JOKER

*DBP pending.

Joker – Does it all. Better.

FASTENER HOLDING FUNCTION.

The Joker's holding function means that nuts and bolts can be held in the jaw and easily positioned where they are needed. Fastening on to the thread can then be done quickly and safely, thanks to the innovative special stop-plate which holds the fastener. No more time-wasting searches for dropped nuts and bolts! After applying and positioning the nut or bolt, fastening can begin immediately – no additional tools required.

Installation of the nut – no additional tools required!

SECURE GRIP ON FASTENERS, THANKS TO LIMIT STOP.

Constant re-positioning of the wrench? Difficulty holding fasteners in confined spaces? Easing off to avoid any risks of injury or fastener damage? That was yesterday. Today, the Joker prevents slipping off of the fastener head with its integrated limit-stop – no longer is the thumb needed to act as a depth stop. This makes things much easier. And allows significantly more force to be applied during fastening jobs.

Avoids slipping off fasteners, for faster work!

SAFER DUE TO ANTI-SLIP EFFECT.

The Joker's clever double-hex geometry delivers a very positive connection with nuts or bolts – it's a perfect fit. And the exchangeable, hardened metal gripping plate in the Joker's mouth literally bites itself into the bolt with its extremely hard tips. Both features combine to prevent any unpleasant slipping, even at higher torque.

Prevents the risk of slipping for fewer injuries.

VERY SMALL RETURN ANGLE.

Less can be more. Particularly in those very confined spaces where conventional wrenches with a 60° return angle literally have to be turned over and over, to tighten and loosen nuts or bolts. Instead of 60°, the Joker only has a 30° return angle thanks to its unique double-hex design.

Along with the Joker's straight neck, this means that flipping the wrench has become a thing of the past. With the Joker, you can now loosen and tighten nuts and bolts, in situations where conventional tools fail, particularly in confined spaces where conventional open-jawed wrenches cannot be used. This is one of the reasons why the Joker is so clever. And it looks great too!

Wrenching without flipping; small return angle of only 30°.

IF YOU NEED A WRENCH,
USE THE JOKER!

The Joker performs fastening jobs in almost every conceivable situation, quickly and with great precision. The ratcheting feature at the ring end boasts an exceptional, fine tooth mechanism – 80 teeth in all – which provides greater flexibility, even in very confined working spaces. The specially forged geometry, in combination with the high-performance chrome-molybdenum steel and nickel-chrome coating, means that you win three times over: longer service life, high resistance to wear and great protection against corrosion.
