

### Analog Peripherals

#### 10-Bit Analog to Digital Converter

- Up to 500 ksp/s
- Up to 8 external inputs
- $V_{REF}$  from external pin,  $V_{DD}$ , or internal regulator
- Built-in temperature sensor
- External conversion start input option

#### Comparator

- Programmable hysteresis and response time
- Configurable as interrupt or reset source
- Low current ( $< 0.5 \mu A$ )

### Memory

- 256 bytes internal data RAM
- 8 kB one time programmable code memory

### On-Chip Debug

- C8051F300 can be used as in-system code development platform; complete development kit available
- On-chip debug circuitry facilitates full speed, non-intrusive in-system debug

### Supply Voltage 1.8 to 3.6 V

- On-chip LDO regulator for core supply
- Typical operating current: TBD mA @ TBD MHz:  
TBD  $\mu A$  @ TBD kHz
- Typical stop mode current (regulator off): TBD  $\mu A$
- Built-in brown-out detector

### Temperature Range: $-40$ to $+85$ °C

### Development Kit: C8051T600DK

### High-Speed 8051 $\mu C$ Core

- Pipe-lined instruction architecture; executes 70% of instructions in 1 or 2 system clocks
- 25 MIPS peak throughput with 25 MHz clock
- Expanded interrupt handler

### Digital Peripherals

- 8 port I/O; All 5 V tolerant with high sink current
- Hardware enhanced UART and SMBus™ serial ports
- Three general purpose 16-bit counter/timers
- 16-Bit programmable counter array (PCA) with three capture/compare modules
  - 8 or 16-bit PWM
  - Rising / falling edge capture
  - Frequency output
  - Software timer

### Clock Sources

- Internal oscillator: 24.5 MHz with  $\pm 2\%$  accuracy supports UART operation
- External oscillator: CMOS clock or external capacitor
- Can switch between clock sources on-the-fly; useful in power saving modes

### Package

- 11-pin QFN or 14-pin SOIC
- QFN size = 3x3 mm
