- 2. The entire application environment impacts the thermal resistance values shown, they are not constants and are only valid for the particular conditions
- 3. Psi (Ψ) is used as required per JESD51-12 for packages in which substantially less than 100% of the heat flows to single case surface.
- 4. Surface-mounted on FR4 board using a 650 mm2, 2 oz. Cu pad.
- 5. Maximum current for pulses as long as 1 second is higher but is dependent on pulse duration and duty cycle.
