

DATA SHEET

SKY13588-460LF: 0.1 to 6.0 GHz SP3T Switch

Applications

- WCDMA band and mode switching
- Antenna switch for multimode systems
- 802.11a/b/g/n WLANs
- Industrial IoT
- Lighting
- Smart energy
- Connected home

Features

- Broadband frequency range: 0.1 to 6.0 GHz
- Low insertion loss: 0.45 dB @ 2.5 GHz
- High isolation: 30 dB up to 2.5 GHz
- No external DC blocking capacitors required
- Positive low voltage control: V_{CTL} = 1.65 to 3.00 V, V_{DD} = 2.5 to 4.8 V
- Operating temperature range: -40 °C to +105 °C
- Small QFN (12-pin, 2 × 2 × 0.55 mm) package (MSL1, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Description

The SKY13588-460LF is a CMOS silicon-on-insulator (SOI), single-pole, triple-throw (SP3T) switch. The high-linearity performance and low insertion loss makes the device an ideal choice for WCDMA handset and data card applications.

The SKY13588-460LF SP3T switch is provided in a compact Quad Flat No-Lead (QFN) 2 × 2 × 0.55 mm package. A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

5	V2	DC control voltage 2 (see Table 4)	11	RFC	RF common (antenna) port
6	VDD	DC power supply.	12	GND	Ground

¹ Exposed pad must be grounded.

Functional Description

The SKY13588-460LF includes an internal negative voltage generator and decoder that eliminate the need for external DC blocking capacitors on the RF ports. No external components are required for proper operation. DC decoupling capacitors can be added on the VDD and control lines if necessary.

Switching is controlled by two control voltage inputs (V1 and V2). Depending on the logic voltage level applied to the control pins, the RFC (RF common) pin is connected to one of three switched RF outputs (J1, J2, or J3) through a low insertion path, while the path between the RFC pin and the other RF pins is in a high isolation state.

Shutdown mode is enabled by connecting all control pins to logic low. This mode reduces the overall current consumption of the device to 5 μ A, typical. To prevent the switch from accidentally entering shutdown mode during switching, all states must be set to logic low for at least 20 μ s. When exiting shutdown mode, the switch has a 10.5 μ s startup time before switching occurs.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY13588-460LF are provided in Table 2. Electrical specifications are provided in Table 3.

The state of the SKY13588-460LF is determined by the logic provided in Table 4.

Typical performance characteristics of the SKY13588-460LF are illustrated in Figures 3 through 6.

Table 2. SKY13588-460LF Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage	V _{DD}	2.5	4.8	V
Control voltage ²	V _{CTL}	1.65	3.30	V
Input power	P _{IN}		+39	dBm
Storage temperature	T _{STG}	-40	+125	°C
Operating temperature	T _{OP}	-40	+105	°C

¹ Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

² Any bias voltage applied to the V1 or V2 pin may damage the device if there is no bias voltage also present on the VDD pin. Maximum control voltage cannot exceed V_{DD}.

ESD HANDLING: Although this device is designed to be as robust as possible, electrostatic discharge (ESD) can damage this device.

This device must be protected at all times from ESD when handling or transporting. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD handling precautions should be used at all times.

Evaluation Board Description

The SKY13588-460LF Evaluation Board is used to test the performance of the SKY13588-460LF SP3T switch. The board is made from a two-layer construction with $\frac{1}{2}$ oz. copper cladding on top and bottom. The first layer material is 12-mil Rogers 4003C. The second layer material is 49 mils of FR4 for a total board thickness of about 62 mils. The impedance of all RF traces is $50\ \Omega$.

An Evaluation Board schematic diagram is provided in Figure 7. An assembly drawing for the Evaluation Board is shown in Figure 8.

Package Dimensions

The PCB layout footprint for the SKY13588-460LF is provided in Figure 9. Typical part markings are shown in Figure 10.

Package dimensions are shown in Figure 11, and tape and reel dimensions are provided in Figure 12.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY13588-460LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Notes:

1. All measurements are in millimeters.
2. Dimensions and tolerances according to ASME Y14.5M-1994.
3. Coplanarity applies to the terminals and all other bottom surface metallization.
4. Dimension applies to metallized terminal. If the terminal has a radius on its end, the width dimension should not be measured in that radius area.
