

## Subminiature Photoelectric Sensor

## E3T

### Omron's Next Generation of Sub-miniature Photoelectric Sensors

- Utilizes Omron's "Hyper LED" technology to achieve the industry's smallest visible red beam
- Self-contained sensor ideal for space-restricted applications
- "Pin-point" beam for detecting extremely small objects
- Offered in both flat and rectangular body styles
- Retroreflective model employs Omron's Free-Angle Optics technology (FAO) to detect objects as small as 2 mm dia.
- Convergent-beam model spot diameter is 0.15 mm
- Through-beam model is capable of sensing distances of 1 meter with a 2 mm target diameter
- CE conformance
- Robotic cable versions available (See Note 2, below.)

## Ordering Information

### ■ PHOTOELECTRIC SENSORS

| Sensor type      |          |     | Sensing method                                                                                   |                                                                                             |                                                                                                  |                                                                                               |                                                                                                    |            |

|                  | Dark-ON  | NPN | E3T-ST12                                                                                         | E3T-FT12                                                                                    | E3T-SR12                                                                                         | E3T-FD12N                                                                                     | E3T-SL12                                                                                           | E3T-SL22   |
|                  |          | PNP | E3T-ST14                                                                                         | E3T-FT14                                                                                    | E3T-SR14                                                                                         | E3T-FD14N                                                                                     | E3T-SL14                                                                                           | E3T-SL24   |

Note: 1. All through-beam models are packaged and sold as pairs (one transmitter and one receiver).

2. E3T sensors are available with robotic cable. To order, add the letter "R" to the end of the part number. Example: E3T-ST11R

3. 5-M cable models are available. To order, add the designation 5M to the end of the part number. Example: E3T-T11 5M

## ■ ACCESSORIES (ORDER SEPARATELY)

### Slits (Apertures)

| Slits for sensor models | Slit width | Sensing distance | Minimum sensing object (typical) | Comments                          | Part number |
|-------------------------|------------|------------------|----------------------------------|-----------------------------------|-------------|
| E3T-ST1□                | 0.5 dia.   | 50 mm            | 0.5 mm wide                      | One each for Emitter and Receiver | E39-S63     |
|                         | 1 dia.     | 100 mm           | 1 mm wide                        |                                   |             |

| Slits for sensor models | Slit width | Sensing distance | Minimum sensing object (typical) | Comments                          | Part number |
|-------------------------|------------|------------------|----------------------------------|-----------------------------------|-------------|
| E3T-FT1□                | 0.5 dia.   | 50 mm            | 0.5 mm wide                      | One each for Emitter and Receiver | E39-S64     |
|                         | 1 dia.     | 100 mm           | 1 mm wide                        |                                   |             |

### Reflectors

| Item                          | Sensing distance | Minimum sensing object (typical) | Part number           |
|-------------------------------|------------------|----------------------------------|-----------------------|
| Compact retroreflective model | 10 to 200 mm     | 2 mm wide                        | E39-R4<br>(See Note.) |
|                               | 10 to 100 mm     |                                  | E39-R37               |

Note: E39-R4 reflector included with the E3T-SR1□ (can also be ordered separately).

### Adjustable Aperture

| For sensor models | Appearance                                                                        | Part number |
|-------------------|-----------------------------------------------------------------------------------|-------------|
| E3T-ST1□          |  | E39-E10     |

### Mounting Brackets

| For sensor models | Appearance                                                                          | Comments                                                    | Part number |
|-------------------|-------------------------------------------------------------------------------------|-------------------------------------------------------------|-------------|
| E3T-S□            |  | Two mounting brackets are required for through-beam models. | E39-L116    |
|                   |  |                                                             | E39-L117    |
|                   |  |                                                             | E39-L118    |
| E3T-F□            |  |                                                             | E39-L119    |
|                   |  |                                                             | E39-L120    |

## ■ REFLECTORS

### Retroreflector

E39-R4 (Provided with the E3T-SR1□)

**E39-R37 Reflector**

Note: A reflector and a stainless steel mounting plate are supplied together as a set.

## ■ SLITS/APERTURES (ORDER SEPARATELY)

**E39-S63 (Use with E3T-ST1□)**

Shown with Sensor

**E39-S64 (Use with E3T-FT1□)**

Note: Align the notch direction of the slit when installing on the Emitter and Receiver.

