

T1/CEPT/ISDN-PRI TRANSFORMERS

Dual Surface Mount, 1500 Vrms, Small Package

-  Single port T1/E1 solution
-  Configurable for TP and Coax cable termination
-  Transfer-molded, IC-grade packaging
-  UL1950 approved to basic isolation

Electrical Specifications @ 25°C

- Turns Ratio** – The turns ratio of these devices have been designed, in conjunction with semiconductor vendor recommendations, to allow connections to various terminations (e.g. 75 or 120 Ω with the same transformer). For example T1075 can be used with the Siemens PEB 2235 to achieve connection to the 75 or 120 Ω cable. For 75 Ω termination, the PEB 2235 requires the following turns ratio: 1:1.57 (Tx) and 1:1.26 (Rx) which can be achieved using pins (1-2):(15-16) for Tx and (15-16):(1-4) for Rx. Similarly, for 120 Ω , the following turns ratio are required: 1:2 (Tx) and 1:1 (Rx), which are pins (1-2):(16-14) for Tx and (1-4):(16-14) for Rx on the T1075.
- Return Loss** – ITU-T G.703 and European national regulatory documents specify minimum return loss levels. The transformers will

allow these limits to be complied within the situations where they are applicable.

3. Frequency	50-100 KHz	100 KHz-2 MHz	2-3 MHz
Return Loss			
XMIT	9 dB	15 dB	11 dB
REC	12 dB	18 dB	14 dB

- Surge Voltage Capability** – All transformers and chokes meet surge voltage tests according to the most stringent regulatory documents:

Metallic Voltage: 800 V peak, 10/560 μ sec
 Longitudinal Voltage: 2,400 V peak, 10/700 μ sec

- Flammability** – Materials used in the products are recognized as UL94-VO approved. Products meet the requirements of IEC 695-2-2 (Needle Flame Test).
- Safety Agency Recognition** – These parts are recognized to meet Underwriter Laboratories, UL 1950 to basic, per file E133523 (S).
- Common Mode Rejection Ratio** – the CMRR for all transformers is better than 50 dB at 1 MHz. A typical test circuit is shown below.
- Crosstalk Attenuation** – In the dual packages, which contain transmit and receive transformers side by side, sufficient crosstalk attenuation is achieved by the inherent characteristics of the toroid cores as well as by their proper positioning. The crosstalk attenuation is typically 50 dB or better from 100 KHz to 10 MHz. This result was established with the test circuit shown below.
