## TE Connectivity Online

The TE Connectivity website is an innovative and interactive source for application information, product updates and technical solutions.

Our step-by-step software makes our website intuitive and user-friendly to better serve you!

Please contact us at:

[te.com](http://te.com)

## Product Information Centers

You've got questions? TE's Product Information Centers (PIC) will help you get answers.

Contact a technical product information specialist.

- Email us
- Call us
- Chat with us

Please go to [te.com/help](http://te.com/help) for more information.

## Restriction on the Use of Hazardous Substances (RoHS)

At TE Connectivity (TE), we're ready to support your RoHS requirements. We've assessed more than 1.5 million end items/components for RoHS compliance, and issued new part numbers where any change was required to eliminate the restricted materials. Part numbers in this catalog are identified as:

### RoHS Compliant

Part numbers in this catalog are RoHS Compliant, unless marked otherwise.

These products comply with European Union Directive 2002/95/EC as amended 1 January 2006 that restricts the use of lead, mercury, cadmium, hexavalent chromium, PBB, and PBDE in certain electrical and electronic products sold into the EU as of 1 July 2006.

**Note:** For purposes of this Catalog, included within the definition of RoHS Compliant are products that are clearly "Out of Scope" of the RoHS Directive such as hand tools and other non-electrical accessories.

### Non-RoHS Compliant

These part numbers are identified with a "◆" symbol. These products do not comply with the material restrictions of the European Union Directive 2002/95/EC.

### 5 of 6 Compliant

A "●" symbol identifies these part numbers. These products do not fully comply with the European Union Directive 2002/95/EC because they contain lead in solderable interfaces (they do not contain any of the other five restricted substances above allowable limits). However, these products may be suitable for use in RoHS applications where there is an application-based exemption for lead in solders, such as the server, storage, or networking infrastructure exemption.

**Note:** Information regarding RoHS compliance is provided based on reasonable inquiry of our suppliers and represents our current actual knowledge based on the information provided by our suppliers. This information is subject to change. For latest compliance status, refer to our website referenced below.

### Getting the Information You Need

Our comprehensive on-line RoHS Customer Support Center provides a forum to answer your questions and support your RoHS needs. A RoHS FAQ (Frequently Asked Questions) is available with links to more detailed information. You can also submit RoHS questions and receive a response within 24 hours during a normal work week. The Support Center also provides:

- Cross-Reference from Non-compliant to Compliant Products
- Ability to browse RoHS Compliant Products in our on-line catalog: [te.com/customersupport/productcompliance](http://te.com/customersupport/productcompliance)
- More detailed information regarding the definitions used above

So whatever your questions when it comes to RoHS, we've got the answers at [www.te.com/leadfree](http://www.te.com/leadfree)

## Steckverbinder Bauteilkomponenten/Connector components

### Kabel-Verschraubung

Spezial-Kabelverschraubungen für Schutzarten bis IP 68 und für EMV-Anwendung lieferbar

### Gehäuse-Oberteil

Standard- und korrosionsgeschützte Stecker Gehäuse

- in niedriger oder hoher Bauform
- 4 unterschiedliche Verriegelungssysteme
- unterschiedliche Kabeleingänge: Panzergewinde (PG) metrische Gewinde (M) NPT-Gewinde (NPT)

### Kontakte

Silber- oder Goldoberfläche  
Gedrehte Massivkontakte mit Schraub, Feder oder Crimp-Anschluss

### Stift-Einsatz

Schraub-, Spring Clamp-, oder Crimp-Anschluss

### Buchsen-Einsatz

Schraub-, Spring Clamp-, oder Crimp-Anschluss

### Gehäuse-Unterteil

Standard- und korrosionsgeschützte Anbau-, Sockel-, und Kupplungs-Gehäuse

- Niedrige oder hohe Bauform der Sockel- und Kupplungs-Gehäuse, ohne/mit komplett montiertem Aludeckel
- 4 unterschiedliche Verriegelungssysteme

### Cable fitting

Special cable fittings for protection up to IP 68 and for electro-magnetic compatibility available

### Hood

Standard and corrosion-resistant connector hoods:

- low and high construction
- 4 different locking systems
- different cable entries: PG Thread M Thread NPT Thread

### Contacts

Silver or gold plated  
Solid machined contacts with screw, spring or crimp termination

### Male insert

Screw, Spring clamp or crimp terminal

### Female insert

Screw, Spring clamp or crimp terminal

### Hood and housing

Standard and corrosion-resistant bottom-entry, surface-mounted and cable-to-cable hoods:

- low and high construction (bottom-entry and cable-to-cable hood) with/without aluminium cover
- 4 different locking systems

## Schutzarten von elektrischen Betriebsmitteln

Elektrische Betriebsmittel müssen aus Sicherheitsgründen gegen Einflüsse von außen geschützt werden. Diese Aufgabe übernehmen Gehäuse, die das elektrische Betriebsmittel gegen Berührung, das Eindringen von festen Fremdkörpern, Staub, Feuchtigkeit oder Wasser schützen. Die Norm IEC 529 mit dem Titel „Schutzarten durch Gehäuse (IP-Code)“ bildet die Grundlage für die Bestimmung und Kennzeichnung der Schutzart eines Gehäuses.

Der Umfang der Schutzes (Schutzart) durch ein Gehäuse wird mittels genormter Prüfverfahren nachgewiesen. Zur Einteilung verschiedener Gehäuse bezüglich ihrer Schutzart wird ein Bezeichnungssystem verwendet. Das Bezeichnungssystem besteht aus den Code-Buchstaben IP und zwei nachfolgenden Kennziffern.

