What is a VCI capsule?

VCI's - How they work.

VCI stands for "volatile corrosion inhibitor". In brief, the VCI method functions such that the VCI capsule slowly emits a vapour and adheres to metal surfaces, interrupting the Electrochemical action, commonly referred to as corrosion, as shown in the diagram below. The condensed VCI molecules prevent corrosion, or reduce it to a minimum, on iron, steel, copper, brass and aluminium.

Zerust capsules work as follows:

When one or more capsules are placed within an enclosure, the vapours are dispersed to all the accessible surfaces by convection. Then provide the protection described. Two complete air changes a day are allowed for in the useful life times. In addition to the capsules a range of tube strips are available to special order.

CODE	PART NUMBER	PROTECTIVE RADIUS	VOLUME PROTECTED (Cubic metres)	USEFUL LIFE	PRICE
S3000	VC1-1	0.3m	.012m	1 Year	£3.75
S3001	VC2-1	0.6m	0.95m	1 Year	£7.45
S3002	VC2-2	0.6m	0.95m	2 Years	£11.95
S3003	VC6-1	1.8m	25.6m	1 Years	£85.00
