

## High-Q Multi-Layer and Broadband Blocking Capacitors

High Speed Capacitors

Advancing the possibilities with the breadth and depth of our industry-leading smaller, lighter, extreme temperature stable filters, resonators, and ceramic components for military, space and commercial customers.

## Company Overview

Dielectric Laboratories, Inc. (DLI) is your global partner for application specific microwave and millimeter wave components serving customers in fiber optic, wireless, medical, transportation, semiconductor, space, avionics and military markets. With over 35 years of experience, you can turn to DLI with confidence for your high frequency Single-Layer Capacitors, Multi-Layer Capacitors that are difficult to build and tight tolerance, Heat Sinks, Resonators, Filters, and Build-To-Print or Custom Thin Film Components.

DLI offers a broad range of Multi-Layer Capacitor products which are summarized in this catalog. Our products include C04, C06, C07, C08, C11, C17, C18, C22 and C40 High-Q Multi-Layer Capacitors. DLI has the world's most comprehensive array of Broadband Blocking Capacitors. We have the expertise in customizing, tight tolerances and meeting specific design targets. DLI continues to introduce exciting new innovations in custom ceramic resonator and filter technologies. These patent-protected products leverage decades of ceramic and Thin Film experience, creative and clever design expertise, and advanced prototyping and testing capabilities. Please discuss your needs with our Sales and Applications Engineering Team.

We are committed to serving you and thank you for your business.

## RoHS Compliance Statement

DLI is a leading supplier to the electronic components market and is fully committed to offering products supporting Restriction of Hazardous Substances (RoHS) directive 2002/95/E. All of our Dielectric formulations are RoHS compliant and we offer a broad range of capacitors with RoHS compliant terminations. DLI complies with the requirements of the individual customer and will maintain product offerings that meet the demands of our industry.

## Quality and Environmental Policy

DLI's reputation for quality and environmental responsibility is based on a commitment not only to meet our customers' requirements, but to exceed their expectations. The entire organization, beginning with top management, strives to achieve excellence in designing, manufacturing and delivering high Q capacitors and proprietary thin film components for niche high frequency applications, while maintaining safe and healthy working conditions. Furthermore, DLI commits to achieve these goals in an environmentally responsible manner through our commitment to comply with environmental regulations and implement pollution prevention initiatives. DLI strives to continually improve the effectiveness of our Quality and Environmental Management System through the establishment and monitoring of objectives and targets.

## What's New at DLI

### “NA” Material temperature compensating capacitors.

DLI is now offering our proprietary NA dielectric formulation in a variety of MLC case sizes. With its negative temperature coefficient of capacitance (N30+/-15ppm/°C), this high-Q porcelain dielectric is ideal for temperature compensating situations.

NA is offered as a drop-in replacement for most AH/CF part numbers, please contact our sales representatives for details.

### Extreme leach resistant terminations.

Engineering teams like to put our parts through their paces. When design engineers told us they'd like a termination that would allow them the freedom to use harsh solder profiles and multiple reworks, we listened! DLI has qualified enhanced versions of its RoHS compliant terminations designed to handle both the rigors of the test bench and the production floor with ease. The enhanced terminations are available in both standard (term code: E) and non-magnetic (term code: H) finishes. Please contact our sales team for more details.

### Tuning Rod Kits

DLI-designed tuning rods to utilize our C11 or C17 capacitors of a specified value attached to our High-Q insulating holder to find the optimum capacitor for a particular circuit or application without soldering capacitors. Using a range of capacitance values around the nominal value will allow for quick selection of the appropriate capacitance and then the selection of the correct surface mount capacitor from DLI.

### High Voltage 1111 case size.

DLI is please to introduce the new C18 series of enhanced voltage high-Q porcelain capacitors. With voltage ratings up to 2000V, the C18 is designed to be the most robust “1111” high-Q capacitor available today. The C18 is available in both our ultra stable (0±15ppm/°C) CF and temperature compensating (+90ppm/°C) AH dielectrics, and is form-factor compatible with our existing line of C17 “1111” capacitors. See pages 11 and 13 for more information!