### Zusammensetzung des IP – Code (International bzw. Ingress Protection)

Die erste Kennziffer gibt den Berührungs- und Fremdkörperschutz, die zweite den Schutz des Gehäuses gegen das Eindringen von Wasser an. Die folgende Tabelle enthalten Kurzbeschreibung sowie Definitionen der einzelnen Kennziffern des IP-Codes.

### Bedeutung der ersten Kennziffer

Die erste Kennziffer gibt an, inwieweit das Gehäuse Personenschutz gewährleistet. Dieser Schutz wird erreicht, indem das Eindringen eines Körperteils (oder eines Gegenstandes der von einer Person gehalten wird) in das Gehäuse verhindert wird. Gleichzeitig gewährt das Gehäuse dem Betriebsmittel Schutz gegen das Eindringen von festen Fremdkörpern. Dies ist der Grund dafür, dass es zu jeder ersten Kennziffer 2 Beschreibungen und 2 Definitionen gibt.

| Erste Kennziffer | Schutzgrad gegen Zugang von gefährlichen Teilen und gegen feste Fremdkörper                                                   |                                                                                                                                                    |
|------------------|-------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>0</b>         | Nicht geschützt                                                                                                               |                                                                                                                                                    |
| <b>1</b>         | -Geschützt gegen feste Fremdkörper mit Ø 50mm<br>-Geschützt gegen den Zugang zu gefährlichen Teilen mit dem Handrücken.       | Kugel mit Ø 50mm darf nicht voll eindringen                                                                                                        |
| <b>2</b>         | -Geschützt gegen feste Fremdkörper 12,5 mm Durchmesser<br>-Geschützt gegen den Zugang zu gefährlichen Teilen mit einem Finger | Prüffinger mit Ø 12mm muss ausreichend Abstand von gefährlichen Teilen haben.                                                                      |
| <b>3</b>         | -Geschützt gegen feste Fremdkörper Ø 2,5mm<br>-Geschützt gegen den Zugang zu gefährlichen Teilen mit einem Werkzeug           | Prüfsonde mit Ø 2,5mm Durchmesser darf nicht eindringen.                                                                                           |
| <b>4</b>         | -Geschützt gegen feste Fremdkörper Ø 1,0mm Durchmesser.<br>-Geschützt gegen den Zugang zu gefährlichen Teilen mit einem Draht | Prüfsonde mit Ø 1mm Durchmesser darf nicht eindringen.                                                                                             |
| <b>5</b>         | Staubgeschützt                                                                                                                | Eindringen von Staub wird nur soweit verhindert, dass dieser das zufriedenstellende Arbeiten des Gerätes oder die Sicherheit nicht beeinträchtigt. |
| <b>6</b>         | Staubdicht                                                                                                                    | Kein Eindringen von Staub.                                                                                                                         |

## Bedeutung der zweiten Kennziffer

Die zweite Kennziffer gibt an, inwieweit das Gehäuse schädliche Einflüsse auf das Betriebsmittel infolge des Eindringens von Wasser verhindert.

| Zweite Kennziffer | Schutz gegen Wasser                                                   |                                                                                                                                                                                                                                                                                              |
|-------------------|-----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                   | Kurzbeschreibung                                                      | Definition                                                                                                                                                                                                                                                                                   |
| <b>0</b>          | Nicht geschützt                                                       |                                                                                                                                                                                                                                                                                              |
| <b>1</b>          | Geschützt gegen Tropfwasser                                           | Senkrecht fallende Tropfen dürfen keine schädliche Wirkung haben                                                                                                                                                                                                                             |
| <b>2</b>          | Geschützt gegen Tropfwasser, wenn das Gehäuse bis zu 15° geneigt ist. | Senkrecht fallende Tropfen dürfen keine schädliche Wirkung haben, wenn das Gehäuse um einen Winkel bis zu 15° beiderseits der Senkrechten geneigt ist.                                                                                                                                       |
| <b>3</b>          | Geschützt gegen Sprühwasser.                                          | Wasser, das in einem Winkel bis zu 60° beiderseits der Senkrechten gesprüht wird, darf keine schädliche Wirkung haben.                                                                                                                                                                       |
| <b>4</b>          | Geschützt gegen Spritzwasser.                                         | Wasser, das aus jeder Richtung gegen das Gehäuse spritzt, darf keine schädliche Wirkung haben.                                                                                                                                                                                               |
| <b>4K</b>         | Geschützt gegen Spritzwasser mit erhöhtem Druck.                      | Wasser, das aus jeder Richtung mit erhöhtem Druck gegen das Gehäuse spritzt, darf keine schädliche Wirkung haben. (gilt nach DIN 40 050 Teil 9 nur für Straßenfahrzeuge)                                                                                                                     |
| <b>5</b>          | Geschützt gegen Strahlwasser.                                         | Wasser, das aus jeder Richtung als Strahl gegen das Gehäuse spritzt, darf keine schädliche Wirkung haben.                                                                                                                                                                                    |
| <b>6</b>          | Geschützt gegen starkes Strahlwasser.                                 | Wasser, das aus jeder Richtung als starker Strahl gegen das Gehäuse spritzt, darf keine schädliche Wirkung haben.                                                                                                                                                                            |
| <b>6K</b>         | Geschützt gegen starkes Strahlwasser mit erhöhtem Druck.              | Wasser, das aus jeder Richtung als Strahl mit erhöhtem Druck gegen das Gehäuse gerichtet ist, darf keine schädliche Wirkung haben. (gilt nach DIN 40050 Teil 9 nur für Straßenfahrzeuge)                                                                                                     |
| <b>7</b>          | Geschützt gegen die Wirkung beim zeitweiligen Untertauchen in Wasser. | Wasser darf nicht in einer Menge eintreten, die schädliche Wirkung verursacht, wenn das Gehäuse unter genormten Druck- und Zeitbedingungen zeitweilig in Wasser untergetaucht ist                                                                                                            |
| <b>8</b>          | Geschützt gegen die Wirkung beim dauernden Untertauchen in Wasser.    | Wasser darf nicht in einer Menge eintreten, die schädliche Wirkung verursacht, wenn das Gehäuse dauernd unter Wasser getaucht ist unter Bedingungen, die zwischen Hersteller und Anwender vereinbart werden müssen. Die Bedingungen müssen jedoch schwieriger sein als für die Kennziffer 7. |
| <b>9K</b>         | Geschützt gegen Wasser bei Hochdruck-/Dampfstrahlreinigung.           | Wasser, das aus jeder Richtung unter stark erhöhtem Druck gegen das Gehäuse gerichtet ist, darf keine schädliche Wirkung haben. (gilt nach DIN 40 050 Teil 9 nur für Straßenfahrzeuge)                                                                                                       |

