

MOTOROLA

SEMICONDUCTOR

TECHNICAL DATA

1SMC5.0, A thru 1SMC170, A

PLASTIC SURFACE MOUNT
ZENER OVERVOLTAGE
TRANSIENT SUPPRESSORS
1500 WATT PEAK POWER
5.0 WATTS STEADY STATE

CASE 403-01

OUTLINE DIMENSIONS

NOTES:

1. DIMENSIONING AND TOLERANCING PER ANSI Y14.5M, 1982.
2. CONTROLLING DIMENSION: INCH.

DIM	MILLIMETERS		INCHES	
	MIN	MAX	MIN	MAX
A	6.74	6.98	0.265	0.275
B	5.72	5.96	0.225	0.235
C	2.01	2.26	0.079	0.089
D	2.88	3.12	0.113	0.123
H	0.013	0.101	0.0005	0.0040
J	0.11	0.25	0.004	0.010
K	1.02	1.27	0.040	0.050
L	1.17	1.42	0.046	0.056
S	7.80	8.05	0.307	0.317

Zener Overvoltage Transient Suppressors

... designed specifically for transient voltage suppression. The wide leads assure a large surface contact for good heat dissipation, and a low resistance path for surge current flow to ground.

A 1500 W (SMC) device is normally selected when the threat of transients is from lightning induced transients, conducted via external leads or I/O lines. It is also used to protect against switching transients induced by large coils or industrial motors. Source impedance at component level in a system is usually high enough to limit the current to within the peak pulse current (I_{PP}) rating of this series.

- Standard Zener Voltage Range — 5.0 to 170 V
- Peak Power — 1500 Watts @ 1.0 ms
- Low Inductance Package
- Low Leakage < 5.0 μ A Above 10 V
- Package Designed for Top Side or Bottom Circuit Board Mounting
- Available in Tape and Reel

Mechanical Characteristics:

CASE: Void-free, transfer-molded, thermosetting plastic

FINISH: All external surfaces are corrosion resistant and leads are readily solderable and weldable

POLARITY: Cathode indicated by molded polarity notch. When operated in zener mode, will be positive with respect to anode.

MOUNTING POSITION: Any

LEADS: Modified L-Bend providing more contact area to bond pad

MAXIMUM CASE TEMPERATURE FOR SOLDERING PURPOSES: 230°C for 10 seconds

MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Peak Power Dissipation (1) @ $T_L \leq 25^\circ\text{C}$	P_{PK}	600	Watts
Steady State Power Dissipation @ $T_L \leq 75^\circ\text{C}$ Derated above $T_L = 75^\circ\text{C}$	P_D	5.0 50	Watts mW/°C
Forward Surge Current (2) @ $T_A = 25^\circ\text{C}$	I_{FSM}	100	Amps
Operating and Storage Temperature Range	T_J, T_{stg}	-65 to +175	°C

Note 1. A transient suppressor is normally selected according to the reverse "Stand Off Voltage" (V_R) which should be equal to or greater than the DC or continuous peak operating voltage level.

Note 2. 1/2 Square wave (or equivalent), PW = 8.3 ms, Duty Cycle = 4 Pulses per min. max.

Figure 2. Pulse Derating Curve

T-11-23

ABBREVIATIONS AND SYMBOLS

V_R	Stand Off Voltage. Applied reverse voltage to assure a non-conductive condition (See Note 1, on page 1)
$V_{(BR)min}$	This is the minimum breakdown voltage the device will exhibit and is used to assure that conduction does not occur prior to this voltage level at 25°C.
V_C	Maximum Clamping Voltage. The maximum peak voltage appearing across the transient suppressor when subjected to the peak pulse current in a one millisecond time interval. The peak pulse series resistance and thermal rise.
I_{PP}	Peak Pulse Current — See Figure 2
P_P	Peak Pulse Power
I_R	Reverse Leakage

RECOMMENDED PAD SIZES

The pad dimensions should be 0.010" longer than the contact size, in the lead axis. This allows a solder fillet to form, see figure below.
