

5 - Volt Fixed Voltage Regulators

Description

The SG109 is a self-contained 5V regulator designed to provide local regulation at currents up to 1A for digital logic cards. This device is available in the hermetic TO-3 and TO-39 packages.

The SG109's design has protective features principally current limiting to control the peak currents and thermal shutdown to protect against excessive power dissipation. These features make the device blowout proof.

With the only added component being an optional input bypass capacitor, this regulator becomes extremely easy to apply. Utilizing an improved Bandgap reference design, problems that are normally associated with the Zener diode references, such as, drift in output voltage and large changes in the line and load regulation have been eliminated.

Features

- Fully Compatible with TTL and DTL
- Output Current in Excess of 1A
- Internal Thermal Overload Protection
- No Additional External Components
- Bandgap Reference Voltage
- Foldback Current Limiting

High Reliability Features

Following are the high reliability features of SG109:

- Available to MIL-STD-883, ¶ 1.2.1
- MSC-AMS level "S" processing available
- MIL-M38510/10701BXA SG109T-JAN

Block Diagram

Figure 1 • Block Diagram

Absolute Maximum Ratings (Note 1)

Input Voltage	35V	Operating Junction Temperature	
Power Dissipation	Internally Limited	Hermetic (K and T Packages).....	150°C
Storage Temperature Range	-65°C to 150°C	Lead Temperature (Soldering, 10 Seconds)	300°C

Note 1. Exceeding these ratings could cause damage to the device.

Thermal Data

K Package:

Thermal Resistance - Junction to Case, θ_{JC} 3.0°C/W

Thermal Resistance - Junction to Ambient, θ_{JA} 35°C/W

T Package:

Thermal Resistance-Junction to Case, θ_{JC} 15°C/W

Thermal Resistance-Junction to Ambient, θ_{JA} 120°C/W

Note A. Junction Temperature Calculation: $T_J = T_A + (P_D \times \theta_{JA})$.

Note B. The above numbers for θ_{JC} are maximums for the limiting thermal resistance of the package in a standard mounting configuration. The θ_{JA} numbers are meant to be guidelines for the thermal performance of the device/pc-board system. All of the above assume no ambient airflow.

Recommended Operating Conditions (Note 2)

Input Voltage Range 7.0V to 25V

Operating Junction Temperature Range

Note 2. Range over which the device is functional.

SG109 -55°C to 150°C

Electrical Characteristics

(Unless otherwise specified, these specifications apply over the operating ambient temperatures for SG109 with $-55^\circ\text{C} \leq T_A \leq 150^\circ\text{C}$ and for $V_{IN} = 10\text{V}$, $I_{OUT} = 500\text{mA}$ (K-package) and $I = 100\text{mA}$ (T-package). Low duty cycle pulse testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.)

Parameter	Test Conditions	SG109			Units
		Min.	Typ.	Max.	
Output Voltage	$T_A = 25^\circ\text{C}$	4.7	5.05	5.3	V
Line Regulation	$V_{IN} = 7.1\text{V to } 25\text{V}$, $T_A = 25^\circ\text{C}$		4.0	50	mV
Load Regulation	$T_A = 25^\circ\text{C}$				
	K-Package: $I_{OUT} = 5\text{mA to } 1.5\text{A}$		15	100	mV
	T-package: $I_{OUT} = 5\text{mA to } 500\text{mA}$		15	50	mV
Total Output Voltage Tolerance	$V_{IN} = 7.4\text{V to } 25\text{V}$				
	K-Package: $I_{OUT} = 5\text{mA to } 1.0\text{A}$, $P \leq 20\text{W}$	4.6	5.0	5.4	V
	T-package: $I_{OUT} = 5\text{mA to } 200\text{mA}$, $P \leq 2\text{W}$	4.6	5.0	5.4	V
Quiescent Current	$V_{IN} = 7.4\text{V to } 25\text{V}$			10	mA
Current Change	With Line : $V_{IN} = 7.4\text{V to } 25\text{V}$			0.5	mA
	With Load: K-Package: $I_{OUT} = 5\text{mA to } 1.0\text{A}$			0.8	mA
	T-package: $I_{OUT} = 5\text{mA to } 200\text{mA}$			0.8	mA
Output Noise Voltage	$f = 10\text{Hz to } 100\text{kHz}$, $T_A = 25^\circ\text{C}$		40		μV
Long Term Stability			10		mV
Ripple Rejection	$T_A = 25^\circ\text{C}$	50			dB

Application Circuits

* Required if regulator is in appreciable distance from power supply filter.

** Although no output capacitor is needed for stability it does improve transient response.

Microsemi Corporation (Nasdaq: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for communications, defense & security, aerospace and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; security technologies and scalable anti-tamper products; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, Calif., and has approximately 3,400 employees globally. Learn more at www.microsemi.com.
