CMOS 8-Bit Microcontroller

TMP88PH41N/UG

The TMP88PH41 is a high-speed, high-function 8-bit single-chip microcomputer incorporating 16-Kbyte one-time PROM. This microcomputer is pin compatible with the TMP88CH41, the mask ROM product. Once a program is written into its internal PROM, this microcomputer operates the same way as the TMP88CH41. By using an adapter socket, the TMP88PH41 can be programmed and verified with a general-purpose PROM programmer in the same way as for the TC571000D/AD.

Product No.	ROM	RAM	Package	Adapter Socket
TMP88PH41UG	16 Kbytes	512 + 128 bytes	P-LQFP44-1010-0.80B	BM11206

Pin Assignment (Top View)

P-LQFP44-1010-0.80B

LQFP44
(10 × 10 mm)

Top pins (left to right, pins 33→23):
P67 (AIN7, DBOUT1) [A7]
P66 (AIN6) [A6]
P65 (AIN5) [A5]
P64 (AIN4) [A4]
P63 (AIN3) [A3]
P62 (AIN2) [A2]
P61 (AIN1) [A1]
P60 (AIN0) [A0]
P47 (CTC) [A15]
P46 (PPG2) [A14]
P45 (SO, TXD) [A13]

Left side pins:
34 VAREF
35 AVDD
36 AVSS
37 (INT0) P10
38 (INT1) P11
39 [A16](INT2, TC1) P12
40 [CE] (DVO) P13
41 [OE] (PPG1) P14
42 [PGM] P15
43 NC
44 NC

Right side pins:
22 P44 (SI, RXD) [A12]
21 P43 (SCK) [A11]
20 P42 (PDU1) [A10]
19 P41 (PDV1) [A9]
18 P40 (PDW1) [A8]
17 P37 (CL1) [D7]
16 P36 (EMG1) [D6]
15 P35 (U1) [D5]
14 P34 (V1) [D4]
13 P33 (W1) [D3]
12 P32 (X1) [D2]

Bottom pins (left to right, pins 1→11):
[VSS] VSS
[XIN] XIN
[XOUT] XOUT
[VPP] TEST
[VDD] VDD
[PMODEC21] (TC3, INT3) P21
[PMODED22] (TC4, INT4, PWM4, PDO4) P22
RESET
[PMODE20] (STOP, INT5) P20
[D0] (Z1) P30
[D1] (Y1) P31

Pin Functions

The TMP88PH41 has MCU and PROM modes.

(1) MCU mode

Pin compatible with the TMP88CH41 (always makes sure the TEST pin is fixed low).

(2) PROM mode

Pin Name (during PROM Mode)	I/O	Functions	Pin Name (during MCU Mode)
A16	Input	Program memory address input	P12
A15 to A8			P47 to P40
A7 to A0			P67 to P60
D7 to D0	Input/output	Program memory data input/output	P37 to P30
$\overline{CE}$	Input	Chip enable signal input	P13
$\overline{OE}$		Output enable signal input	P14
$\overline{PGM}$		Program mode signal input	P15
VPP	Power supply	+ 12.75 V/5 V (Programming power supply)	TEST
V_{DD}		+ 6.25 V/5 V	VDD
GND		0 V	VSS
P21	Input/output	PROM mode setup pins. Fix these pins high.	
P11 to P10			
P22, P20		PROM mode setup pins. Fix these pins low.	
$\overline{RESET}$			
XIN		Attach a resonator (20 MHz) to these pins for self-oscillation.	
XOUT			
AVDD	Power supply	5 V	
VAREF		0 V (GND)	
VASS			

Functional Description

The TMP88PH41 is a one-time PROM version of the TMP88CH41 with its internal mask ROM replaced with one-time PROM. All other configurations and functions are the same as those of the TMP88CH41. (TMP88CH41 RAM size is 512 + 128 bytes.) Immediately after a reset, the TMP88PH41 is in single-clock mode.

1.   Operation Modes

The TMP88PH41 has MCU and PROM modes.

1.1   MCU Mode

The microcomputer is placed in MCU mode by fixing the TEST and VPP pins low.
In this mode, the microcomputer operates the same way as the TMP88CH41 (because the TEST and VPP pins do not have internal pull-down resistors, they cannot be left open while in use).

