

Mounting systems for industrial sensors

Universal bar clamp systems, mounting brackets, protective devices, alignment brackets and mountings for cylinder sensors

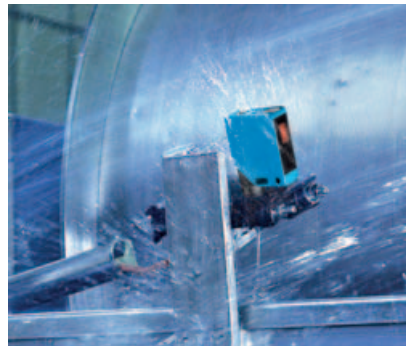

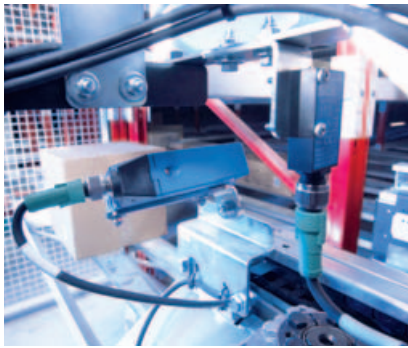

Creating a firm hold and keeping the elements out –
mounting and protection for industrial sensors

Sensors

Mounting systems

A winning combination

Worldwide, SICK is a renowned specialist in the field of industrial sensors. Accurate integration of these sensors into industrial installations requires mounting concepts precisely matched to SICK sensors. Sensors and mounting systems from SICK – a winning combination.

From the electronics industry to heavy industry

Different applications mean different requirements from sensors and accessories. Whether fine adjustment on precision machines or protection from extreme ambient conditions, e.g. in the steel industry, SICK offers appropriate concepts for assembly, alignment and protection of industrial SICK sensors.

Efficiency and functionality

SICK sensors ensure reliable plant and machine processes worldwide, in many different industries and applications. This requires clever assembly solutions minimising installation requirements for sensors and, simultaneously, ensuring flexibility and operational safety. Mounting systems from SICK – efficient and functional.

Mounting Systems

A clever turn

The SICK turntable shows, at a glance, which mounting option is needed for which sensor. Simply turn the required sensor into the punched window and, using the colour coding, identify the mounting option and catalogue page. The catalogue page contains the dimensional drawings, scope of delivery and further detailed information.

SICK mountings and protective devices matched to SICK sensors: the perfect team for diverse applications in many different industries

UNIVERSAL BAR CLAMP SYSTEMS for cuboid/round sensors and reflectors

The most flexible solution where sensors need to be fixed by means of a bar. Universal bar clamp systems offer secure fixing and variable alignment options.

MOUNTING BRACKETS for cuboid/round sensors and light grids

The versatile alternative for all types of sensors and light grids. Floor or wall mounted, articulated arm or rotary bracket: mounting accessories from SICK solve almost any problem.

PROTECTIVE DEVICES for cuboid sensors

When it gets difficult, SICK protective devices offer optimum protection for optical sensors. Protective housings with cable protection, dust shields with air purging or weather hoods protect SICK sensors from aggressive environments and mechanical damage.

MOUNTINGS FOR CYLINDER SENSORS

Adapters for cylinder sensors from SICK ensure perfect interaction of sensors and pneumatic cylinders. Whether round body, profile or tie-rod cylinders, SICK offers the matching sensor mounting accessories, from clamps to straps.

CLAMPING AND ALIGNMENT BRACKETS

for cuboid/round sensors

Flexible alignment, quick mounting, thanks to ball joints, spring bearings and clever fixing components, SICK sensors are always adjusted quickly, accurately and safely.

SPECIAL ACCESSORIES

for cuboid sensors

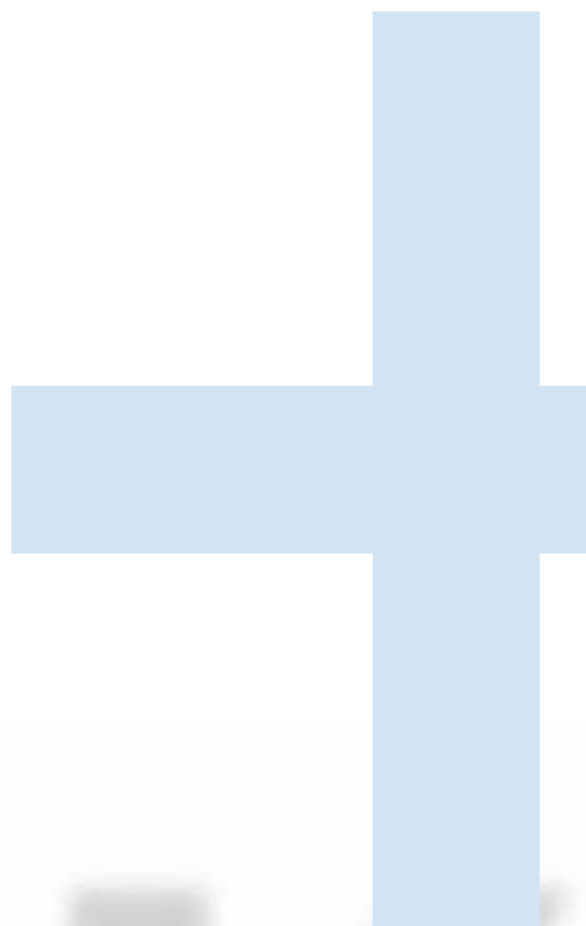

Lens masks, cooling plates and polarisation filters support SICK sensors in critical applications, making an important contribution to system reliability.

