OMRON

FL series Lighting for Image Processing

Next generation ODR technology

» Uniform and Stable Radiant Light

» **Super High Brightness**

» Flexible Mounting and Installation

realizing

Sharp images enabled by homogeneous high power lighting

A sharp image, with a high contrast is the precondition for a stable inspection in image processing. This requires a powerful and stable illumination in the field of view (FOV) of an application.

The new Omron FL series represents the ideal lighting solution to achieve this target. The innovative ODR technology defines a new dimension in brightness and ensures, that there is always enough light for your application.

The intelligent light controller simplifies the setup of the light. An easy adjustment of the light intensity or synchronization with the camera trigger is supported. Furthermore the FL series is easy to install and to adjust. Change the angle or distance to the working area in seconds and reduces significantly the effort in operation.

Sharp and Bright Images

High-brightness ODR Lighting

Four times the brightness of conventional LEDs can be achieved with ODR lighting (Optical Double Reflection) that uses a complete new optics technology.

High-brightness illumination was achieved by increasing light efficiency and heat dissipation, making it possible to input images this sharply for the first time.

Homogeneous Lighting

Uniform Illumination Across a Wide Field of View

Brightness is not the only thing necessary for a stable inspection process.

The FL Series evenly illuminates a broad field of view without any inconsistencies.

This enables a stable inspection process.

Easy to use

Easy and Secure Installation, Light Adjustment, and Control

To create an ideal lighting environment more easily and in a shorter time, the structure and operations for installation and adjustment are completely simplified, which makes the FL Series the ideal system for any application.

High-luminance ODR Lighting - beyond the Limitations of LEDs

– High-brightness Models –

The Highest Brightness in the Industry*

ODR lighting is the latest optics technology and has been invented during the development of a compact image processing camera with built-in lighting.

ODR is defining a new dimension in brightness, and enables the highest light efficiency in the industry.

**OMRON Investigation in November 2010*

Cutting Edge ODR Optics Technology (Patent Pending)

Standard Shell-type LEDs

The light created with standard LED lighting has limited efficiency for illumination. It is possible to increase brightness, but doing so causes problems, such as deterioration of the LEDs caused by increased heat.

ODR Lighting

By applying our unique optics technology for an ODR structure to surface mounted chips with high heat dissipation and light efficiency, ODR achieves brightness levels that are approximately 4 times higher than conventional technologies.

Stable Inspection for High-speed applications

Even on high-speed lines where lack of brightness inevitably results in blurred images, ODR makes it possible to produce stable images without reducing the line speed.

Inspection is not possible because of workpiece blurring or a lack of brightness.

Complete extraction of edges and characters.

Bright Even through a Polarizing Filter

Because previous brightness levels were insufficient, using a polarizing filter resulted in dark images and made it impossible to create sharp images of the workpiece.

With ODR lighting, the brightness in the field of view can be maintained even through a polarizing filter. This allows to cut out only the reflected light from glossary areas, and create bright evenly lit images.

It is impossible to detect the workpiece because of reflections from the film.

The image becomes dark overall and the workpiece cannot be detected.

The reflections from the transparent filter is cut and the both the workpiece itself and the characters on it can be detected.

High Brightness in a Small Package

It is possible to provide sufficient illumination by using a smaller light.

It is not necessary to use a large light to achieve the necessary brightness or customize lights to fit into small spaces.

Highest inspection stability with Uniform, wide-area Illumination

– Wide Area Models –

Uniform and wide-area Illumination over the Field of View

The uniform illumination area* is broader than previous lighting systems (up to 1.5 times).

By illuminating uniformly from corner to corner over the field of view, a sharp image of the workpiece is created to stabilize inspections and measurements.

*Area of illumination with a relative illuminance of 0.50 or higher.

Illumination Distribution Chart*

Wide Range of Working Distance

The area of uniform illumination for the FL Series is wide and the working distance that can be handled by 1 light is approximately 2 times larger than of a standard light.

This gives more flexibility for the installation location of the light.

Inspection in the Corners

The FL Series consistently illuminates the field of view, so it is not necessary to change the inspection parameters for the central or outside areas. Thanks to the uniform illumination, the same inspection results can be achieved in corners or center of the FOV.

Standard Lighting

It was necessary to create different inspection standards for each section

FL Series

With uniform lighting from corner to corner, it is possible to inspect

Easy Handling for Changing Field of View

The inspection area is wide, so even if the camera's field of view changes because of a change in the product model or production line, it is possible to use the same lighting

Standard Lighting

A slight increase in the work distance results in images that are dark and unclear.

FL Series

Even if the work distance is increased, the images are bright and inspections are stable.

Cover a Broad Area with One Model

There is a broad area of stable illumination, and this increases the area that can be covered with one product model.

*The graph data are reference values.
*WD=Work Distance

Simple Installation and Control

Easy Design and Installation

Bar Lighting Fit in any location.

Wiring

The cable can extend from either direction, allowing for horizontal or vertical wiring layouts on the mounting surface.

Mounting and Adjustment

The light is structured for mounting with nuts to an arm on the back or side surfaces. Minute changes in the position can be achieved by sliding the light.

Specialized mounting brackets enable mounting at a flexible angle.