1.1.1 Program Memory

The TMP88PH41 contains a 16-Kbyte one-time PROM (located at addresses 04000 to 07EFF$_H$ or addresses FFF00 to FFFFF$_H$ during MCU mode and addresses 00000 to 03FFF$_H$ during PROM mode). When using this microcomputer for the purpose of evaluating the system constructed with the TMP88CH41, write a program into the program storage area shown in Figure 1-1.
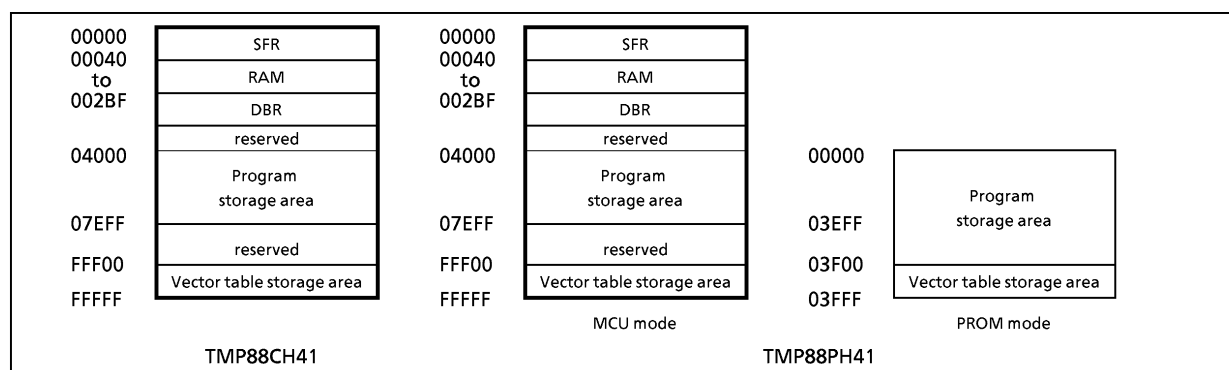

Figure 1-1.   Program Storage Area

Note: Fill the unused area with data FF$_H$, or set up the general-purpose PROM programmer so that only the program storage area will be accessed.

1.1.2 Data Memory

The TMP88PH41 contains 512 + 128-byte data memory (static RAM).

1.1.3 Input/Output Circuits of the Pins

(1)   Control pins

The control pins are the same as those of the TMP88CH41, except that the TEST pin does not have an internal pull-down resistor.

(2)   Input/output ports

The input/output circuits of the TMP88PH41 input/output ports are the same as those of the TMP88CH41.

1.2   PROM Mode

The microcomputer is placed in PROM mode by setting the $\overline{\text{RESET}}$ pin, ports P11 and P10, and ports P22 to P20 as shown in Figure 1-2. In this mode, a program can be written into the microcomputer and verified for by using a general-purpose PROM programmer.

Note: The microcomputer can be programmed in fast programming mode (because settings vary with each PROM programmer used, consult the user's manual of your PROM programmer). Because the TMP88PH41 does not have the electric signature function, set the ROM type of your PROM programmer to be the TC571000D/AD or equivalent.

When using one of the adapter sockets supported by Toshiba, set the switch to the N position.

Figure 1-2.   Setting Up PROM Mode

1.2.1 Programming Flowchart (Fast Programming Mode)

Fast programming mode is entered into by applying a programming voltage of V_{PP} = 12.75 V while V_{CC} = 6.25 V. After setting the valid address and input data, apply a 0.1 ms programming (one-shot) pulse to the $\overline{PGM}$ input, and the data is written into the PROM. Verify whether data has been written into the PROM and if not written into correctly, apply a 0.1 ms programming pulse again. Repeat this (up to 25 times) until data is written into correctly. When data has been written to the set address correctly, proceed to write the next address and input data. When all data has been programmed in this way, set V_{CC} = VPP = 5 V and verify all addresses.