See page 21 for Working Voltage Rating (WVDC).

## Multi-Layer – Standard P/N System

**C 17 CF 620 J - 7 U N - X 0 T**

Multi-Layer Capacitor    Case Size    Material System    Capacitance Value    Tolerance    Voltage Code    Termination Code    Leading Code    Test Level Code    Laser Marking Code    Packaging

### Case Size **17**

| Case | Dimensions      |
|------|-----------------|
| 04   | 0.040" x 0.020" |
| 06   | 0.060" x 0.030" |
| 07   | 0.110" x 0.070" |
| 08   | 0.080" x 0.050" |
| 10   | 0.120" x 0.010" |
| 11   | 0.055" x 0.055" |
| 12   | 0.120" x 0.060" |
| 17   | 0.110" x 0.110" |
| 18   | 0.110" x 0.110" |
| 20   | 0.220" x 0.200" |
| 22   | 0.220" x 0.220" |
| 36   | 0.360" x 0.040" |
| 40   | 0.380" x 0.380" |

### Voltage **7**

| Code | Voltage |
|------|---------|
| 5    | 50V     |
| 1    | 100V    |
| 8    | 150V    |
| 6    | 200V    |
| 9    | 250V    |
| 3    | 300V    |
| 4    | 500V    |
| 7    | 1000V   |
| A    | 1500V   |
| G    | 2000V   |
| B    | 2500V   |
| D    | 3600V   |
| F    | 5000V   |
| H    | 7200V   |
| S    | SPECIAL |

### Test Level **X**

| Code | Testing               |
|------|-----------------------|
| X    | Standard              |
| Y    | Reduced Visual        |
| A    | MIL-PRF-55681 Group A |
| C    | MIL-PRF-55681 Group C |
| D    | Customer Specified    |

### Material **CF**

| Material | Characteristics   |
|----------|-------------------|
| AH       | P90 High-Q        |
| CF       | NPO High-Q        |
| MS       | NPO High-Q        |
| UL       | Ultra Low ESR-NPO |
| BL       | DC Blocking       |

### Capacitance **620**

|                  |                                    |
|------------------|------------------------------------|
| First two digits | Significant figures in capacitance |
| Third digit      | Additional number of zeros         |
| R                | Represents a decimal point         |
| Examples:        | 620 = 62pF<br>152 = 1500pF         |

### Tolerance **J**

| Code | Value    |
|------|----------|
| A    | ± 0.05pF |
| B    | ± 0.1pF  |
| C    | ± 0.25pF |
| D    | ± 0.5pF  |
| F    | ± 1%     |
| G    | ± 2%     |
| J    | ± 5%     |
| K    | ± 10%    |
| M    | ± 20%    |
| X    | GMV      |
| S    | SPECIAL  |

### Termination **U**

| Code | Termination System                                         |
|------|------------------------------------------------------------|
| T    | Ag Termination, Ni Barrier Layer, Heavy SnPb Plated Solder |
| U    | Ag Termination, Ni Barrier Layer, SnPb Plated Solder       |
| S    | Ag Termination, Ni Barrier Layer, Gold Flash               |
| Z    | Ag Termination, Ni Barrier Layer, Sn Plated Solder         |
| E    | Ag Termination, Enhanced Ni Barrier, Sn Plated Solder      |

## Recommended Printed Wire Board Land Patterns

Printed Wire Board land pattern design for chip components is critical to ensure a reliable solder fillet, and to reduce nuisance type manufacturing problems such as component swimming and tombstoning. The land pattern suggested can be used for reflow and wave solder operations as noted. Land patterns constructed with these dimensions will yield optimized solder fillet formation and thus reduce the possibility of early failure.<sup>1</sup>

**A = (Max Length) + 0.030" (.762mm)\***

**B = (Max Width) + 0.010" (.254mm)**

**C = (Min Length) – 2 (Solder Band)\*\***

\*Add 0.030" for Wave Solder operations.

