Description

The SK10/100EL33W is a ÷4 Divider. This device is fully compatible with MC10/100EL33 and MC10/100LVEL33.

The SK10/100EL33W provides a V_{BB} output for either single-ended use or as a DC bias for AC coupling to the device. The V_{BB} pin should be used only as a bias for the SK10/100EL33W as its current sink/source capability is limited. Whenever used, the V_{BB} pin should be bypassed to V_{CC} via a 0.01 μ F capacitor.

The Reset pin is asynchronous and is asserted on the rising edge. Upon power-up, the internal flip-flops will attain a random state. The Reset pin allows for the synchronization of multiple EL33W's in a system.

Notes:

- 10EL circuits are designed to meet the DC specifications shown in the table after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse airflow greater than 500 lfpm is maintained. Outputs are terminated through a 50W resistor to VCC - 2.0V except where otherwise specified on the individual data sheets.
- 100K circuits are designed to meet the DC specifications shown in the table where transverse airflow greater than 500 lfpm is maintained.
- Minimum input swing for which AC parameters are guaranteed.
- CMR range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the high level falls within the specified range and the peak-to-peak voltage lies between $V_{PP(min)}$ and 1V. The lower end of the CMR range varies 1:1 with VEE and is equal to VEE + 1.7V.
- Voltages referenced to VCC = 0V.
- For standard ECL DC specifications, refer to the ECL Logic Family Standard DC Specifications Data Sheet.
- For part ordering description, see HPP Part Ordering Information Data Sheet.
