

Chip resistor networks

MNR34 (3216×4 size)

●Features

- 1) Convex electrodes
Easy to check the fillet after soldering is finished.
- 2) Compatible with a wide range of mounting equipment.
Squared corners make it excellent for mounting using image recognition devices.
- 3) High-density mounting
Can be mounted even more densely than four 3216 chips (MCR18). Also, the number of parts and cost of mounting have been reduced.
- 4) ROHM resistors have approved ISO-9001 certification.
Design and specifications are subject to change without notice. Carefully check the specification sheet supplied with the product before using or ordering it.

- Before using components in circuits where they will be exposed to transients such as pulse loads (short-duration, high-level loads), be certain to evaluate the component in the mounted state. In addition, the reliability and performance of this component cannot be guaranteed if it is used with a steady state voltage that is greater than its rated voltage.
