

TUSONIX

DISC CERAMIC CAPACITORS

Ceramic capacitors, because of their inherent reliability, small size, low cost and wide choice of electrical characteristics available, now outsell all other types combined.

TUSONIX manufactures both fixed and variable ceramic capacitors in a broad range of capacitance values, shapes and sizes for the most complete selection in the industry. The most widely used of all are the ceramic disc capacitors which are described in this catalog.

The following pages describe the electrical properties and physical dimensions of TUSONIX's ceramic disc capacitors, capacitance values from 1pF to .06 μ F and D.C. voltage

ratings up to 6000 are included. Within each of the rated voltage classifications a variety of other electrical properties may be selected.

From the standpoint of use, the many ceramic disc capacitors made by TUSONIX can be broadly classified and characterized as follows:

1. **Temperature Compensating** — highest Q, minute capacitance change with temperature, more stable than glass or mica.
2. **Extended Temperature Compensating** — finite and repeatable capacitance change

with temperature, also high Q and stability second only to preceding.

3. **High Dielectric Constant**

— high capacitance, low dissipation factor replaces paper, film, glass, mica in general purpose applications — big-gest seller.

There is considerable overlap in the electrical characteristics of the above categories. This catalog lists the specifications for all significant electrical characteristics so that circuit designers may select the capacitor best suited for each specific application.

TO ORDER:

Specify TUSONIX style number, voltage, TC code, capacitance, tolerance, and any special instructions.

Example:

831-500V-Z5U-1000 pf $\pm 20\%$
20 AWG outside kink leads,
.187 \pm .025" lead length.

Occasionally, to expedite delivery, TUSONIX will use a more stable Hi-K formulation than ordered.

NOTES:

1. Derate to 67% of rated voltage for +125°C operation.
2. Derate to 60% of rated voltage for +125°C operation.
3. For +85°C operation.

Metric dimensions are designated in this catalog in the following manner:

inches	inches/mm
mm

TUSONIK

DISC CERAMIC CAPACITORS

APPLICATIONS AND FEATURES

TUSONIX Ceramic Disc Capacitors offer high performance in a complete range of ratings, values and sizes. The complete line of voltage ratings offers the designer the convenience of selecting the exact capacitor rating required for his application. Where voltage rating is not critical, we recommend our standard 500 volt line.

Temperature Compensating

Ceramic Capacitors (NPO thru N750) are ideal for applications requiring very precisely controlled capacitance change with temperature, high Q and very small capacitance tolerance.

Extended Temperature

Compensating Disc Capacitors (N1500 thru N5600) are capacity sensitive to temperature in varying degrees, and are useful as temperature compensating elements for stabilization over a wide temperature range. They are also widely used in tuning and resonant circuits.

TUSONIX General Purpose or Hi-K

Ceramic Disc Capacitors are available in a broad range of dielectric constants. This allows a wide selection of capacitance values.

PHYSICAL CHARACTERISTICS

1. For D, T & S dimensions, see individual charts.
2. See individual charts for standard wire gauge. All values up to and including 2 kV are available with 20, 22 and 24 AWG leads, except body sizes .655" max. and larger available with 20 or 22 AWG only. All values up to and including 6 kV are available with 20 or 22 AWG leads.
3. Body insulation — conformal coating.
4. Standard max. coating on leads is .125"; closer control is optional at extra cost.
5. Marking — Trademark, Cap, Tol., T.C., and Voltage (Voltage omitted on 500V).

SPECIALS

Special disc products are available from TUSONIX upon request. Details on TUSONIX's approval for U.L. line by-pass capacitors and approval to Mil-C-20 and Mil-C-11015 can be found elsewhere in this catalog.

Special physical requirements are also available. This includes the lead types shown on page 13. Special lead spacing requirements are optional upon request, in addition to the standard nominal lead spacings shown in the capacitance charts.

TUSONIX has an excellent background in High Reliability products, and is well known throughout the industry for quality and reliability. TUSONIX's Engineering Department is at your disposal to answer questions and make recommendations concerning any type of special testing and manufacturing required. We are proud of our years of experience and vast accumulation of data, which we encourage you to use.

AGING

All hi-dielectric constant barium titanate based ceramics have a predictable capacitance aging effect. The effect is a loss of capacitance with time. The loss is an inverse logarithmic function and is based on the capacitance value obtained at a given time after the last heat exposure. By the time the user receives the parts, almost all the aging effects are gone, but from time to time it is possible to get "fresh" parts where the aging rate is still taking place fast enough to be noticeable. It's also possible to start the aging over again if the user subjects the part to prolonged temperatures above 100°C (such as during a potting cure cycle; during high temperature environmental tests, etc.).

HiK TEMPERATURE CHARACTERISTICS

EIA Code	Temperature Range
Z5	-10°C to +85°C
Y5	30°C to +85°C
X5	55°C to +85°C
X7	55°C to +125°C
EIA Code	Maximum Cap. Change
D	+3.3%
E	+4.7%
F	+7.5%
P	+10%
R	+15%
S	+22%
T	+22% to 33%
U	+22% to 56%
V	+22% to 82%
W	+22% to 90%

*Formerly designated TUSONIX-W5.

TEMPERATURE COEFFICIENTS (Temperature Characteristic)

The TUSONIX catalog lists the various temperature characteristics using standard EIA code symbols. The Hi-K characteristics are treated as maximums and parts supplied as a particular type will drift less than the maximum listed. The T.C. characteristic for temperature compensating types is the nominal capacitance change between 25°C and 85°C in parts per million per degree centigrade. The maximum departure (plus or minus) from this nominal is listed in the catalog for values exceeding 10 pF. The table below shows T.C. tolerances for values below 10 pF.

CAPACITANCE TOLERANCE

Nominal Capacitance 10 pF or Less	Code	Nominal Capacitance over 10 pF and all Resistance Values
±.1 pF	A	+50 -20%
+.25 pF	B