\*\*"C" to be no less than 0.02", change "A" to (Max Length) + 0.020".

1. Frances Classon, James Root, Martin Marietta Orlando Aerospace, "Electronics Packaging and Interconnection Handbook".

## Temperature Precautions

The rate of heating and cooling must be controlled to preclude thermal cracking of ceramic capacitors. Soldering temperatures should not exceed 200°C per minute, temperature variation must not exceed 100°C maximum for any solder operation. Avoid forced cooling or contact with heat sinks, such as conveyor belts, metal tables or cleaning solutions, before the chips reach ambient temperatures.

## MLC Orientation - Horizontal and Vertical Mounting

The orientation of the MLC relative to the ground plane affects the devices' impedance. When the internal electrodes are parallel to

the ground plane (Horizontal mounting) the impedance of the MLC resembles a folded transmission line driven from one end. The below graph shows the modeled insertion loss and parallel resonances of C17AH101K-7UN-X0T with horizontal mounting.

When the internal electrodes are perpendicular to the ground plane (Vertical mounting, bottom graph) the MLC impedance resembles a folded transmission line driven from the center reducing resonance effects. C11,17 are available with vertical or horizontal orientation in tape and reel packaging. Modeling can be done in CapCad. HP/EEs of series 4 contains models for C11 and C17 in the element libraries under Dielectric Laboratories MLC.

### Chip Selection

Multilayer capacitors (MLC) are categorized by dielectric performance with temperature, or “temperature coefficient”, as these devices vary in behavior over temperature. The choice of component is thus largely determined by the temperature stability required of the device, i.e. type of dielectric, and the size necessary for a given capacitance and voltage rating. The following items are pertinent to chip selection:

#### Dielectric Type

**CF:** Ultra stable Class I dielectric, with negligible dependence of electrical properties on temperature, voltage, frequency and time, used in circuitry requiring very stable performance.

**AH:** Class 1 dielectric with a dielectric constant that increases with temperature (90ppm/°C). Useful for temperature compensation where other board components may be losing capacitance with temperature.

**NA:** Class 1 dielectric with a negative TCC. Useful in situations where other board components are gaining capacitance with temperature.

**UL:** Stable Class I dielectric, with extremely low ESR. Useful in any application where heat generation or signal loss are concerns.

**BL:** Stable Class II dielectric (X7R), with predictable change in properties with temperature, voltage, frequency and time. Used as blocking, de-coupling, bypassing and frequency discriminating elements. This dielectric is ferroelectric, and provides higher capacitance than Class I.

**MS:** Stable Class I dielectric. Particularly suited to high capacitance or high volume applications.

### Capacitor Size

Size selection is based primarily on capacitance value, voltage rating, and resonance frequency. Smaller units are generally less expensive; 0603 is the most economical size. Because mass affects the thermal shock behavior of chips, size selection must consider the soldering method used to attach the chip to the board. C18 and smaller can be wave, vapor phase or reflow soldered. Larger units require reflow soldering.

### Termination Material

Nickel barrier termination, with exceptional solder leach resistance is recommended for all applications involving solder. DLI offers two versions of the nickel barrier termination. The “Z” termination is a nickel barrier with 100% matte tin for a lead free capacitor. The “U” termination is a nickel barrier with 90/10 tin/lead for military applications. Non-magnetic versions of these termination finishes are also available.

### Solder Leaching

DLI’s termination finishes are designed to withstand RoHS attachment methods. During soldering, time above 230°C should be minimized to reduce thinning of the barrier layer and subsequent bond failure. DLI offers enhanced magnetic and non-magnetic termination finishes for applications requiring extended soldering time or repeated reflow cycles. Please consult your Sales Representative when ordering.

### Packaging

Units are available in bulk, reeled or in waffle pack.