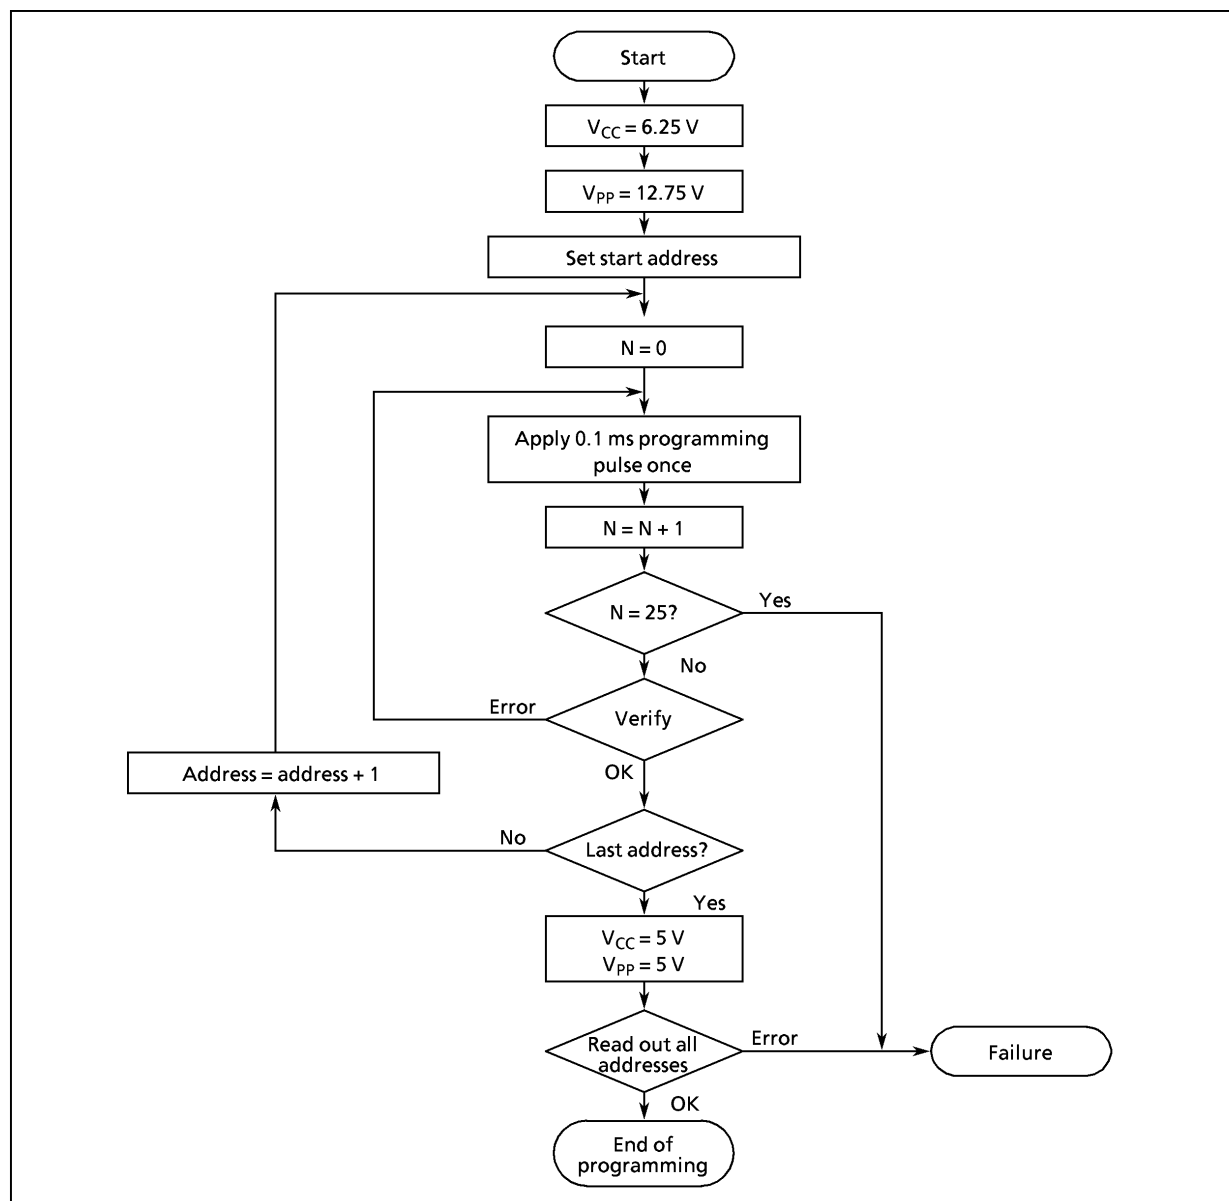

Figure 1-3.   Programming Flowchart

1.2.2 Method of Programming Using a General-Purpose PROM Programmer and Toshiba Adapter Socket

(1)   Preparing the adapter

BM11205: Provided for use with the TMP88PH41N.
BM11206: Provided for use with the TMP88PH41UG.

