 - The average current for each cycle does not exceed the maximum allowable DC forward current
 - The maximum amplitude of the ripple does not exceed the maximum peak pulsed forward current
3. At $\leq 50\%$ duty cycle with pulse width of 5ms.

Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

LUXEON 2835 with FreshFocus Technology LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

A B C D

Where:

- A** – designates luminous flux bin (example: R=48 to 52 lumens, T=56 to 60 lumens)
- B C** – designates correlated color bin (example: JD, JE, JF, JG, JH for Bread parts)
- D** – designates forward voltage bin (example: V=3.0 to 3.1V, W=3.0 to 3.1V)

Therefore, a LUXEON 2835 with FreshFocus Technology with a lumen range of 48 to 52, color bin of JD and a forward voltage range of 3.0 to 3.1V has the following CAT code:

R J D W

Luminous Flux Bins

Table 5 lists the standard luminous flux bins for LUXEON 2835C with FreshFocus Technology emitters. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all CCTs.