### Attachment Methods

Bonding of capacitors to substrates can be categorized into two methods, those involving solder, which are prevalent, and those using other materials, such as epoxies and thermo-compression or ultrasonic bonding with wire. Please see DLI application note “Recommended Solder Attachment Techniques for Multi-Layer Chip and Pre-Thinned Capacitors” located on our website, [www.dilabs.com](http://www.dilabs.com).

### Soldering

Soldering methods commonly used in the industry and recommended are Reflow Soldering, Wave Soldering, and to a lesser extent, Vapor Phase Soldering. All these methods involve thermal cycling of the components and therefore the rate of heating and cooling must be controlled to preclude thermal shocking of the devices. In general, rates which do not exceed 120°C per minute and a temperature spike of 100°C maximum for any soldering process on sizes C18 and smaller is advisable. Other precautions include post soldering handling, primarily avoidance of rapid cooling with contact with heat sinks, such as conveyors or cleaning solutions.

Large chips are more prone to thermal shock as their greater bulk will result in sharper thermal gradients within the device during thermal cycling. Units larger than C18 experience excessive stress if processed through the fast cycles typical of solder wave or vapor phase operations. Solder reflow is most applicable to the larger chips as the rates of heating and cooling can be slowed within safe limits. In general, rates that do not exceed 60°C per minute and a temperature spike of 50°C maximum for any soldering process on sizes larger than C18 is advisable.

Attachment using a soldering iron requires extra care, particularly with large components, as thermal gradients are not easily controlled and may cause cracking of the chip. Precautions include preheating of the assembly to within 100°C of the solder flow temperature, the use of a fine tip iron which does not exceed 30 watts, and limitation of contact of the iron to the circuit pad areas only.

### Bonding

Hybrid assembly using conductive epoxy or wire bonding requires the use of silver palladium or gold terminations. Nickel barrier termination is not practical in these applications, as intermetallics will form between the dissimilar metals. The ESR will increase over time and may eventually break contact when exposed to temperature cycling.

### Cleaning

Chip capacitors can withstand common agents such as water, alcohol and degreaser solvents used for cleaning boards. Ascertain that no flux residues are left on the chip surfaces as these diminish electrical performance.

### DLI Shelf Life

Capacitors are solderable for a minimum of one year from the date of shipment if properly stored in the original packaging. Dry nitrogen storage is preferable for longer periods.

## Board Design Considerations

The amount of solder applied to the chip capacitor will influence the reliability of the device. Excessive solder can create thermal and tensile stresses on the component which could lead to fracturing of the chip or the solder joint itself. Insufficient or uneven solder application can result in weak bonds, rotation of the device off line or lifting of one terminal off the pad (tombstoning). The volume of solder is process and board pad size dependent. WAVE SOLDERING exposes the devices to a large solder volume, hence the pad size area must be restricted to accept an amount of solder which is not detrimental to the chip size utilized. Typically the pad width is 66% of the component width, and the length is .030" (.760 mm) longer than the termination band on the chip. An 0805 chip which is .050" wide and has a .020" termination band therefore requires a pad .033" wide by .050" in length. Opposing pads should be identical in size to preclude uneven solder fillets and mismatched surface tension forces which can misalign the device. It is preferred that the pad layout results in alignment of the long axis of the chips at right angles to the solder wave, to promote

even wetting of all terminals. Orientation of components in line with the board travel direction may require dual waves with solder turbulence to preclude cold solder joints on the trailing terminals of the devices, as these are blocked from full exposure to the solder by the body of the capacitor. Restrictions in chip alignment do not apply to SOLDER REFLOW or VAPOR PHASE processes, where the solder volume is controlled by the solder paste deposition on the circuit pads. There are practical limitations on capacitor sizes that prohibit reliable direct mounting of chip capacitors larger than 2225 to a substrate. Without mechanical restriction, thermally induced stresses are released once the capacitor attains a steady state condition, at any given temperature. Capacitors bonded to substrates, however, will retain some stress, due primarily to the mismatch of expansion of the component to the substrate; the residual stress on the chip is also influenced by the ductility and hence the ability of the bonding medium to relieve the stress. Unfortunately, the thermal expansions of chip capacitors differ significantly from those of substrate materials.