TYPES- OVERVIEW

SICK

Universal bar clamp systems – the most flexible solution

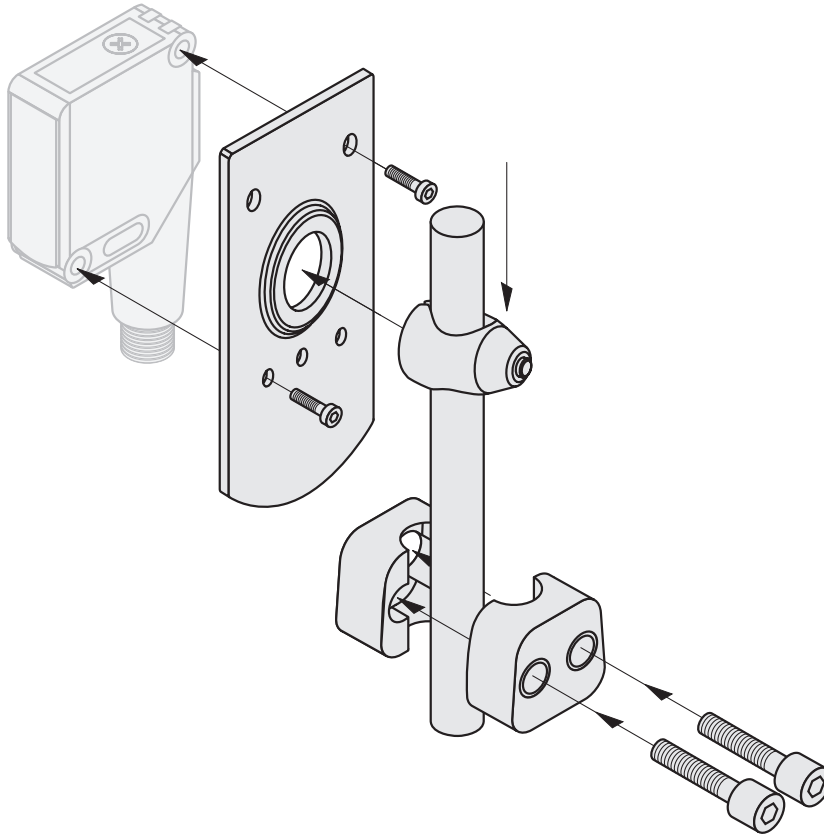

With the SICK universal bar clamp system, equipping industrial installations with SICK sensors is easier than ever before! The large selection of sensor mounting plates, in conjunction with different mounting rods, offers maximum flexibility, secure fixing and versatile alignment options for almost any application. At SICK, you will find everything you need for this!

Clamping and alignment brackets – cleverly mounted

Accurate alignment, quick mounting:
SICK clamping and alignment brackets offer you both, thanks to reliable, intelligent and co-ordinated solutions – from ball joints to spring plates, from dovetail guides to bar mounting clamps.

Protective devices – when it gets dirty

Sensors are used in many different places, and not always clean ones. Moisture, dust, intense sunlight or mechanical stresses can stretch the sensors' capabilities or even destroy them. Protective devices from SICK ensure perfect functionality of the SICK sensors. Even under extreme conditions they counteract harmful environmental effects to protect the sensor.

Mountings for cylinder sensors – the matching connection

Many linear motion sequences in modern industrial installations are pneumatically driven via piston rod cylinders. Accurate position determination of cylinder pistons is crucial to system control. In this field, SICK offers plenty of sensors, of course with matching mounting systems, to fix these sensors safely to the housing of the different piston rod cylinders.

Special accessories – for all extraordinary applications

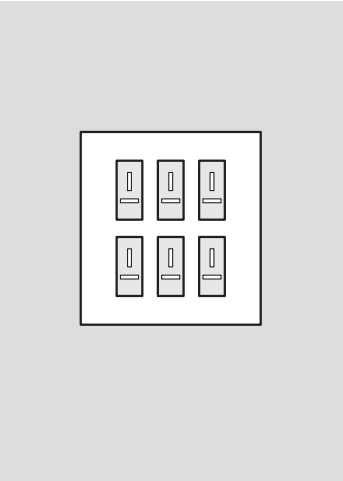

We have thought of everything: polarisation filter for reducing mutual interference of through-beam photoelectric switches, as well as slotted lens masks for focussing the emitted light paths, extend the applications for SICK sensors enormously. And, for high-temperature uses of SICK sensors, cooling plates for water cooling are the ultimate addition.

FACTORY AUTOMATION

With its intelligent sensors, safety systems, and auto idet applications, SICK realises comprehensive solutions for factory automation.

- Non-contact detecting, counting, classifying, and positioning of any types of object
- Accident protection and personal safety using sensors, as well as safety software and services

LOGISTICS AUTOMATION

Sensors made by SICK form the basis for automating material flows and the optimisation of sorting and warehousing processes.

- Automated identification with bar code and RFID reading devices for the purpose of sorting and target control in industrial material flow
- Detecting volume, position, and contours of objects and surroundings with laser measurement systems

PROCESS AUTOMATION

Analyzers and Process Instrumentation by SICK MAIHAK provides for the best possible acquisition of environmental and process data.

- Complete systems solutions for gas analysis, dust measurement, flow rate measurement, water analysis or, respectively, liquid analysis, and level measurement as well as other tasks
