HLMP-S100, HLMP-S201, HLMP-S301, HLMP-S400, HLMP-S401, HLMP-S501

2 mm x 5 mm Rectangular LED Lamps

Data Sheet

Description

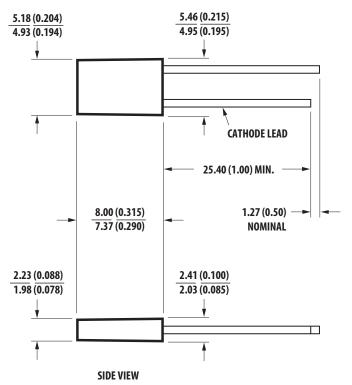

The HLMP-S100, -S201, -S301, -S400, -S401, -S501, are epoxy encapsulated lamps in rectangular packages which are easily stacked in arrays or used for discrete front panel indicators. Contrast and light uniformity are enhanced by a special epoxy diffusion and tinting process.

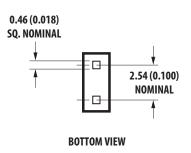

The HLMP-S100 uses double heterojunction (DH) absorbing substrate (AS) aluminum gallium arsenide (AlGaAs) LEDs to produce outstanding light output over a wide range of drive currents.

Features

- Rectangular light emitting surface
- Excellent for flush mounting on panels
- Choice of five bright colors
- Long life: solid state reliability
- Excellent uniformity of light output

Package Dimensions

NOTES:

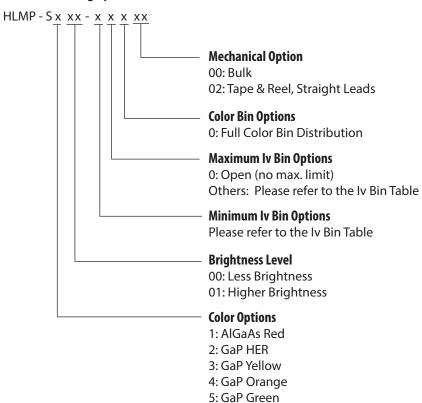

- 1. ALL DIMENSIONS ARE IN MILLIMETERS (INCHES).
- 2. AN EPOXY MENISCUS MAY EXTEND ABOUT 1 mm (0.040") DOWN THE LEADS.
- 3. THERE IS A MXIMUM 1 TAPER FROM BASE TO THE TOP OF LAMP.

Notes:

- 1. $\theta_{1/2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- 2. The dominant wavelength, λ_{cl} , is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.
- 3. Radiant intensity, I_e , in watts/steradian, may be found from the equation $I_e = I_v/\eta_v$, where I_v is the luminous intensity in candelas and η_v is the luminous efficacy in lumens/watt.

Storage Temperature Range	-40 to +100	-40 to +100	-40 to +100	°C

Notes:

- 1. See Figure 5 to establish pulsed operating conditions.
- 2. For AlGaAs Red, Orange, and Green series derate linearly from 50°C at 0.5 mA/°C. For Yellow series derate linearly from 50°C at 0.34 mA/°C.
- 3. The transient peak current is the maximum non-recurring peak current that can be applied to the device without damaging the LED die and wire bond. It is not recommended that the device be operated at peak currents beyond the peak forward current listed in the Absolute Maximum Ratings.

Precautions

Lead Forming

- The leads of an LED lamp may be preformed or cut to length prior to insertion and soldering into PC board.
- If lead forming is required before soldering, care must be taken to avoid any excessive mechanical stress induced to LED package. Otherwise, cut the leads of LED to length after soldering process at room temperature. The solder joint formed will absorb the mechanical stress of the lead cutting from traveling to the LED chip die attach and wirebond.
- It is recommended that tooling made to precisely form and cut the leads to length rather than rely upon hand operation.

Soldering Conditions

- Care must be taken during PCB assembly and soldering process to prevent damage to LED component.
- The closest LED is allowed to solder on board is 1.59 mm below the body (encapsulant epoxy) for those parts without standoff.
- Recommended soldering conditions:

	Wave Soldering	Manual Solder Dipping
Pre-heat Temperature	105°C Max.	_
Pre-heat Time	30 sec Max.	_
Peak Temperature	250°C Max.	260°C Max.
Dwell Time	3 sec Max.	5 sec Max.

- Wave soldering parameter must be set and maintained according to recommended temperature and dwell time in the solder wave. Customer is advised to periodically check on the soldering profile to ensure the soldering profile used is always conforming to recommended soldering condition.
- If necessary, use fixture to hold the LED component in proper orientation with respect to the PCB during soldering process.
- Proper handling is imperative to avoid excessive thermal stresses to LED components when heated.
 Therefore, the soldered PCB must be allowed to cool to room temperature, 25°C, before handling.
- Special attention must be given to board fabrication, solder masking, surface plating and lead holes size and component orientation to assure solderability.
- Recommended PC board plated through hole sizes for LED component leads:

LED Component Lead Size	Diagonal	Plated Through Hole Diameter
0.457 x 0.457 mm	0.646 mm	0.976 to 1.078 mm
(0.018 x 0.018 inch)	(0.025 inch)	(0.038 to 0.042 inch)
0.508 x 0.508 mm	0.718 mm	1.049 to 1.150 mm
(0.020 x 0.020 inch)	(0.028 inch)	(0.041 to 0.045 inch)

Note

Refer to application note AN1027 for more information on soldering LED components.