**Adjustable Aperture****E39-E10 (Use with E3T-ST1□)**

With the Adjustable Aperture Unit in Place

**Use of E39-E10 Adjustable Aperture (Example Dark-ON: E3T-ST12/ST14)**

For Dark-ON:

1. Mount the unit on the receiver.
2. Set the adjuster of the Unit to Max (factory setting is at Max).
3. Adjust the optical axis (align) and tighten mounting hardware.
4. Place a target between emitter and receiver and gradually turn the adjuster counterclockwise toward the Min side. Stop turning the adjuster when the operation indicator and stability indicator (green) turn ON.
5. Remove the target and confirm that the operation indicator is OFF and the stability indicator (green) is ON.

Note: For Light-ON, adjustment is similar, except that indicators would operate in opposite manner as with Dark-ON.

Unit: mm (inch)

## ■ MOUNTING BRACKETS

E39-L116 (Use with E3T-S□□□) Order Separately

Material: 1.2-mm-thick stainless steel (SS 304)

E39-L116 (Use with E3T-ST1□)

Order brackets separately.

**E39-L117 (Use with E3T-S□□□)**

Material: 1.2-mm-thick stainless steel (SS 304)

**E39-L117 (Shown with E3T-ST1□)**

## Mounting Brackets for E3T-FT1□/E3T-FD1□

## E39-L119

## E39-L119 Shown with E3T-F□1□

## E39-L120

E39-L120  
(Shown with E3T-F□1□)

## Precautions

### Caution

Avoid damage to the E3T: NEVER apply AC power to the E3T.

### ■ AVOID DAMAGE TO THE E3T

- Do not exceed the rated voltage on the E3T.
- Do not short-circuit the load connected to the E3T.
- When supplying power to the E3T, make sure that the polarity of the power is correct.

### ■ OPERATING ENVIRONMENT

To avoid malfunction, DO NOT install the E3T in the following environments:

- Locations where the E3T is exposed to intense sunlight.
- Locations with high humidity and where condensation may result.
- Locations with corrosive gas.
- Locations with vibration or shock affecting the E3T.

### ■ HIGH-TENSION LINES

To avoid Sensor damage or malfunctioning due to induction noise, do not place the power supply lines of the Photoelectric Sensor within the same conduit as power lines or high-tension lines.

### ■ CABLE

The cable can be extended up to 100 m provided that cable thickness does not exceed the 0.3 mm<sup>2</sup> maximum.

### ■ POWER SUPPLIES

If a switching regulator is connected to the E3T, you must ground the FG (frame ground) and G (ground) terminals, or the switching noise of the switching regulator may cause the E3T to malfunction.

### ■ WATER RESISTANCE

- Do not use the E3T underwater, outdoors, or in the rain.
- Use M2 screws and washers to mount the E3T. When mounting the E3T, NEVER strike the E3T with a hammer, or the E3T will lose its watertight properties.

### ■ LOAD SHORT-CIRCUIT PROTECTION

The E3T incorporates a load short-circuit protection function. If the load short-circuits, the output of the E3T will be turned OFF. Recheck the wiring and turn on the E3T again to reset the load short-circuit protection function. The load short-circuit protection function will work if there is a current flow that is 2.4 times larger than the rated load current.

When using an inductance load, be sure that the inrush current will not exceed 2.4 times larger than the rated current.

### ■ CLEANING

DO NOT apply paint thinner when cleaning the E3T. Paint thinner will damage the casing of the E3T.

### ■ INDICATORS

The following graphs indicate the status of each operation level.

Be sure to use the E3T within the stable operating range.

Note: When the E3T's operation level is set to the stable operation range, the E3T will be in its most reliable operation without being influenced by temperature, voltage fluctuation, dust, or mounting changes.

### ■ TURNING ON POWER SUPPLY

- The E3T will be ready for sensing 100 ms after the power is turned ON.
- If the E3T is connected to a power source different from one for loads, be sure to turn ON the power supply to the E3T first.

**NOTE: DIMENSIONS SHOWN ARE IN MILLIMETERS. To convert millimeters to inches divide by 25.4.**