Case Size Definitions

(1) See Lead Code Definitions on page 6 for lead orientation details.

(2) Body dimensions include termination, lead and ceramic.

## AH Series: P90 Porcelain Capacitors

### Description

Porcelain Capacitors  
Positive TC "P90"  
Low ESR, High Q  
Capacitance  
Range 0.1 - 5100 pF  
High Self-resonance  
Low Noise  
Established Reliability

### Functional Applications

Impedance Matching  
DC Blocking  
Bypass  
Coupling  
Tuning & Feedback  
Amplifier Matching Networks  
VCO Frequency Stabilization  
Filtering, Diplexers & Antenna Matching  
High RF Power Circuits

### Benefits

Oscillators  
Timing Circuits  
Filters  
RF Power  
Amplifiers & Delay Lines  
Stable TC, -55° to +125°C Operating Range  
High Q  
SMD Compatibility  
Lower ESR  
Power Handling, High Voltage

### Dielectric Characteristics

| Dielectric Material Code | Temperature Coefficient (ppm/°C Maximum) | Dissipation Factor (% @ 1MHz Maximum) | Dielectric Withstanding Voltage |                                                           | Insulation Resistance (MΩ Minimum) |                 | Aging | Piezoelectric Effects | Dielectric Absorption |
|--------------------------|------------------------------------------|---------------------------------------|---------------------------------|-----------------------------------------------------------|------------------------------------|-----------------|-------|-----------------------|-----------------------|
|                          |                                          |                                       | Voltage Rating (Volts)          | DWV (Volts)                                               | @ +25°C                            | @ +125°C        |       |                       |                       |
| AH                       | +90 ± 20                                 | 0.05                                  | Please see chart (pg. 10)       | 250% of WVDC for 5 sec unless specified in chart (pg. 10) | 10 <sup>6</sup>                    | 10 <sup>5</sup> | None  | None                  | None                  |

### Part Number Breakdown\*

| Multi Layer | Case Size | Material System | Capacitance Code | Tolerance Level | Voltage Code | Termination Code | Leading Code | Test Level | Marking Code | Packaging |

#### Available Termination Types

|     |                                       |
|-----|---------------------------------------|
| C11 | T, U, S, Z, E, P, Q, Y, M, W, H, V, R |
| C17 | T, U, S, Z, E, P, Q, Y, M, W, H, V, R |
| C18 | U, Z, E, Y, W, H                      |
| C22 | U, S, Z, E, P, Q, Y, M, W, H, V, R    |
| C40 | T, U, S, Z, E, P, Q, Y, M, W, H, V, R |

#### Code Termination System

|   |                                                               |
|---|---------------------------------------------------------------|
| T | Ag Term, Ni Barrier Layer, Heavy SnPb Plated Solder           |
| U | Ag Termination, Ni Barrier Layer, SnPb Plated Solder          |
| S | Ag Termination, Ni Barrier Layer, Gold Flash, RoHS            |
| Z | Ag Termination, Ni Barrier Layer, Sn Plated Solder, RoHS      |
| E | Ag Termination, Enhanced Ni Barrier, Sn Plated Solder, RoHS   |
| P | AgPd Termination, RoHS                                        |
| Q | Polymer Termination, Ni Barrier Layer, Sn Plated Solder, RoHS |
| Y | Polymer Termination, Ni Barrier Layer, SnPb Plated Solder,    |
| M | Polymer Termination, Cu Barrier Layer, Sn Plated Solder, RoHS |
| W | Ag Termination, Cu Barrier Layer, Sn Plated Solder            |
| H | Ag Termination, Enhanced Cu Barrier, Sn Plated Solder, RoHS   |
| V | Ag Termination, Cu Barrier Layer, SnPb Plated Solder          |
| R | Ag Termination, Cu Barrier Layer, Heavy SnPb Plated Solder    |

#### Available Lead Types

|     |                  |
|-----|------------------|
| C11 | A, B, D          |
| C17 | A, B, C, D, E, F |
| C18 | A, B, C, D, E, F |
| C22 | A, B, C, D, E, F |
| C40 | A, B, C, D, E, F |

Special Leading requirements available.

