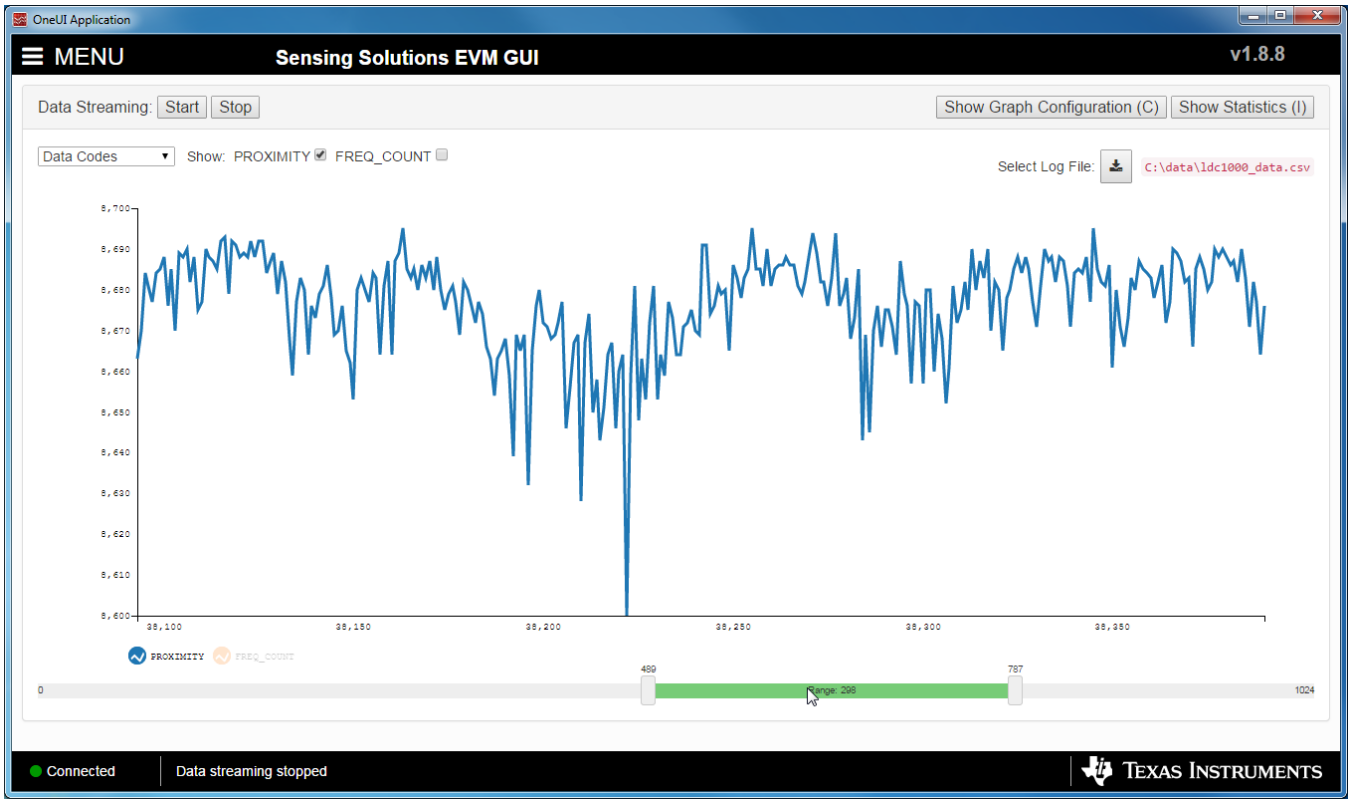

Figure 1-36. Displaying Previous Data Samples on the Data Streaming Page

1.2.9 Updating the EVM Firmware

To upload new firmware to the EVM, navigate to the "Firmware" page from the GUI menu and follow these steps. The images below show uploading the FDC2214 EVM firmware, but the steps are identical for any LDC, FDC, or HDC EVM when using their respective firmware files.

