Products

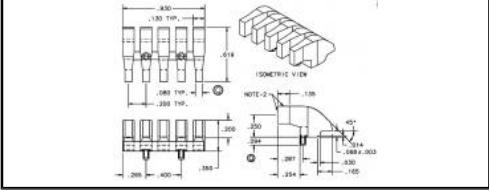

Light Pipes

BrightPipes™ Optical Lightpipes produce bright, even indication based on optical ray tracing. They conveniently and economically conduct light from SMT LEDs through angles and distances to a viewable front lens surface in order to provide an attractive, bright and even indication of equipment or function status with a minimal attenuation of light output through the optical fibers that join the base, at the LED light source, to the lens front.

Part Number: 7511A66-5
Serial Number: 7511
LED type: SMD LED
Type: Right Angle, 5 Wide
Mounting: PCB Press-In Pin
Works with: "1210" SMD LED
Housing ul rating: UL 94-V2
RoHS Status: Yes