## Isolationskoordination für elektrische Betriebsmittel in Niederspannungsanlagen

Bemessung der Luft- und Kriechstrecken nach DIN EN60664-1. (Die folgenden Seiten stellen lediglich einen Auszug der Norm dar und zeigen nicht den vollständigen Inhalt)

### Isolationskoordination

Isolationskoordination umfasst die Auslegung der elektrischen Isolation eines Betriebsmittels hinsichtlich dessen Anwendung und Umgebung.

Dies geschieht einerseits durch Auslegung der Luftstrecken (Basis ist dabei die zu erwartende Überspannung), andererseits durch Auslegung der Kriechstrecken (Basis sind dafür die Betriebsspannungen sowie die Isolierstoffeigenschaften). Weiter werden isolationseigenschaft-verändernde Bedingungen berücksichtigt (Verschmutzung, Schutzmaßnahmen gegen Verschmutzung, Luftdruck, thermische oder chemische Beeinflussung).

**Luftstrecken** werden nach der äußeren oder inneren zu erwartenden Überspannungen bemessen. Die 4 Überspannungsklassen (Überspannungskategorien I bis IV) berücksichtigen die unterschiedliche Verwendung eines Betriebsmittels. Die für die jeweilige Nennspannung des Versorgungsnetzes unterschiedliche Bemessungs-Stoßspannungen ist hierbei die Grundlage.

Je nach Homogenitätsgrad des Feldes zwischen den Elektroden (Fall A – inhomogenes Feld, Fall B – homogenes Feld) können die Luftstrecken aus Tabelle 2a (Mindestluftstrecken) bestimmt werden; Industriesteckverbinder werden immer nach dem „Fall A“ ausgelegt. Der Einfluss durch Verschmutzung wird bei der Festlegung von Luft- und Kriechstrecken durch vier Schärfegrade (Verschmutzungsgrad 1 bis 4) berücksichtigt.

Grundlage der **Kriechstrecken** ist die aus der Betriebsspannung abgeleitete Bemessungsspannung.

Die Mindestkriechstrecken sind in Tabelle 4 den Bemessungsspannungen je nach Verschmutzungsgrad zugeordnet.

Enthalten die Produktbeschreibungen keine zusätzlichen Angaben, sind die in diesem Katalog aufgeführten Produkte nach dieser Bestimmung (DIN EN60664-1) für Überspannungskategorie III und Verschmutzungsgrad 3 bemessen.

### Überspannungskategorie I bis IV

- Betriebsmittel der **Überspannungskategorie I** sind Waren zum Anschluss an die feste elektrische Installation eines Gebäudes. Es ist entweder in der festen Installation oder zwischen der festen Installation und dem Gerät, Maßnahmen zur Begrenzung der transienten Überspannungen getroffen worden.
- Betriebsmittel der **Überspannungskategorie II** sind energieverbrauchende Betriebsmittel, die von der festen Installation gespeist werden.  
Anmerkung: z. B. Haushaltsgeräte, tragbare Werkzeuge und andere Hausgeräte sowie ähnliche Verbraucher.
- Betriebsmittel der **Überspannungskategorie III** sind Bestandteil der festen Installation. Es sind Betriebsmittel, bei denen ein höherer Grad der Verfügbarkeit erwartet wird.  
Anmerkung: Beispiele für solche Geräte sind z.B. Industriesteckverbinder, Verteilertafeln, Leistungsschalter, Verteilungen, Schalter, Steckdosen).
- Geräte der **Überspannungskategorie IV** sind für den Einsatz am Anschlusspunkt der Installation bestimmt.  
Anmerkung: Beispiele für solche Geräte sind Elektrizitätszähler, Überstromschutzschalter und Rundsteuergeräte.

### Verschmutzungsgrad 1 bis 4

In DIN EN60664-1 sind die Verschmutzungsgrade wie folgt definiert:

#### Verschmutzungsgrad 1:

Es tritt keine oder nur trockene, nicht leitfähige Verschmutzung auf. Die Verschmutzung hat keinen Einfluss.

#### Verschmutzungsgrad 2:

Es tritt nur nichtleitfähige Verschmutzung auf. Gelegentlich muss mit vorübergehender Leitfähigkeit durch Betauung gerechnet werden.