#### Code Lead Types

|   |                    |
|---|--------------------|
| A | Axial Ribbon       |
| B | Radial Ribbon      |
| C | Center Ribbon      |
| D | Customer Specified |
| E | Axial Wire         |
| F | Radial Wire        |
| N | None               |

#### Test Level – All Case Sizes

|   |                       |
|---|-----------------------|
| X | Standard              |
| Y | Reduced Visual        |
| A | MIL-PRF-55681 Group A |
| C | MIL-PRF-55681 Group C |
| D | Customer Specified    |

#### Available Laser Marking

|     |                  |
|-----|------------------|
| C11 | 0, 1, 2, 5       |
| C17 | 0, 1, 2, 3, 4, 5 |
| C18 | 0, 1, 2, 5       |
| C22 | 0, 1             |
| C40 | 0, 1             |

#### Code Laser Marking

|   |                          |
|---|--------------------------|
| 0 | No marking               |
| 1 | Single-side marked       |
| 2 | Double-side marked       |
| 3 | Large single-side marked |
| 4 | Large double-side marked |
| 5 | Vertical edge marked     |
| 9 | Customer Specified       |

#### Available Packaging

|     |                  |
|-----|------------------|
| C11 | T, V, W, B, P, S |
| C17 | T, V, W, B, P, S |
| C18 | T, V, W, B, P, S |
| C22 | T, B, P, S       |
| C40 | T, B, P, S       |

#### Code Packaging

|   |                          |
|---|--------------------------|
| T | Tape & Reel – Horizontal |
| V | Tape & Reel – Vertical   |
| W | Waffle Pack              |
| B | Bulk                     |
| P | Plastic Box              |
| R | Tube (Rail)              |
| S | Customer Specified       |

| C06 | N/A              |
| C11 | A, B, D          |
| C17 | A, B, C, D, E, F |
| C18 | A, B, C, D, E, F |
| C22 | A, B, C, D, E, F |
| C40 | A, B, C, D, E, F |

Special Leading requirements available.

#### Code Lead Types

|   |                    |
|---|--------------------|
| A | Axial Ribbon       |
| B | Radial Ribbon      |
| C | Center Ribbon      |
| D | Customer Specified |
| E | Axial Wire         |
| F | Radial Wire        |
| N | None               |

#### Test Level – All Case Sizes

|   |                       |
|---|-----------------------|
| X | Standard              |
| Y | Reduced Visual        |
| A | MIL-PRF-55681 Group A |
| C | MIL-PRF-55681 Group C |
| D | Customer Specified    |

#### Available Laser Marking

|     |                  |
|-----|------------------|
| C06 | 0, 1, 2          |
| C11 | 0, 1, 2, 5       |
| C17 | 0, 1, 2, 3, 4, 5 |
| C18 | 0, 1, 2, 5       |
| C22 | 0, 1             |
| C40 | 0, 1             |

#### Code Laser Marking

|   |                          |
|---|--------------------------|
| 0 | No marking               |
| 1 | Single-side marked       |
| 2 | Double-side marked       |
| 3 | Large single-side marked |
| 4 | Large double-side marked |
| 5 | Vertical edge marked     |
| 9 | Customer Specified       |

#### Available Packaging

|     |                  |
|-----|------------------|
| C06 | T, W, B, S       |
| C11 | T, V, W, B, P, S |
| C17 | T, V, W, B, P, S |
| C18 | T, V, W, B, P, S |
| C22 | T, B, P, S       |
| C40 | T, B, P, S       |

