

Headphone / speaker amplifier for notebook computers

BA7786FP-Y / BA7787FS

The BA7786FP-Y and BA7787FS are sound amplifiers designed for notebook computers, and contain a suspend function and input pins for the system beep and PM beep sounds used by notebook computers. In short, this single-chip IC contains all the analog audio components needed for notebook computers.

Product	H.P.amp	S.P.amp	Other functions
BA7786FP-Y	Stereo	Stereo	SYSTEM / PM BEEP input, SUSPEND, EVR, MUTE, BEEP level control
BA7787FS	Stereo	Monaural	

●Applications

Notebook computers

●Features

- 1) Stereo headphone amplifier that supports mixing input, along with a stereo speaker amplifier (BA7786FP-Y) or BTL monaural speaker amplifier (BA7787FS).
- 2) Internal anti-pop circuit, to prevent the popping sounds that occur when the power is turned on and off.
- 3) Internal electronic volume switch and mute circuit.
- 4) Separate suspend modes for the headphone amplifier and speaker amplifier, for low-power-consumption computers.
- 5) Two beep input pins, a necessity for notebook computers.

●Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Limits	Unit
Power supply voltage	V _{CC}	6	V
Power dissipation	BA7786FP-Y	850*1	mW
	BA7787FS	600*2	
Operating temperature	T _{opr}	− 10 ~ + 70	°C
Storage temperature	T _{stg}	− 55 ~ + 125	°C

*1 Reduced by 6.8mW for each increase in Ta of 1°C over 25°C.

*2 Reduced by 6.0mW for each increase in Ta of 1°C over 25°C.

●Recommended operating conditions (Ta = 25°C)

Parameter	Symbol	Min.	Typ.	Max.	Unit
Power supply voltage	V _{CC}	4.5	5.0	5.5	V

● Measurement circuit

BA7786FP-Y

Fig.1

BA7787FS

Fig.2

●Circuit operation

(1) Gain between LINE IN L / LINE IN R and HP OUT L / HP OUT R

G_{HP} , the gain when EVR is at its maximum ($V_E = HP V_{CC}$), is calculated as follows:

$$G_{HP} \doteq 20 * \text{LOG} \frac{60k}{1k + R} \text{ (dB)}$$

Set so that $12k \leq R \leq 56k$. This gain attenuates according to the pin 1 DC voltage (V_E) (see Fig. 8). Mixing input can be accommodated by attaching multiple resistors.

(2) Output level between SYSTEM BEEP IN and HP OUT L / HP OUT R

Inputting a pulse wave to SYSTEM BEEP IN causes HP OUT L and HP OUT R to output a pulse wave. The output level of this pulse wave depends on the resistance between pin 7 and GND. The level when EVR is at its maximum ($V_E = HP V_{CC}$) is calculated as follows.

$$V_{HB} \doteq 0.5 * \frac{V_{CC} - 0.7}{13k + R} * 60k \text{ (V}_{P-P}\text{)}$$

(BA7786FP-Y only, BA7787FS: pin 15)

Set so that $R \geq 100k$ ($V_{HB} \leq 1.1V$). As with the path between LINE IN L / LINE IN R and HP OUT L / HP OUT R, this level attenuates according to the pin 1 DC voltage.

(3) Gain between SP IN L / SP IN R and SP OUT L / SP OUT R (BA7786FP-Y)

This is calculated as follows.

$$G_{SP} \doteq 20 * \text{LOG} \frac{32k}{1k + R} \text{ (dB)}$$

Gain between SP IN and SP OUT 1 / SP OUT 2 (BA7787FS)

This is calculated as follows.

$$G_{SP} \doteq 20 * \text{LOG} \frac{32k}{1k + R} \text{ (dB)}$$

(4) Gain between PM BEEP IN and SP OUT 1 / SP OUT 2
This is calculated as follows.

$$G_{SB} \doteq 20 * \text{LOG} \frac{20k}{1k + R} \text{ (dB)}$$

(BA7786FP-Y only, BA7787FS: pin 8)

This path is output regardless of whether LIN MIX ON / OFF is at the high or low level.

(5) Gain between LINE IN L and LCH OUT

(BA7786FP-Y)

This gain (G_{HL}) is calculated as follows.

$$G_{HL} \doteq 20 * \text{LOG} \frac{R8}{2 * R2} \text{ (dB)}$$

This path is not controlled by EVR or the mute function.

(6) Output level between SYSTEM BEEP IN and LCH OUT (BA7786FP-Y)

Inputting a pulse wave to SYSTEM BEEP IN causes LCH OUT to output a pulse wave. The output level of this pulse wave depends on the resistance between pin 7 and GND and between pin 8 and GND, and is calculated as follows.

$$V_{HS} \doteq 0.25 * \frac{V_{CC} - 0.7}{13k + R7} * R8 \text{ (V}_{P-P}\text{)}$$

This path is not controlled by EVR or the mute function.

(7) EVR control characteristics

The headphone amplifier is controlled by changing the resistive potential division ratio.

● Control pins

(1) MUTE CTRL

- Turns the headphone mute function on and off.

	Control signal: V_M	Note
HP MUTE ON	L	Turns off HP AMP output
HP MUTE OFF	H (OPEN)	—

(2) HP SUSPEND

- Turns the headphone suspend function on and off.

	Control signal: V_H	Note
HP SUSPEND	L	The headphone amplifier operates
HP SUSPEND	H	The headphone amplifier turns off

- Because the BA7786FP-Y has a pull-up resistor, this is possible even when open (if at the high level).

(3) SP SUSPEND

- Turns the speaker suspend function on and off.

	Control signal: V_S	Note
SP SUSPEND	L	The speaker amplifier operates
SP SUSPEND	H	The speaker amplifier turns off

- Because the BA7786FP-Y has a pull-up resistor, this is possible even when open (if at the high level).

(4) LINE MIX ON / OFF

- Turns the SP IN input on and off according to SP OUT.

	Control signal: V_L	Note
LINE MIX OFF	L	Stops the output of SP IN input to SP OUT
LINE MIX ON	H (OPEN)	—

(5) MONO / STEREO (BA7786FP-Y)

- Turns SP AMP LCH on and off.

	Control signal: V_N	Note
SP AMP LCH OFF	L	SP AMP LCH turns off
SP AMP LCH ON	H (OPEN)	SP AMP LCH operates

● Operation notes

(1) Popping noises occurring when the power is turned on

- When the power is turned on, the headphone mute function should be on and the suspend function off in order to prevent popping noises from occurring when V_{CC} turns on.

(2) The supply voltages for HP V_{CC} and SP V_{CC} should come from the same power supply. Using separate power supplies can lead to output voltage drops and malfunctioning.

(3) The common impedance of the two power supply lines (HP V_{CC} and SP V_{CC}) should be kept as low as possible.

(4) Make sure the input resistance for the SYSTEM BEEP IN pin is 33k Ω .

(5) Configure the PM BEEP IN pin of BA7786FP-Y as shown below in order to prevent oscillation in the IC.

(6) The LCH OUT pin (pin 8) of BA7786FP-Y should be grounded when not used.

(7) When switching the suspend function popping noises may occur. If this bothers, take measures for eliminating it by attaching external components.

Notes

- No technical content pages of this document may be reproduced in any form or transmitted by any means without prior permission of ROHM CO.,LTD.
- The contents described herein are subject to change without notice. The specifications for the product described in this document are for reference only. Upon actual use, therefore, please request that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document use silicon as a basic material.
Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
