

CY SERIES

Cylindrical Photoelectric Sensor

Amplifier Built-in

Cylindrical type easily mountable with M18 thread

M18 thread

This sensor has an M18 thread size for convenient mounting.

Easy to replace

A pigtailed type sensor with connector (CY-□-J), which is easy to replace, is also available.

Long sensing range

Thru-beam type

Retroreflective type

Diffuse reflective type

Wide product range

Supply voltage

- ① AC supply type (24 to 240 V AC)
- ② DC supply type (10 to 30 V DC)

Output

- ① NPN open-collector transistor
- ② PNP open-collector transistor
- ③ AC non-contact (thyristor) output

Connection

- ① Cable type
- ② Pigtailed type

A total of 32 models are available.

Environment resistant

Its IP67 construction can be hosed down with water. In addition, it has strong resistance against vibration since it is filled up with resin.

The connector also has IP67 protection.

Note: However, take care that if it is exposed to water splashes during operation, it may detect a water drop itself.

Convenient options

Side-view attachment (For thru-beam type sensors only)

The beam is bent at a right angle with the side-view attachment.

Slit mask (For thru-beam type sensors only)

It is convenient for detecting small objects or enhancing the sensing accuracy.

APPLICATIONS

Sensing cardboard boxes

Sensing specular objects

Sensing milk packs

PRECAUTIONS FOR PROPER USE

This product is not a safety sensor. Its use is not intended or designed to protect life and prevent body injury or property damage from dangerous parts of machinery. It is a normal object detection sensor.

Mounting

- The tightening torque should be 2 N·m or less.

Retroreflective type sensor with polarizing filters (CY-29□ and CY-19□)

- If a shiny object is covered or wrapped with a transparent film, such as those described below, the retroreflective type sensor with polarizing filters may not be able to detect it. In that case, follow the steps given below.

Example of sensing objects

- Can wrapped by clear film
- Aluminum sheet covered by plastic film
- Gold or silver color (specular) label or wrapping paper

Steps

- Tilt the sensor with respect to the sensing object while fitting.
- Increase the distance between the sensor and the sensing object.

Retroreflective type sensor (CY-27□ and CY-17□)

- Please take care of the following points when detecting materials having a gloss.

- Make L, shown in the diagram, sufficiently long.
- Install at an angle of 10 to 30 degrees to the sensing object.

※CY-29□ and CY-19□ do not need the above adjustment.

Others

- Do not use during the initial transient time (50 ms) after the power supply is switched on.