1. Click the button to select a TI-TXT firmware file

Copyright © 2013–2019, Texas Instruments Incorporated

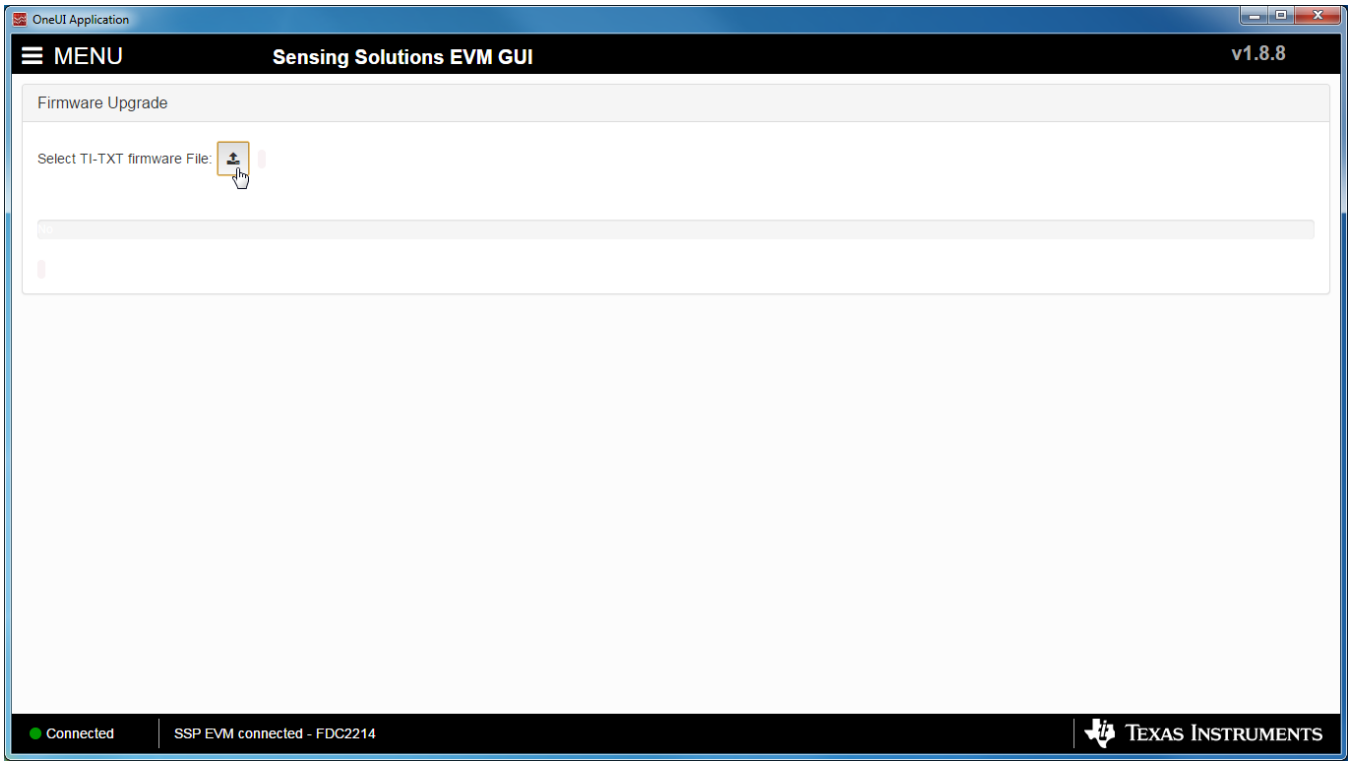

Figure 1-37. Select TI-TXT File Button on Firmware Upload Page

2. Select the firmware file and click “Open”

Copyright © 2013–2019, Texas Instruments Incorporated

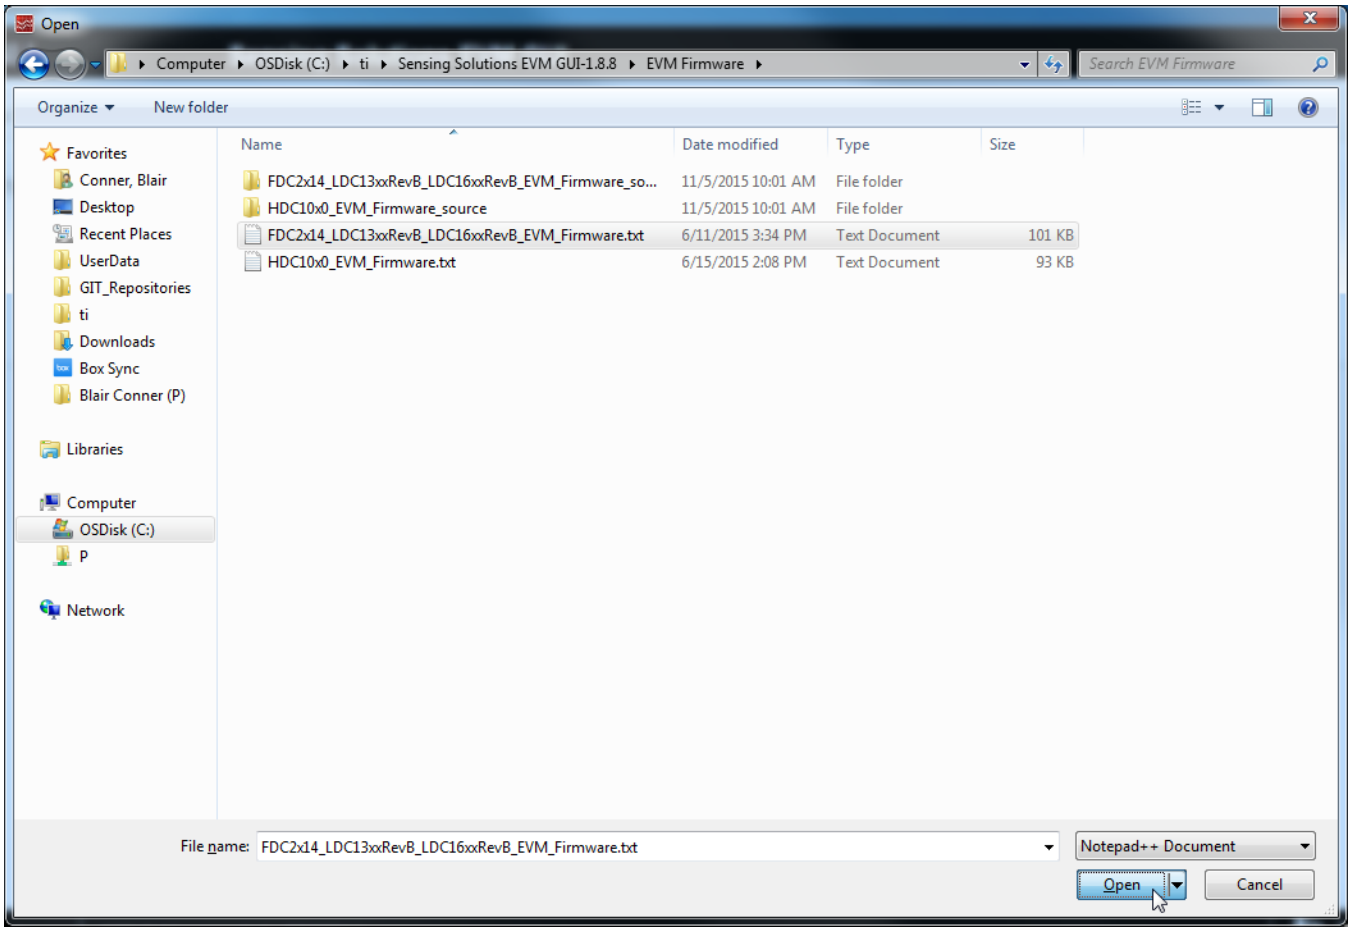

Figure 1-38. Selecting TI-TXT Firmware File for Upload to EVM

3. Click the “Upload Firmware” button

