Notes

For inductive loading, without external suppression of the transistor outputs, the following applies:
 $T_{0.95}$ = time in ms, until 95 % of the steady-state current is achieved. $T_{0.95} \approx 3 \times T_{0.65} = 3 \times L/R$.

Data transfer rate in the NET network: bus lengths of 40 m and over only attainable with cables with additional cross-section and connection adapter.