#### Verschmutzungsgrad 3:

Es tritt leitfähige Verschmutzung auf oder trockene, nichtleitfähige Verschmutzung, die leitfähig wird, da Betauung zu erwarten ist.

#### Verschmutzungsgrad 4:

Es tritt eine dauernde Leitfähigkeit auf, hervorgerufen durch leitfähigen Staub, Regen oder Nässe.

### Isolierstoff

Die Isolierstoffe werden entsprechend ihren Vergleichszahlen der Kriechwegbildung (Comparativ Tracking Index) CTI in folgende vier Gruppen eingeteilt:

|                     |                             |
|---------------------|-----------------------------|
| Isolierstoff I:     | $600 \leq \text{CTI}$       |
| Isolierstoff II:    | $400 \leq \text{CTI} < 600$ |
| Isolierstoff III a: | $175 \leq \text{CTI} < 400$ |

## Bemessung der Luftstrecken

### Schema zur Ermittlung der Luftstrecken

| Bemessungs-Stoßspannung für Betriebsmittel (Tabelle 1) |                                   |                                                                                |                                                                              |                                                                                    |                                                                |

1) Die Spannung ist

- für Funktionsisolierung: die höchste an der Luftstrecke zu erwartende Stoßspannung;
  - für Basisisolierung, falls direkt oder wesentlich beeinflusst durch transiente Überspannung aus dem Niederspannungsnetz: die Bemessungs-Stoßspannung des Betriebsmittels;
  - für andere Basisisolierung: die höchste Stoßspannung, die im Stromkreis auftreten kann;
- \_ ) Vorzugswerte

**Höhen-Korrekturfaktoren (Tabelle 2 b)**

| Höhe in m | Normaler Luftdruck in kPa | Multiplikationsfaktor für Abstände |
|-----------|---------------------------|------------------------------------|
| 2000      | 80,0                      | 1,00                               |
| 3000      | 70,0                      | 1,14                               |
| 4000      | 62,0                      | 1,29                               |
| 5000      | 54,0                      | 1,48                               |

Tabelle 4

## Degree of protection provided by enclosures

For safety reasons, electrical equipment needs to be protected against outside influences. The basis for the determination is the standard IEC 529 titled 'Degree of protection provided by enclosures (IP – Code)'.

Using a standardized test procedure the extent of the protection class is verified. To classify different housings according to their protection class, a designation system is used which consists of the code – letters 'IP' and two code numbers.

### Arrangement of the IP – Code (International bzw. Ingress Protection)

### Meaning of the 1st characteristic numeral

The first numeral describes the protection of the housing against intrusion of foreign bodies as well as the protection of people against dangerous parts or influences. Because of this, there are two descriptions and definitions for each of the first code letter.

| 1st numeral | Protection against solid objects and against access to hazardous parts                                                              |                                                                                                                                                                |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | short description                                                                                                                   | definition                                                                                                                                                     |
| <b>0</b>    | no protection                                                                                                                       |                                                                                                                                                                |
| <b>1</b>    | -protection against solid foreign bodies of Ø 50mm<br>-protection against access to hazardous parts with the back of a hand         | A sphere of Ø 50mm, must not intrude                                                                                                                           |
| <b>2</b>    | -protection against solid foreign bodies of Ø 12 mm<br>-protection against access to hazardous parts with the finger                | A sphere of Ø 12mm diameter, must not intrude                                                                                                                  |
| <b>3</b>    | -protection against solid foreign bodies of 2,5 mm diameter and bigger<br>-protection against access to hazardous parts with a tool | A sphere of Ø 2,5mm diameter, must not intrude                                                                                                                 |
| <b>4</b>    | -protection against solid foreign bodies of 1,0 mm diameter and bigger<br>-protection against access to hazardous parts with a wire | The probe, sphere of Ø 1,0mm, must not intrude                                                                                                                 |
| <b>5</b>    | protected against dust                                                                                                              | The infiltration of dust is not completely prevented, but it does not infiltrate to such an extent that the operation or the safety of the device is affected. |
| <b>6</b>    | dust proof                                                                                                                          | No infiltration of dust                                                                                                                                        |

## Meaning of the 2nd characteristic numeral

The second numeral describes the protection of the housing against the intrusion of water with harmful effects.

| second code digit | Protection degrees against the intrusion of water, designated by the second code digit |                                                                                                                                                                                                                                                          |
|-------------------|----------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                   | short description                                                                      | definition                                                                                                                                                                                                                                               |
| <b>0</b>          | not protected                                                                          |                                                                                                                                                                                                                                                          |
| <b>1</b>          | protected against dripping water                                                       | Vertically falling drops shall have not harmful effects.                                                                                                                                                                                                 |
| <b>2</b>          | protected against dripping water when the housing is at an angle of up to 15°          | Vertically falling drops shall have not harmful effects when the enclosure is tilted upto 15°                                                                                                                                                            |
| <b>3</b>          | protected against water spray                                                          | Water sprayed at an angle up to 60°, shall have no harmful effects                                                                                                                                                                                       |
| <b>4</b>          | protected against splash water                                                         | Water splashed against the enclosure from any direction shall have no harmful effects                                                                                                                                                                    |
| <b>4K</b>         | protected against splash water with increased pressure                                 | Water splashed against the enclosure with increased pressure from any direction shall have no harmful effects (Applies acc to DIN 40050 - 9 only for road vehicles)                                                                                      |
| <b>5</b>          | protected against jets of water                                                        | water splashes against the enclosure from any direction as a water jet shall have no harmful effects                                                                                                                                                     |
| <b>6</b>          | protected against strong jets of water                                                 | water splashes against the enclosure from any direction as a strong water jet shall have no harmful effects                                                                                                                                              |
| <b>6K</b>         | protected against strong jets of water with increased pressure                         | water splashes directly against the enclosure from any direction as a strong water jet with increased pressure, shall have no harmful effects (Applies acc to DIN 40050 - 9 only for road vehicles)                                                      |
| <b>7</b>          | protection against the effects of temporary submersion in water                        | Quantity of water that ingresses an enclosure, when it is temporarily immersed under standardized conditions of pressure and time, shall have no harmful effects.                                                                                        |
| <b>8</b>          | protection against the effects of continuous submersion in water                       | Quantity of water that ingresses an enclosure, when it is continuously immersed under conditions of pressure and time, shall have no harmful effects. The conditions must, however be harder than for code digit 7 and agreed between user and producer. |
| <b>9K</b>         | Protected against water during high-pressure / jet-stream cleaning.                    | Water that is directed against the housing with greatly increased pressure from any direction must not have any detrimental effect (Applies acc to DIN 40050 - 9 only for road vehicles)                                                                 |