Copyright © 2013–2019, Texas Instruments Incorporated

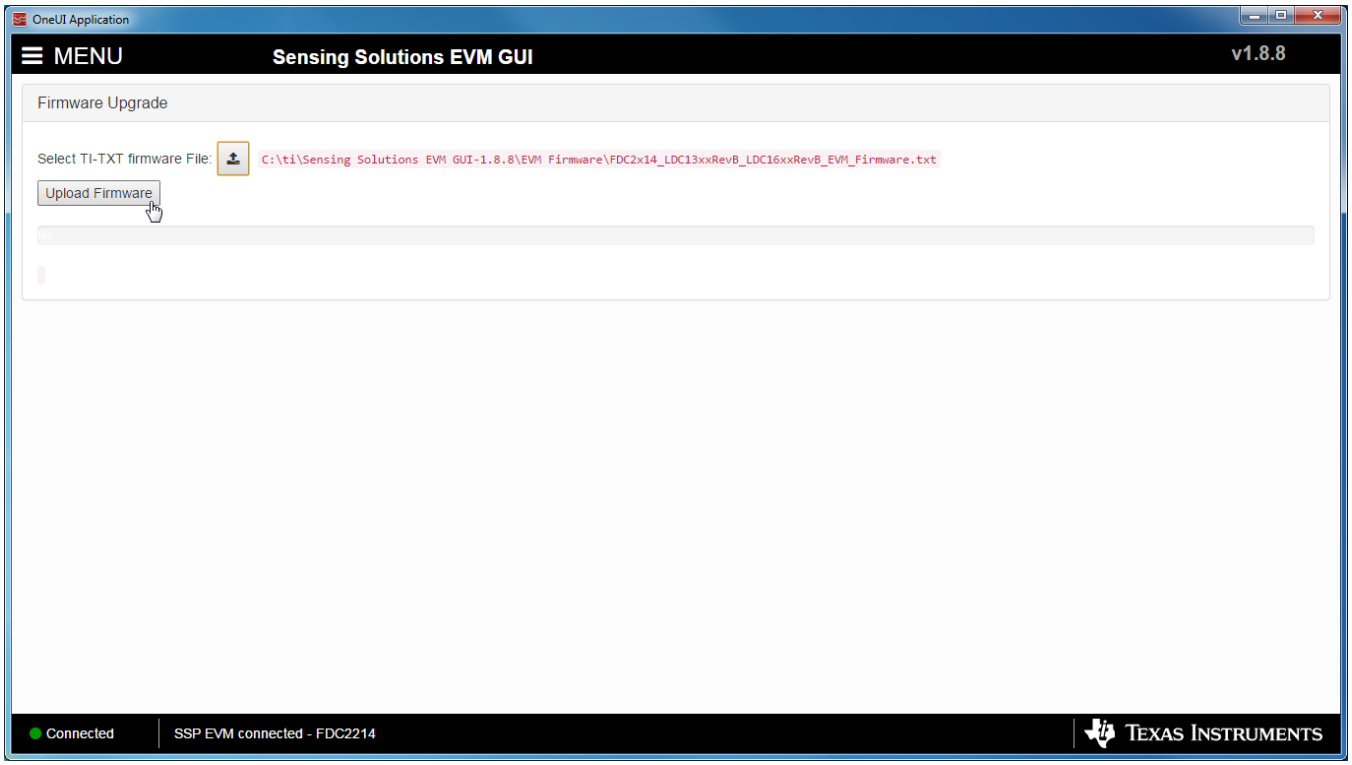

Figure 1-39. Upload Firmware Button on Firmware Upload Page

4. Wait for the firmware to upload. Do NOT disconnect the EVM from the PC at this time! Also note that the GUI will disconnect from the EVM. The upload process should not take more than one minute. If the upload fails or lasts longer than one minute, unplug the EVM and restart the GUI.

Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from A Revision (March 2014) to B Revision **Page**

- Added new part number LDC1001 2
- Updated GUI instructions to v1.8.8 3
- Updated *Choosing the Graph and Visible Channels* section 21

Changes from Original (September 2013) to A Revision **Page**

- Added new part numbers LDC1041/LDC1051 2
- Changed Changed Schematic to Vector graphic for better display. 37