(2)   Setting up the adapter

Set the switch (SW1) to the N position.

(3)   Setting up the PROM programmer

i)   Set the PROM type for the TC571000D/AD.
Programming voltage: 12.75 V (fast programming mode)

ii)   Transfer data (or copy) (Note 1).
The EPROM of this microcomputer exists in an area at addresses 00000 to 03FFF$_H$. Therefore, data must be transferred (copied) to the addresses at which the program can be written to in PROM mode. For the relationship between program storage areas in MCU and PROM modes, refer to Figure 1-1, "Program Storage Area."

iii) Set the write addresses (Note 1).
     Start address: 00000$_H$
     End address: 03FFF$_H$

(4)   Programming

Write data to the PROM and verify the programmed data following the PROM programmer operation procedure.

Note 1:   For details on how to set, consult the user's manual of your PROM programmer. Make sure the data set in unused address areas all are FF$_H$.
Note 2:   When setting the MCU into the adapter or the adapter into the PROM programmer, make sure the No. 1 pin positions on both sides are matched. If erroneously set in the opposite direction, the MCU, adapter, or PROM programmer may be damaged.
Note 3:   This microcomputer does not support electric signature mode. Therefore, if the PROM programmer is used in electric signature mode, the device may be damaged because a voltage of 12 V ± 0.5 V is applied to the No. 9 address pin (A9). Please do not use electric signature mode.

Electrical Characteristics

Absolute Maximum Ratings	(V_{SS} = 0V)

Parameter	Symbol	Pin	Standard	Unit	Remark
Power Supply Voltage	V_{DD}		− 0.3 to 6.5	V	
Program Voltage	V_{PP}	TEST/VPP	− 0.3 to 13.0		
Input Voltage	V_{IN}		− 0.3 to V_{DD} + 0.3		
Output Voltage	V_{OUT}		− 0.3 to V_{DD} + 0.3		
Output Current	I_{OH}	P1, 3, 4, 6	− 1.8	mA	
	I_{OL1}	P1, 2, 6	3.2		
	I_{OL2}	P3, P4	30		
Mean Output Current	$\Sigma\,I_{OUT1}$	P1, 2, 6	60	mA	Total of all ports except large-current ports
	$\Sigma\,I_{OUT2}$	P3	60		Total of 8 pins of large-current ports P30 to 7
	$\Sigma\,I_{OUT3}$	P4	60		Total of 8 pins of large-current ports P40 to 7
Power Dissipation	PD	TMP88PH41N	600	mW	SDIP
		TMP88PH41UG	350		QFP
Operating Temperature	Topr		− 40 to 85	°C	
Soldering Temperature (time)	Tsld		260 (10 s)		
Storage Temperature	Tstg		− 55 to 125		

Note: The Absolute Maximum Ratings stipulate the standards, any parameter of which cannot be exceeded even in an instant. If the device is used under conditions exceeding the Absolute Maximum Ratings, it may break down or degrade, causing injury due to rupture or burning. Therefore, always make sure the Absolute Maximum Ratings will not be exceeded when designing your application equipment.

Recommended Operating Conditions	(V_{SS} = 0 V, Topr = − 40 to 85°C)

Parameter	Symbol	Pin	Condition		Min	Max	Unit
Power Supply Voltage	V_{DD}		fc = 20 MHz	NORMAL/IDLE/STOP	4.5	5.5	V
High Level Input Voltage	V_{IH1}	Normal (P6, P7)	$V_{DD} \geqq 4.5\,V$		$V_{DD} \times 0.70$	V_{DD}	
	V_{IH2}	Hysteresis (P1, P2, P3, P4, RESET)			$V_{DD} \times 0.75$		
Low Level Input Voltage	V_{IL1}	Normal (P6)	$V_{DD} \geqq 4.5\,V$		0	$V_{DD} \times 0.30$	
	V_{IL2}	Hysteresis (P1, P2, P3, P4, RESET)				$V_{DD} \times 0.25$	
Clock Frequency	fc	XIN, XOUT	V_{DD} = 4.5 V to 5.5 V		8	20	MHz

