

- According to IEC/EN 61 812-1
- 8 time ranges from 0,05 s to 300 h selectable via rotational switches
- Impulse and break time separately adjustable
- Selectable start with impulse or break
- Voltage range AC/DC 12 ... 240 V
- Adjustment aid for quick setting of long time values
- Suitable for 2-wire proximity sensor control
- LED indicators for operation, contact position and time delay
- 2 changeover contacts
- As option 1 changeover contact instantaneously programmable
- As option connection of 2 remote potentiometers
- As option with time interruption / time adding input
- Wire connection: also 2 x 1.5 mm² stranded ferruled, or 2 x 2.5 mm² solid DIN 46 228-1/-2/-3/-4
- as option with pluggable terminal blocks for easy exchange of devices
 - with screw terminals
 - or with cage clamp terminals
- 22.5 mm width

Options with pluggable terminal blocks

Approvals and marking

Application

Time-dependent controllers

Indicators

- | | |
|--------------------------------|---|
| green LED: | on when voltage connected |
| yellow LED "R/t": | shows status of output relay and time delay: |
| -Flashing (short on, long off) | output relay not active; time delay t ₂ (break time) |
| -Flashing (long on, short off) | output relay active; time delay t ₁ (pulse time) |

Notes

Removing the terminal blocks with cage clamp terminals

1. The unit has to be disconnected.
2. Insert a screwdriver in the side recess of the front plate.
3. Turn the screwdriver to the right and left.
4. Please note that the terminal blocks can only be mounted on the belonging plug in terminations.

Circuit diagram

Notes

Control of A1-A2 with proximity sensors

The input can be controlled by DC 3 wire or AC/DC 2 wire proximity sensors. For operating voltage > 24 V and usage of sensors without built-in short circuit protection a protection resistor on A1 is recommendend to reduce the inrush current. The dimension is as follows:

$$R_v \approx \text{operating voltage} / \text{max. switching current of sensor}$$

The series resistor must not be selected higher than necessary. Max. values are:

Operating voltage: 48 V 60 V 110 V 230 V
Series resistor R_v max: 270 Ω 390 Ω 680 Ω 1,8 k Ω (1 W)

Adjustment assistance

The flashing period of the yellow LED is 1 s $\pm$ 4% and can be used to adjust the time. Especially on the lower end of scale and for long times it is suitable as the multiplication factors between the different time ranges are exact without tolerance.

Example:

The required time is 40 min. It has to be adjusted within the range 3 ... 300 min. The time check takes too long as several timing cycles would be necessary for a precise value.

For faster adjustment the setting is made to 0.03 ... 3 min. On this range the potentiometer should be set to 0.4 min. (= 24 sec). With the right potentiometer setting the LED must show 24 flashing cycles. After that the time range is switched over to 3 ... 300 min and the setting is complete.

Time interruption / Time adding

With the model MK7854N.82/500 the timing cycle can be interrupted by controlling input B1 (+) with control voltage. Removing the control signal will continue the timing cycle (time addition). When time interrupted the yellow LED stops to flash and goes to continuous light during pulse time (output relay active), or goes off during break time (output relay inactive).

Control input B1

The control input B1 (+) has to be supplied with voltage against A2. The control signal could be the same as the auxiliary/control voltage of A1 or any other voltage between 12 and 240 V AC or DC. Operating a parallel load between B1 and A2 is possible, which allows cost saving circuits.

Instantaneous contact

By external wire lings the output function fo the variant MK 7854N.82/ 500 can be altered from 2 delayed contacts to 1 delayed and 1 instantaneous contact. The instantaneous contact switches when the operating voltage is connected.

To terminals X1 and X2 no other voltage potentials must be connected, as the unit might be damaged.

Notes

Remote potentiometers

With the variant MK 7854N.82/500 both time settings can also be made via remote potentiometers of 10 kOhms:

- Terminals Z1-Z2: potentiometer for pulse time (t1)
- Terminals Z2-Z3: potentiometer for break time (t2)

When connecting a remote potentiometer, the corresponding potentiometer has to be set to min. If no remote potentiometers are required the terminals Z1-Z2 resp. Z2-Z3 have to be linked.

The wires to the remote potentiometers should be installed separately from the lines with mains voltage. If this is not possible, a screened cable is recommendet where the shield is connected to Z2.

To terminals Z1, Z2 and Z3 no external voltage must be connected, as the unit might be damaged.

Standard type

MK 7854N.82 AC/DC 12 ... 240 V 0,05 s ... 300 h

Article number: 0054053

- Output: 2 changeover contacts
- Nominal voltage U_N : AC/DC 12 ... 240 V
- Time ranges: 0,05 s ... 300 h
- Width: 22,5 mm

Variants

MK 7854N.82/500:

- Connection facility for 2 remote potentiometers 10kOhms to adjust pulse and break time
- 2 changeover contacts, one programmable as instantaneous contact
- Additional control input B1 for time interruption / time addition
