features

- 5-Pin SC-70 (SOT-323) Package
- Supply Current of 9 μA (Typ)
- Power-On Reset Generator With Fixed Delay Time
  - TPS3800 = 100 ms
  - TPS3801 = 200 ms
  - TPS3802 = 400 ms
- Precision Supply Voltage Monitor 1.8 V, 2.5 V, 2.7 V, 3 V, 3.3 V, 5 V, and Adjustable
- Manual Reset Input (Except TPS3801–01)
- Temperature Range . . . –40°C to 85°C

applications

- Applications Using DSPs, Microcontrollers, or Microprocessors
- Wireless Communication Systems
- Portable/Battery-Powered Equipment
- Programmable Controls
- Intelligent Instruments
- Industrial Equipment
- Notebook/Desktop Computers

description

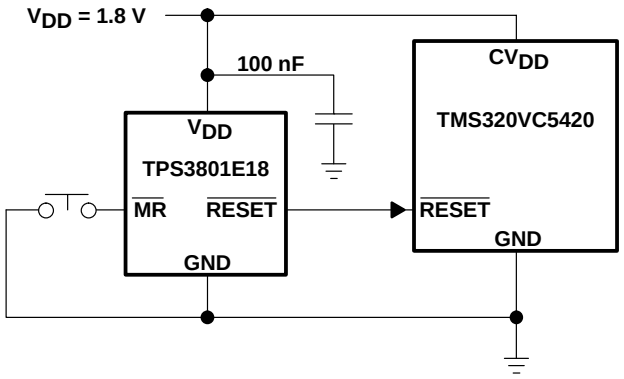
The TPS380x family of supervisory circuits provide circuit initialization and timing supervision, primarily for DSPs and processor-based systems.

During power-on, $\overline{\text{RESET}}$ is asserted when the supply voltage V_{DD} becomes higher than 1.1 V. Thereafter, the supervisory circuit monitors V_{DD} (or SENSE) and keeps $\overline{\text{RESET}}$ active as long as V_{DD} (or SENSE) remains below the threshold voltage (V_{IT}). An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time (t_d) starts after V_{DD} (or SENSE) has risen above the threshold voltage (V_{IT}). When the supply voltage drops below the threshold voltage (V_{IT}) the output becomes active (low) again. No external components are required. All the devices of this family have a fixed sense-threshold voltage (V_{IT}) set by an internal voltage divider, except for the TPS3801–01, which can be customized with two external resistors at the SENSE input.

The TPS380x devices, except the TPS3801–01, incorporate a manual reset input ($\overline{\text{MR}}$). A low level at $\overline{\text{MR}}$ causes $\overline{\text{RESET}}$ to become active.

The product spectrum is designed for supply voltages of 1.8 V, 2.5 V, 2.7 V, 3 V, 3.3 V, and 5 V. The circuits are available in a 5-pin SC-70 (SOT-323) package, which is only about half the size of a 5-pin SOT-23 package.

typical applications



The TPS3801–01 can monitor voltages as low as 1.14 V, depending on the configuration of the external resistor divider.

The TPS380x devices are characterized for operation over a temperature range of –40°C to 85°C.

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to GND. For reliable operation, the device should not be operated at 7 V for more than t=1000h continuously.