## Insulation Coordination for Electrical Connectors in Low Voltage Plants

Dimensioning of Clearance and Creeping Distances acc. to DIN EN60664-1; following pages show only a part of the standards

### Insulation Coordination

Insulation coordination includes the design of the electrical insulation of a connector depending on its use and environment. This occurs either by design of the clearance distances (basis is the expected power surge) or by design of the creeping distance (basis is the operating voltage as well as the quality of the insulating material). Furthermore, insulation-changing conditions are taken into account (pollution, protective measures against pollution, air pressure, thermal or chemical influences).

Air distances are measured according to the outer or inner power surge expected. The four power surge classes (power surge categories I to IV) take the different use of the connector into account.

Depending on the homogeneity of the field between the electrodes (case A – inhomogenous field, case B – homogenous field) the air distances can be determined according to table 2a (minimum air distances); industrial connectors are always determined according to case A.

The influence from pollution when determining the air- and **creeping distances** is taken into account by using four degrees of severity (pollution degree 1 to 4).

Basis of the creeping distances is the rated voltage which is deduced from the operating voltage.

The minimum creeping distances are allocated in table 4 depending on the severity of pollution.

If the product descriptions do not contain any additional information the products listed in this catalogue were rated according to norm DIN VDE 0110 for surge category III and severity of pollution 3.

### Surge Category I to IV

- resources of surge category I are goods for the termination of fixed electrical installations of a building. Measures for the limitation of transient surges were taken either in the fixed installation or between the fixed installation and the equipment.
- resources of surge category II are resources which use power and are fed from a fixed installation.  
Note: e. g. domestic appliances, portable tools and other appliances as well as similar consumers.
- resources of surge category III are part of a fixed installation. They are resources from which a high degree of availability is expected.  
Note: Examples for such appliances are e.g. industrial connectors, distribution panels, power switches, distributors, switches, sockets).
- Devices of surge category IV are for use at the supply terminal of the installation.  
Note: Examples for such appliances are electricity counters, overload cut-out switches and Rundsteuergeräte.

### Pollution Degree 1 to 4

DIN VDE 0110 defines the pollution degrees as follows: :

#### Pollution Degree 1:

There is no or only dry, non-conductive pollution. The pollution is without influence.

#### Pollution Degree 2:

There is only non-conductive pollution. Occasional momentary conductivity due to condensation.

#### Pollution Degree 3:

There is conductive pollution or dry non-conductive pollution, which becomes conductive due to condensation.

#### Pollution Degree 4:

There is a continuous conductivity due to conductive dust, rain or moisture.

### Insulation Material

The insulation materials are divided into the following four groups depending on their comparative tracking index (CTI) :

|                            |                             |
|----------------------------|-----------------------------|
| Insulation material I:     | $600 \leq \text{CTI}$       |
| Insulation material II:    | $400 \leq \text{CTI} < 600$ |
| Insulation material III a: | $175 \leq \text{CTI} < 400$ |

1) This voltage is

- for functional insulation:  
the maximum impulse voltage expected to occur across the clearance
- for basic insulation directly exposed by transient overvoltages
- for other basic insulation

Table 4

## Technische Kennwerte Serie HF/Technical specifications Series: HF

### Crimphülse

- Optimale Materialanpassung entsprechend der Kundenapplikation
- Anpassung auf spezielle Leiterquerschnitte und Verarbeitungswerkzeuge
- Verwendung der gleichen Crimphülse für Stift-, Buchsen- und Erdkontakt
- Robuste widerstandsfähige Crimphülse für vielfältige Industrieanwendungen

② Kontaktträger

③ Adapter

④ Crimphülse

### Stift-/ Buchsenkontakt

- Verschleißarmes Basismaterial
- Austausch der Einzelteile durch modularen Aufbau
- Oberflächenveredlung gemäß Kundenanwendungsanforderung
- Reduzierung der Steck-/Ziehkräfte um 30%
- Erhöhung der Steckzyklen um 50%
- Variable Anschlußtechnik

### Crimp ferrule

- Optimum material adaptation according to customer's application
- Adaptation to special customer wire size and crimping tools
- Same crimp ferrule for male, female and grounding contact
- Robust crimp ferrule for tough industrial applications

Male contact

② Insulating material plastic

③ Adapter

④ Crimp ferrule

### Male/female contact

- Wear-resistant basic material
- Worn parts can be individually exchanged
- Surface coating according to customer application
- 30% reduced mating and pulling forces
- 50% increase of making cycles
- Variable wire termination

