

## Quad 58 V TVS for PoE supplies in SO-8

**SO-8**

### Features

- Peak pulse power: up to 2.7 kW (8/20  $\mu$ s)
- Stand-off voltage: 58 V
- 4 unidirectional Transils and 4 decoupling capacitances
- Low clamping voltage: 100 V
- Low leakage current:
  - 0.2  $\mu$ A at 25 °C
  - 1  $\mu$ A at 85 °C
- Operating  $T_j$  max.: 150 °C
- JEDEC registered package outline

### Complies with the following standards

- IEC61000-4-2 level
  - $\pm 15$  kV (air discharge)
  - $\pm 8$  kV (contact discharge)
- IEC61000-4-5 level 2
  - $\pm 1$  kV 42  $\Omega$
- IEEE 802.3af-2003
- IEEE 802.3at-2008

### Description

The **PEP01-5841** has been designed to protect power over Ethernet PSE equipment against line overvoltages. It embeds 4 decoupling capacitors to stabilize power supplies.

It is compatible with IEEE 802.3af-2003 and IEEE 802.3at-2008 requirements and it allows PoE based systems to be protected against both electrical overstress (EOS) and electrostatic discharges (ESD) according to IEC61000-4-5 and IEC61000-4-2.

The low clamping voltage (100 V) makes it compatible with PMOS and PSE controller technologies. Developed in Planar technology, it provides high reliability level.

Packaged in SO-8, it minimizes PCB consumption (footprint in accordance with the IPC 7531 standard).

## 1 Characteristics

Table 1. Absolute maximum ratings ( $T_{amb} = 25^{\circ}C$ )

Symbol	Parameter		Value	Unit
$V_{PP}$	Peak pulse voltage	Peak pulse voltage (IEC61000-4-2 contact discharge)	30	kV
$P_{PP}$	Peak pulse power dissipation	$T_j$ initial = $T_{amb}$	2700	W
$T_{stg}$	Storage temperature range		-65 to +150	°C
$T_j$	Operating junction temperature range		-55 to +150	°C
$T_L$	Maximum lead temperature for soldering during 10 s		260	°C

Figure 11. Typical application circuit with external PMOS

Figure 10. Typical application circuit with PMOS integrated in PSE controller and Figure 11. Typical application circuit with external PMOS show typical application schematics of PoE network. Power sourcing equipment (PSE) allows communication and power sourcing for several power devices (PD). The number of ways is generally a multiple of 4, this optimizes the PEP01-5841 for track layout and crosstalk, as well as PCB surface occupation. This protection device has been studied to comply with the latest IEEE 802.3af-2003 requirements and to withstand the surge defined in the IEC 61000-4-5 level 2 requirements.

### 3 Technical information

**Figure 12. Footprint recommendation for improved clearance dimensions in mm (inches)**

On top of the recommended SO-8 footprint described in [Figure 14. Footprint recommendations, dimensions in mm \(inches\)](#), the above footprint offers a better clearance for voltage higher than 50 V.

## 4 Package information

In order to meet environmental requirements, ST offers these devices in different grades of **ECOPACK** packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com). ECOPACK is an ST trademark.
