

Product Number: IS-DEM KIT-1
Demonstration Kits

Design flexibility has never been more simple. NKK's SmartSwitch™ product line allows you to design what you want, any way you want it. Our series of LCD programmable switches and displays are developed for use with a wide variety of applications.

NKK has developed a line of products to assist in demonstrating the SmartSwitch™ product series. These demonstration kits (IS-DEM KIT) can be easily used in the customer's final design and are programmed by means of our on-line software or through our stand-alone software provided on CD.

- The IS-DEM KITS are used to display bitmaps, up to 64, that have been created via the user's PC. These kits are supplied with an R/G LCD module software, USB cable and programming instructions. Once downloaded, the bitmaps can be displayed and advanced by means of the address control lines without the need of a PC.
- These kits can be incorporated into the user's end product, as the PCB has been designed with allowance for standoffs.
- The LCD module can be interchanged to meet the user's specific color application.

IS-DEM KIT-1 is for SmartSwitch™
