I.C. Test Clips

- The ideal tool for testing dual-in-line integrated circuits in situ.
- Will hold firmly to the I.C. making contact to each lead even on densely packed PC boards
- Three versions for DILs from 14 to 40 pins.

The high quality moulded service/test tool is manufactured from yellow acetal polymer with a sliding band of black nylon for minimum friction. The phosphor bronze contact pins are gold plated on nickel plating. This achieves the low contact resistance required on such a tool. Ideal both for test and service engineers.

Type	A mm	B mm	C mm
14-16	5	35	21
26-28	14	36	37
40	14	36	52