Note: The Recommended Operating Conditions show the conditions under which we recommend the device be used in order for it to operate normally while maintaining its quality. If the device is used outside the range of Recommended Operating Conditions (power supply voltage, operating temperature range, or AC/DC rated values), it may operate erratically. Therefore, when designing your application equipment, always make sure its intended working conditions will not exceed the range of Recommended Operating Conditions.

DC Characteristics			$(V_{SS} = 0\,V,\ Topr = -40\ to\ 85°C)$				

Parameter	Symbol	Pin	Condition	Min	Typ.	Max	Unit
Input Current	I_{IN1}	TEST	$V_{DD} = 5.5\,V$ $V_{IN} = 5.5\,V/0\,V$	–	–	± 2	μA
	I_{IN2}	Sink open drain, Tri-state					
	I_{IN3}	$\overline{RESET}$, $\overline{STOP}$					
Input Resistance	R_{IN}	$\overline{RESET}$		90	220	510	$k\Omega$
Output Leakage Current	I_{LO}	Sink open drain, Tri-state	$V_{DD} = 5.5\,V,\ V_{IN} = 5.5\,V/0\,V$	–	–	± 2	μA
High Level Output Voltage	V_{OH}	Tri-state port	$V_{DD} = 4.5\,V,\ I_{OH} = -0.7\,mA$	4.1	–	–	V
Low Level Output Current	I_{OL1}	P1, 2, 6	$V_{DD} = 4.5\,V,\ V_{OL} = 0.4\,V$	1.6	–	–	mA
	I_{OL2}	P3, P4	$V_{DD} = 4.5\,V,\ V_{OL} = 1.0\,V$	–	20	–	
Power Supply Current	I_{DDO}		$V_{DD} = 5.5\,V,\ V_{IN} = 5.3\,V/0.2\,V$ $fc = 20\,MHz$	–	18	25	mA
	I_{DDL}			–	16	23	
	I_{DDH}			–	2	100	μA

AD Conversion Characteristics			(Topr = -40 to $85°C$)				

Parameter	Symbol	Pin	Min	Typ.	Max		Unit
					8 bits	10 bits	
Analog Reference Voltage	VA_{REF}	$V_{SS} = 0\,V,\ V_{DD} = AV_{DD}$	$V_{DD} - 1.0$	–	V_{DD}		V
Analog Input Voltage Range	VA_{IN}		V_{ASS}	–	V_{AREF}		
Analog Reference Power Supply Current	I_{REF}	$V_{DD} = AV_{DD} = VA_{REF} = 5.0\,V$ $V_{SS} = AV_{SS} = 0\,V$	–	0.5	1.0		mA
Nonlinearity Error		$V_{DD} = 5\,V,\ V_{SS} = 0\,V$ $AV_{DD} = VA_{REF} = 5\,V$ $AV_{SS} = 0\,V$	–	–	± 1	± 2	LSB
Zero Error			–	–	± 1	± 2	
Full Scale Error			–	–	± 1	± 2	
Overall Error			–	–	± 2	± 4	

AC Characteristics			$(V_{SS} = 0\,V,\ V_{DD} = 4.5\ to\ 5.5\,V,\ Topr = -40\ to\ 85°C)$				

Parameter	Symbol	Pin	Min	Typ.	Max	Unit
Machine Cycle Time	tcy	During NORMAL mode	0.2	–	0.5	μs
		During IDLE mode				
High Level Clock Pulse Width	t_{WCH}	When operating with external clock (XIN input) $fc = 20\,MHz$	–	25	–	ns
Low Level Clock Pulse Width	t_{WCL}					

Recommended Oscillation Conditions	($V_{SS} = 0$ V, $V_{DD} = 4.5$ to 5.5 V, Topr $= -40$ to 85°C)

