TITANIUM TWEEZERS (Swiss Made)

Titanium Grade 1 (unalloyed titanium) engineering materials with extraordinary combination of properties, relatively low density (4.5g/cm^3) good mechanical properties and a very high melting point that allows the use at high temperatures (870°C) good corrosion resistance at room temperature to air, marine and a variety of industrial environments such as chlorine solutions generally it is used when in addition to the corrosion resistance, high strength-to-weight ratio is required