## Technische Kennwerte Serie MDL/Technical specifications series MDL

- Modular aufgebaute Kontakteinsätze - Baugröße 3-4-6-8-10-12
- Optimale Flexibilität, leichtes Handling, schnelle Montage
- Rationelle Mischbestückung zur Lösung anwenderspezifischer Kundenanforderungen
- Halterahmen zur Aufnahme der variabel einsetzbaren Module, baugleich für Ober- und Unterteil
- Reduzierung der Lagerbestandskosten
- Polarisierter Einsatz der Module in einem Halterahmen
- Leistungs- und Signalübertragung über einen Steckverbinder
- Voreilende Schutzkontakte
- Elektromagnetisch verträgliche Module für Bussystem-Schnittstellen

- Modular contact inserts – sizes 3-4-6-8-10-12
- Optimum flexibility, easy handling, quick assembly
- Rational mixing of connectors, i. e. application specific customer requirements can be solved
- Fixing frame to hold the interchangeable modules, same design for upper and lower part
- Storage costs are reduced
- Polarized use of the modules in a fixing frame
- Power- and signal transmission with one connector
- Leading grounding contact
- Modules, tolerant to electro-magnetic waves, for bus system interfaces

**Vorschriften** DIN VDE 0110 für Luft- und Kriechstrecken  
DIN VDE 0627 für Steckverbinder und Steckvorrichtungen

**Zulassungen** UL, CSA

**Modulbaustein**

**Verschmutzungsgrad** 3

**Werkstoff** thermoplastischer Formstoff

**Temperaturbereich** - 40°C + 125°C

**Brennbarkeit** nach UL 94 V-0

**Regulations** DIN VDE 0110 for clearance and tracking distance  
DIN VDE 0627 for connectors, plugs and sockets

**Approvals** UL, CSA

**Module element**

**Degree of contamination** 3

**Material** thermoplastics

**Temperature range** - 40°C + 125°C

**Flammable** acc. to UL 94 V-0

## Anschlussarten/Termination types

### • Schraubanschluss Screw connection

### • Spring Clamp-Anschluss Spring Clamp connection

### • Crimpanschluss Crimp connection

## Schraubanschluss/Screw terminal

### Schraubanschluss

Der Schraubanschluss ist die bekannteste Anschlussart. Ihre Bemessung erfolgt nach VDE 0609. Anzugs- und Prüfdrehmomente entnehmen Sie bitte nebenstehender Tabelle.

|                                      |              |            |            |              |            |            |
|--------------------------------------|--------------|------------|------------|--------------|------------|------------|
| Leiterquerschnitt (mm <sup>2</sup> ) | 1            | 1,5        | 2,5        | 4            | 6          | 10         |
| Schraubengewinde                     | <b>M 2,6</b> | <b>M 3</b> | <b>M 3</b> | <b>M 3,5</b> | <b>M 4</b> | <b>M 4</b> |
| Prüfdrehmoment Ncm                   | 40           | 50         | 50         | 80           | 120        | 120        |

Das Diagramm zeigt den Streubereich der Ausziehungskräfte der Leiter aus der Schraubverbindung eines Kontaktelementes mit Klemmschutz. Klemmschraube: M 3  
Prüfdrehmoment: 50 Ncm

mit Drahtschutz/with wire protection

Die einschlägigen Bestimmungen sagen aus:

- Serien HE, HSB-Klemmen  
**mit Drahtschutz:**  
Ausser dem Abisolieren ist kein besonderes Herrichten der Leiterenden erforderlich.

### Screw terminal

The screw terminal is the most common type of connection. Ratings are based on VDE 0609. Please refer to the table at the left for torques.

Wire cross section (mm<sup>2</sup>)

Thread

Test torque Ncm

The diagram shows the force range for pulling the conductor out of the screwed connection of a contact element with wire protection.

Clamp screw: M 3  
Test torque: 50 Ncm

The relevant regulations stipulate:

- Terminals of series HE, HSB  
**with wire protection:**  
No special preparation of wire ends required except for stripping.

## Crimpkontakte/Crimp contacts

Die moderne Crimp-Anschlußtechnik weist gegenüber Schraub- oder Lötanschlüssen wesentliche technische und wirtschaftliche Vorteile auf.

Zum Crimpen werden ein- oder mehrdrähtige Leiter eingesetzt. Der Crimpvorgang kann durch Crimp-Handzangen oder für die Serienfertigung mit halb- oder vollautomatischen Crimpmaschinen erfolgen. Mit Vollautomaten geschieht das Abisolieren der Leiter und das Crimpen der Kontakte maschinell in einem Arbeitsgang. Mit Hilfe dieser Crimpwerkzeuge wird der Anschlußbereich des Crimpkontaktes verformt und somit eine feste, gasdichte Verbindung mit dem Leiter hergestellt.

HTS bietet wirtschaftliche und technische Vorteile mit zwei weltweit verbreiteten Crimpsystemen:

- Präzisions-gedrehte HE, HN.D, HVT, HSM, HSL und HSS-Massiv-Crimpkontakte.
- Präzisions-gestanzte HD.M-Crimpkontakte.

1. Die gleichbleibende Crimpqualität garantiert einen konstanten Durchgangswiderstand.
2. Korrosionsfestigkeit durch annähernde Kaltverschweißung.
3. Vorkonfektionierung von Kabelbäumen mit Crimpkontakten.
4. Wesentlich höhere Verdrahtungsgeschwindigkeit.
5. Das Lösen bereits gesteckter Kontakte ist mit speziellem Lösewerkzeug möglich.

