

FEATURES

- **LOW NOISE FIGURE:**
1.8 dB typical at 12 GHz
- **HIGH ASSOCIATED GAIN:**
7.5 dB typical at 12 GHz
- **$L_G = 0.3 \mu\text{m}$, $W_G = 280 \mu\text{m}$**
- **LOW COST PLASTIC PACKAGING**
- **TAPE & REEL PACKAGING OPTION AVAILABLE**

DESCRIPTION

NE76038 is a high performance gallium arsenide metal semiconductor field effect transistor housed in a plastic package. Its low noise figure makes this device appropriate for use in the second or third stages of low noise amplifiers operating in the 1 - 14 GHz frequency range. The device is fabricated using ion implantation for improved RF and DC performance, reliability, and uniformity. These devices feature a recessed 0.3 micron gate and triple epitaxial technology.

NEC's stringent quality assurance and test procedures ensure the highest reliability and performance.

Note:

1. Typical values of noise figures are those obtained when 50% of the devices from a large number of lots were individually measured in a circuit with the input individually tuned to obtain the minimum value. Maximum values are criteria established on the production line as a "go-no-go" screening test with the fixture tuned for the "generic" type but not for each specimen.