Ring Lighting smallest and lightest in the industry- the FL Series can fit in places where lights could not be installed before.

Size

The superior brightness of ODR lights enables an adequate illumination with a smaller unit. It is possible to mount lighting even in narrow locations.

Installation Distance

Because a large area in the field of view can be inspected, the installation location can be selected more flexibly.

Light Weight

With the lightest body in the industry, this light can be attached to thin arms and fixtures. The arms won't be distorted by the weight.

Easy Control and Adjustment of the Lighting

Lighting Controller

With a compact design small enough to fit in the palm of your hand, the Controller can be built into the control panel or in the gap between production lines.

By using the longest lighting cable in the industry (25 m), the Controller can be installed along with the image processing monitor in a variety of locations. It is possible to adjust the lighting while looking at the screen.

Connect to a Remote Control Panel

Mount to a DIN Rail underneath the Line or in the Gap between Tables

Lighting Control without Programming

This enables light emission synchronized with the camera using essentially any trigger, such as a photoelectric sensor. The Controller be connected to an image processing device to control lighting without any programming on a PLC.

[Control Output]

- PNP/NPN compatible
- Power source: 24 V

[Lighting Emission Controls]

- Lighting triggers can be used individually for each channel.
- Lighting delay and lighting time can be controlled.

Intuitive Digital Light Controls

Digital adjustment of light emission makes it easy to reproduce the lighting environment after line switchovers.

The quantity of light is displayed digitally in 400 levels. Adjust the light in fine detail.

▲ Increases brightness

▼ Decreases brightness

The highest level of brightness in the industry.

These Bar Lighting are structured for adaptable wiring and mounting.

High-brightness Models

Wide Area Model

Model

Standard Models	Model	Light color
Wide Area Model	FL-BR5020W	White LEDs
High-brightness Models	FL-BR5020W-H	
Wide Area Model	FL-BR9120W	
High-brightness Models	FL-BR9120W-H	
Wide Area Model	FL-BR13120W	
High-brightness Models	FL-BR13120W-H	

Illumination Structure

Lighting Intensity Distribution Characteristics

High-brightness Models (FL-BR9120W-H)

Wide Area Model (FL-BR9120W)

Application

Standard Lighting

It is difficult to read characters with low contrast.

FL Series

Sharp images are created of both two-dimensional codes and characters.

Ratings and Specifications

Model	Wide Area Model	High-brightness Models	Wide Area Model	High-brightness Models	Wide Area Model	High-brightness Models

(*1) no use for FL-STC10

(*2) no use for FL-STC15

Electrical Specifications

Output circuit	Input circuit
NPN Open-collector 30VDC 50mA max. ON:residual voltage 1.2V max. OFF:leakage current 0.1mA max.	ON: Connected to 0 V or 1.5 V max. OFF: Open (Leakage current: 0.1 mA max.)

Electrical Specifications

Output circuit	Input circuit
PNP Open-collector 50mA max. ON:residual voltage 1.2V max. OFF:leakage current 0.1mA max.	ON: Connected to power supply voltage or power supply voltage - 1.5 V max. OFF: Open (Leakage current: 0.1 mA max.)

Wiring diagram

Pin No.	Signal	Signal direction	Function
DI1	D1	Input	Bit 1 of light control data (least significant bit)
DI2	D2	Input	Bit 2 of light control data
DI3	D3	Input	Bit 3 of light control data
DI4	D4	Input	Bit 4 of light control data
DI5	D5	Input	Bit 5 of light control data
DI6	D6	Input	Bit 6 of light control data
DI7	D7	Input	Bit 7 of light control data
DI8	D8	Input	Bit 8 of light control data
DI9	D9	Input	Bit 9 of light control data (most significant bit)
DI10	CLR	Input	Error reset input.Errors are reset when the error reset input changes from OFF (open) to ON.
DI11	SEL	Input	Lighting control channel selection input . OFF (open) specifies channel 1, ON specifies channel 2.
DI12	SAVE	Input	The light control data (D1 to D9) is saved in the built-in memory when the input changes from OFF (open) to ON.
DI13	TRIG1	Input	Inputs the light emission trigger signal for channel 1.
DI14	TRIG2	Input	Inputs the light emission trigger signal for channel 2.(*)
DO1	ERR	output	Turns ON when an error occurs.

*An input with the same function as the lighting emission trigger input is also available on the terminal block (pins 1 and 2).When using the trigger input, connect the input line only to the parallel connector or only to the terminal block.It is not possible to use both input lines at the same time.

Read and Understand this Catalog

Please read and understand this catalog before purchasing the product. Please consult your OMRON representative if you have any questions or comments.

Warranty and Limitations of Liability

WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall the responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

Application Considerations

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of the product in the customer's application or use of the product.

Take all necessary steps to determine the suitability of the product for the systems, machines, and equipment with which it will be used.

Know and observe all prohibitions of use applicable to this product.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

PROGRAMMABLE PRODUCTS

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

Disclaimers

CHANGE IN SPECIFICATIONS

Product specifications and accessories may be changed at any time based on improvements and other reasons. Consult with your OMRON representative at any time to confirm actual specifications of purchased product.

DIMENSIONS AND WEIGHTS

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

PERFORMANCE DATA

Performance data given in this catalog is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.