#### Code Packaging

|   |                          |
|---|--------------------------|
| T | Tape & Reel – Horizontal |
| V | Tape & Reel – Vertical   |
| W | Waffle Pack              |
| B | Bulk                     |
| P | Plastic Box              |
| R | Tube (Rail)              |
| S | Customer Specified       |

# CF Series: Ultrastable Porcelain Capacitors

## RF Characteristics

**ESR vs Frequency**  
DLI C06 CF Series

**Q vs Capacitance**  
DLI C06 CF Series

**ESR vs Frequency**  
DLI C11 CF Series

**Q vs Capacitance**  
DLI C11 CF Series

**ESR vs Frequency**  
DLI C17 CF Series

**Q vs Capacitance**  
DLI C17 CF Series

**ESR vs Frequency**  
DLI C18 CF Series

**Q vs Capacitance**  
DLI C18 CF Series

The information above represents typical device performance.

## RF Characteristics

ESR vs Frequency  
DLI C22 CF Series

Q vs Capacitance  
DLI C22 CF Series

Resonant Frequency vs Capacitance  
DLI C06 CF Series

Resonant Frequency vs Capacitance  
DLI C11 CF Series

Current Rating vs. Capacitance,  
(infinite heat sink, 25°C ambient temperature)  
DLI C17CF Series

DLI C22CF Series Current Rating vs. Capacitance,  
(infinite heat sink, 25°C ambient temperature)

The information above represents typical device performance.

## MS Series: Low ESR, High Volume Ceramic Capacitors

| Description                                                                                                             | Functional Applications                                                                                                                                                                                              | Benefits                                                                                                                                                                                                                                                      |

## C04/C06/C08 Broadband Blocks

### Functional Applications

Fiber Optic Links, High Isolation Decoupling, LAN's, VCO Frequency Stabilization, Duplexers, RF/Microwave Modules, Instruments and Test Equipment.

### Benefits

Resonance free DC Blocking / Decoupling, Less than 0.25 db loss @ 4 GHz (typical), Surface mountable

### Mechanical Specification

| Product Code | Body Dimensions |                 |               | Band Dimensions (B) |         |
|--------------|-----------------|-----------------|---------------|---------------------|---------|
|              | Length (L)      | Width (W)       | Thickness (T) | Min                 | Max     |
| C04BL        | 0.040" ± 0.008" | 0.020" ± 0.006" | 0.028" Max    | 0.003"              | 0.019"  |

High Q & Broadband MLC Compared Insertion Loss (S21)

C04BL121X-5UN-X0T Insertion Loss (S21)

The information above represents typical device performance.

## Features

Improved Low Frequency Stability over Temperature  
Very Low Series Inductance  
X7R Temperature and Voltage Stability

## Benefits

Resonance Free DC Blocking to >40GHz  
Surface Mountable by Solder or Epoxy Bonding  
Available in Tape & Reel or Waffle Pack Format  
Improved Low Frequency Stability over Temperature

## Opti-Cap™ Electrical Characteristics

Notes:

1. Termination Metalization:  $7.5 \pm 4.5$  micro inches Au over 50 microinches Ni min.
2. Maximum assembly process temperature:  $250^{\circ}\text{C}$
3. For best high frequency performance, attach surface A to transmission line. For 50 ohm system, transmission line should be near or slightly greater than 20 mils. Recommended microstrip gap length is 0.015 inch.
4. Rated working voltage (WVDC) is the lesser of 25 volts (Milli.) or multilayer WVDC from Table B.
5. Recommended attachment is solder or conductive epoxy.

P02BN8820MA2636

# Milli-Cap® SMD Millimeter Wave Capacitor

## Functional Applications

0402, 0502 and 0602 Footprints, Very Low Series Inductance, Ultra High Series Resonance, Low Loss High Q part.