Parameter	Resonator	Oscillation Frequency	Recommended Resonator	Recommended Constant	
				C_1	C_2
High-frequency oscillation	Ceramic resonator	16 MHz	CSTLS16MOX51-B0 made by Murata Mfg. Co.	(5 pF)	(5 pF)
		20 MHz	CSTLS20MOX51-B0 made by Murata Mfg. Co.	(5 pF)	(5 pF)

(C1, C2 built-in type)

High-frequency oscillation
| Note 1:	When using the device in places exposed to high electric fields as in cathode-ray tubes, we recommend electrically shielding the package in order to maintain the device in normal working condition.
Note 2:	The product numbers and specifications of the resonators by Murata Manufacturing Co., Ltd. are subject to change. For up-to-date information, please refer to the following URL: http://www.murata.co.jp/search/index.html

DC/AC Characteristics (PROM mode)	(V_{SS} = 0 V, Topr = 25 ± 5°C)

(1)   Read Operation

Parameter	Symbol	Condition	Min	Typ.	Max	Unit
Input High Voltage	V_{IH4}		$V_{CC} \times 0.7$	–	V_{CC}	V
Input Low Voltage	V_{IL4}		0	–	$V_{CC} \times 0.12$	
Power Supply Voltage	V_{CC}		4.75	5.0	5.25	
Program Power Supply Voltage	V_{PP}					
Address Access Time	t_{ACC}	V_{CC} = 5.0 ± 0.25 V	–	1.5tcyc + 300	–	ns

Note : tcyc = 200 ns at 20 MHz
(2) High-Speed Programming Operation (Topr = 25 ± 5°C)

Parameter	Symbol	Condition	Min	Typ.	Max	Unit
Input High Voltage	V_{IH4}		$V_{CC} \times 0.7$	–	V_{CC}	V
Input Low Voltage	V_{IL4}		0	–	$V_{CC} \times 0.12$	
Power Supply Voltage	V_{CC}		6.0	6.25	6.5	
Program Power Supply Voltage	V_{PP}		12.5	12.75	13.0	
Initial Program Pulse Width	t_{PW}	V_{CC} = 6.0 V	0.095	0.1	0.105	ms

High-speed program
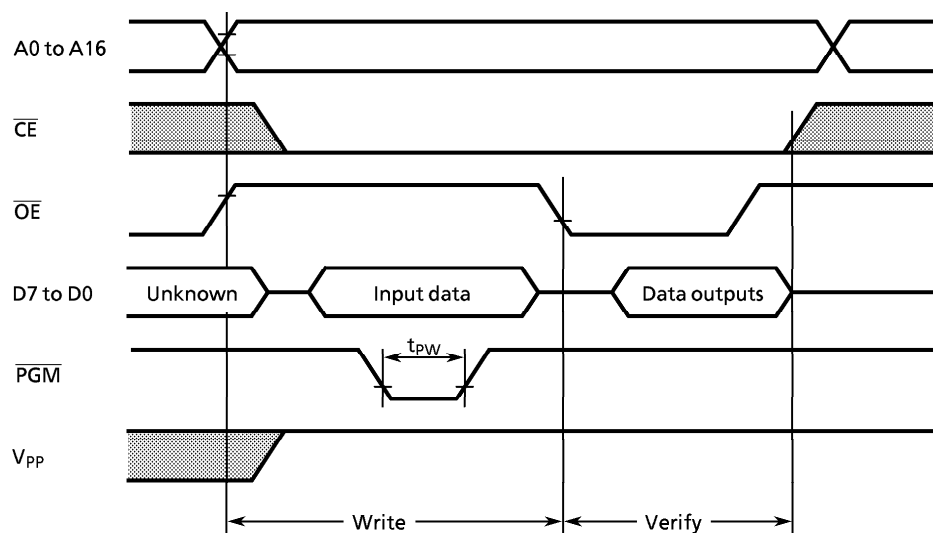

Note 1:	The power supply of V_{PP} (12.75 V) must be set power-on at the same time or the later time for a power supply of V_{CC} and must be clear power-on at the same time or early time for a power supply of V_{CC}.
Note 2:	The pulling up/down device on the condition of V_{PP} = 12.75 V ± 0.25 V causes a damage for the device. Do not pull-up/pull-down at programming.
Note 3:	Use the recommended adapter (see 1.2.2 (1)) and mode (see 1.2.2 (3) i). Using other than the above condition may cause the trouble of the writting.