Auswahlhilfe Silber/Goldkontakte:

Die Auswahl o.g. Materialien sollte vor folgendem Hintergrund stattfinden:

**Verschleiß** ist auf Grund der Härte der Goldoberfläche bei vergoldeten Kontakten geringer, was auch höhere Steckzyklen erlaubt. Auch ist die Steckkraft bei vergoldeten Kontakten geringer. Das **Widerstandsverhalten** bei Gold ist konstanter aufgrund der geringeren Reaktionsfreudigkeit: Silber reagiert mit Schwefel und bildet eine dünne Oxidschicht aus. Diese Schicht wird beim Stecken problemlos durchbrochen bzw. von größeren Strömen „verbrannt“.

Unserer Erfahrung nach ist ein Einsatz von Goldkontakten nur bei Signal-Stößen und -Spannungen aufgrund des sehr konstanten (zeitlich) Widerstandsverhalten notwendig. Bei Anwendungen >5mA und >5V ist der Einsatz von Silberkontakten aus wirtschaftlichen Gesichtspunkten sinnvoller.

In nebenstehender Grafik ist diese Strom/Spannungs Auswahl zusammengefaßt.  
Spez. Widerstand: Gold: 0,022 Vmm\_/m  
Silber: 0,015 Vmm\_/m

F crimp for HD.M contacts

Viereck Crimpung  
Square section crimping

State-of-the-Art crimping technology is superior to screw or solder terminals compared to technical and economic perspectives.

Solid or multi strand conductors can be used for crimping. Crimping is done with manual crimping tools or semi-automatic crimping machines. Fully automatic machines perform all processes from stripping the conductor to crimping the contacts in a single step. The crimping tools connect the contact and the conductor by applying pressure to the connection area of the contact, thus creating a reliable, gas-tight termination.

HTS offers technical and economic advantages with two world-wide proven and acknowledged crimping systems:

- precision-screw machined solid crimp contacts HE, HN.D, HVT, HSM, HSL and HSS.
- precision-stamped HD.M crimp contacts

1. The constant crimp quality ensures a constant resistance.
2. Connection is almost cold-welded, giving corrosion resistance to the termination.
3. Preparation of cable harness with crimp contacts.
4. Faster termination times.
5. Crimped contacts can be removed with a special tool.

How to choose between silver- or gold-plated contacts:

The choice of either silver- or gold-plated contacts should be made considering the following:

The surface of gold-plated contacts is harder, which means less wear and tear and enables higher mating cycles. The mating force of gold-plated contacts is lower as well.

Gold's resistance performance is more constant due to its low reactivity. Silver reacts with sulphur and forms a thin oxidation layer. When mating this layer can be broken through or 'burnt off' by higher currents.

Our experience has shown that the use of gold-plated contacts is only necessary with signal currents and voltages when very constant resistance performance is required. From an economic point of view it makes more sense to use silver-plated contacts for applications of >5mA and >5V. The graphic shown left is the current/voltage choice.

Resistance: Gold: 0,022 Vmm\_/m  
Silver: 0,015 Vmm\_/m

## Crimpkontakte HE/HA Serie/Crimp contacts HE/HA series

16A

Bezeichnung  
Description

Werkstoff: Kupferlegierung  
 Oberfläche:  
 - hartversilbert  
 - hartvergoldet  
 Durchgangswiderstand:  $\leq 1 \text{ m}\Omega$   
 Crimpanschluss:  
 - mm<sup>2</sup> 0,5 - 4,0 mm<sup>2</sup>  
 - AWG 20 - 12

Material: Copper alloy  
 Finish:  
 - hard silver  
 - hard gold  
 Contact resistance:  $\leq 1 \text{ m}\Omega$   
 Crimp terminal:  
 - mm<sup>2</sup> 0,5 - 4,0 mm<sup>2</sup>  
 - AWG 20 - 12

HE/HA – Gedrehte Crimpkontakte/Screw machined crimp contacts

## Crimpkontakte HVT Serie/Crimp contacts HVT series

16A

Bezeichnung  
Description

Werkstoff: Kupferlegierung  
 Oberfläche:  
 - hartversilbert  
 - hartvergoldet  
 Durchgangswiderstand:  $\leq 3 \text{ m}\Omega$   
 Crimpanschluss:  
 -  $\text{mm}^2$  0,13 - 4,0  $\text{mm}^2$   
 - AWG 20 - 12

Material: Copper alloy  
 Finish:  
 - hard silver  
 - hard gold  
 Contact resistance:  $\leq 3 \text{ m}\Omega$   
 Crimp terminal:  
 -  $\text{mm}^2$  0,13 - 4,0  $\text{mm}^2$   
 - AWG 20 - 12

HVT – Gedrehte Crimpkontakte/Screw machined crimp contacts  
 Querschnittskennzeichnung/Designation of cross section

| Kennzeichnung<br>Designation | Leiterquerschnitt<br>Wire cross section | Abisolierlänge der Litze<br>Stripping length |

## Crimpkontakte HSM Serie/Crimp contacts HSM series

40A

Bezeichnung  
Description

Stiftkontakt/Pin contact

Buchsenkontakt/Socket contact

Werkstoff: Kupferlegierung  
 Oberfläche:  
 - hartversilbert  
 - hartvergoldet  
 Durchgangswiderstand:  $\leq 3 \text{ m}\Omega$   
 Crimpanschluss:  
 - mm<sup>2</sup> 0,75 - 10,0 mm<sup>2</sup>  
 - AWG 20 - 6