## Benefits

Matches typical 50Ω Line Widths, Preserves Board Space, Behaves Like An Ideal Capacitor, More Usable Bandwidth

## Mechanical Specification

- Terminations: Gold
- Assembly temperatures not to exceed 260°C.
- Ideal for Test Equipment, Photonics, SONET, Digital radios, and Matching Filter applications

| Highest performance SLC for RF, MW and MMW applications from 100 MHz to 100 GHz. Most cap for size 0.02 – 4300 pF | SLC w 1- or 2-sided recessed metallization to minimize the potential for shorting during die attach. Ideal for epoxy attach. 0.02 – 1500 pF | Series configured precision SLC for elimination of wire-bonds and microstrip applications. Minimum performance variation. | Multiple decoupling/ bypass or blocking SLC configured in a single array. 1-13 GHz. Ideal for decoupling MMICs. | Multi-value – binary tunable SLC for design tuning or MIC hybrids. | DiCap® SLC used in series connected open circuited transmission line- designed for repeatable resonance behavior. |

## Filters/Heat Sinks/Sub Mounts/Standoffs

| Filter Family                                                                                                                                                                                                     | Bias Filter Network                                                                                                                                                            | Heatsinks, Sub Mounts and Standoffs                                                                                                                                                                                                      | Build to Print                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Micro-strip, cavity filters, duplexers, diplexers, GPS filters. Frequency from 500 MHz to 67 GHz. No tuning required, extremely temperature stable, miniature and lightweight. Customized designs and prototypes. | Designed to filter RF signals from bias and control line from 10MHz to 40GHz. Reduces RF feedback through bias supplies and simplifies assembly – one component replaces many. | For laser diodes, VCSEL, and others for the fiber optics industry. DLI can customize a design for high volume and be very price competitive. The next generation of “smart” heatsinks are also available using proprietary technologies. | DLI maintains an inventory of industry standard ceramics and manufactures a large selection of proprietary and/or patented custom ceramics. Plus, DLI's custom ceramics can offer significantly better thermal performance than the majority of industry standard ceramics and have the added benefit of a sufficiently higher K allowing miniaturization opportunities. |

## Equalizers/Duplexers/Resonators

| Gain Equalizer                                                                                                                                                                                                                                                                                 | Duplexers and Diplexers                                                                                                                                                                                                                                                            | Cavity Resonator                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Excellent, repeatable microwave performance is achieved by application of precision thin film fabrication and DLI HI-K ceramic materials. DLI's unique design solution provides near ideal R-C frequency response, far superior to “Stacked R-C chip” assemblies. RADAR application to 67 GHz. | Duplexers are three port devices used to separate and combine frequencies, having two filters with a common driving point covering two frequency bands. Diplexers are three port devices used to separate and combine frequencies, having one filter covering all frequency bands. | DLI's Cavity Resonators set a new standard for high Q resonator performance across a broad spectrum of frequencies. High Q resonators play a critical role in system noise performance, and employing the advantage is dramatically easier and less expensive than ever before. These products include extremely stable Single Frequency Cavity Resonators (SFCR), Narrow-Band and Wide-Band Tunable Ceramic Resonator, and Two-Port Resonators. Single Frequency Cavity Resonators-standard from 3GHz to >67GHz. Two Port Cavity Resonators-standard from 3GHz to >67GHz. |

## Substrates

DLI manufactures and/or procures substrates to allow our customers to manufacture their own custom ceramic products\*. DLI's proprietary and/or patented ceramics offer high K values, to allow for miniaturization, extreme temperature stability, space reliability and radiation hardened properties. As a direct result of the above, DLI is able to offer our customers a complete array of fabrication services for all industry standards and/or custom ceramics.

\*DLI does restrict certain proprietary materials in specific applications for internal use only.

Ceramic & Microwave Products (CMP) designs, manufactures and sells special electronic components and systems including: high performance filters, switches, capacitors, EMI and co-site signal interference solutions. Our products are used in military and space, telecom infrastructure, medical and industrial applications where function and reliability are crucial.
