Strain Relief Hardware mounting directions

If the target board can be designed to accomodate the strain relief hardware, layout the PCB with the pattern shown on the right. The layout shows the location of non-plated holes through the board relative to the QFN land pattern. If holes can not be added to the target board, the screws can be used as standoffs and sit on the top surface of the target PCB.

Top View: Target Board component layout

notes:

- 1) Do not place components within the shroud outline unless they have a 0.035" height or less off the target board and are outside the QFN package outline
- 2) All components under the POD outline must have a 0.190" height or less from the top of target board to avoid components on the bottom of the POD board.