Material: Copper alloy  
 Finish:  
 - hard silver  
 - hard gold  
 Contact resistance:  $\leq 3 \text{ m}\Omega$   
 Crimp terminal:  
 - mm<sup>2</sup> 0,75 - 10,0 mm<sup>2</sup>  
 - AWG 20 - 6

HSM – Gedrehte Crimpkontakte/Screw machined crimp contacts

## Kontakte (Optik) HD-LWL Serie/Contacts (Optics) HD-LWL series

### LWL-Kontakte (Optik)

Kontakt-Werkstoff Ms,  
Zentrierhülse-Werkstoff  
Zusammenstellung:

verzinnt und rostfreier Stahl  
Thermoplast  
kurzer Kontakt mit Zentrierhülse  
langer Kontakt

Einfügungsdämpfung  
Steckhäufigkeit  
Betriebstemperatur  
Kabelhaltekraft im Kontakt [N]  
Kontakthaltekraft im Modul  
Leitungstyp 1mm Plastik-Lichtwellenleiter  
mit 2,2mm Mantel  
Crimpanschluß

### LWL-contacts (optics)

Contact-material Ms,  
Material of centering ferrule  
assembly:

tin-plated and stainless steel  
thermoplastics  
short contact with centering ferrule  
long contact

insertion loss  
mating frequency  
Operating temperature  
holding power of the cable in the contact [N]  
contact retention force in the module  
cable type 1mm plastic-fiber optics  
with 2,2mm sleeve  
Crimp connection

Passende Kabelverschraubungen ab Seite 188/Suitable Cable fittings from page 188

## HIP.6/16, HIP-K.6/16, EMV-K.6/16 Gehäuse/Housings

## Baugröße/Size 3

**HIP:** Druckdicht, silbergrau, **HIP-K:** Korrosionsgeschützt, schwarz

**EMV-K:** Schutz gegen elektromagnetische Beeinflussung, druckdicht, korrosionsgeschützt, schwarz

**HIP:** Pressure-tight, silver-grey, **HIP-K:** Housings corrosion-resistant, black

**EMV-K:** Protection against electro-magnetic interference, pressure-tight, housings corrosion-resistant, black

## Schraubverriegelung am Oberteil/Screw lock on hood

**Maßbild mm**  
**Dimensions mm**

The diagram shows three views of a cable gland:

- Top View:** Shows a rectangular base with mounting flanges. Dimension **B** indicates the total width.
- Front View:** Shows the profile of the gland. Dimension **A** is the bottom width. The vertical distance between the centerlines of the two main mounting sections is labeled as **\*19,5**.
- Side View:** Shows the depth of the component. Dimension **C** is the top width, **D** is the height, and **E** is the depth. The distance between the centers of the two main mounting sections is labeled as **27**.

Mounting holes are specified as **M3x10**.

**\*Abstand für sichere Kontaktabgabe max. 21 mm**

### Merkmale

- Befestigung der Rastelemente am Kontakteinsatz ohne Werkzeug
- Funktionalität durch robuste Ausführung
- Bedienerfreundliches Handling
- Höchstmass an Flexibilität
- Kostensenkung durch rationelle Verarbeitung und Entfall der Metallgehäuse
- Platzsparende Montage
- Verwendbar für alle Kontakteinsätze der Baugrößen 3, 4, 6, 8
- Montagekostenreduktion durch Vorassemblage

### Characteristics

- fixing of the locking elements on the contact insert without tools
- practicality due to solid execution
- user-friendly handling
- highest degree of flexibility
- cost reduction due to economic finish and omission of metal housings
- space-saving assembly
- can be used for all contact inserts of the sizes 3, 4, 6, 8
- cost reduction due to pre-assembly

Schraubverbindung für Kontakteinsätze/Screw connection for contact inserts

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Bestelltext<br>Designation | Bestell-Nr.<br>Order No. |

## Kodierung/Coding

### Kodierungsmöglichkeiten Codings

Kodierungsmöglichkeiten mit Sperrbolzen  
Für Gehäuse mit 1 Kontakteinsatz

*Coding with code pins*

*For housings with 1 contact insert*

Mit 2 Kontakteinsätzen/with 2 contact inserts

Kodierungen mit Führungsstiften und -buchsen verhindern weitestgehend ein Schrägstecken und -ziehen des Steckers. Schräglage nach DIN EN 175.301-801 in Längsrichtung  $\pm 5^\circ$ .  
*Coding with guide pins and bushes prevents angular plugging and unplugging the connector.*  
*Max. angle as per DIN EN 175.301-801 (longitudinally)  $\pm 5^\circ$ .*

Für Gehäuse mit 1 Kontakteinsatz

*For housings with 1 contact insert*

Für Gehäuse mit 2 Kontakteinsätzen

*For housings with 2 contact inserts*

### Bezeichnung Description

#### Sperrbolzen Code pin

Pro Steckverbinder werden 4 Sperrbolzen benötigt  
*4 code pins are required per connector*

Sti = Stifteinsatz/Male insert

Bu = Buchseneinsatz/Female insert

▲ = Sperrbolzen/Code pin

+ = Befestigungsschraube/Fixing screw

*Fixing screw*

#### Führungsstifte- und buchsen Guide pins and bushes

#### Führungsbuchse Guide bush

#### Führungsstift Guide pins

Sti = Stifteinsatz/Male insert

Bu = Buchseneinsatz/Female insert

● = Führungsstift/Guide pin

○ = Führungsbuchse/Guide bush

+ = Befestigungsschraube/Fixing screw

*Fixing screw*
