

Wera tools for better working results.

Together with its more than 600 employees and in just over 70 years, the company with its main office at Wuppertal, Germany has developed into one of the world's leading manufacturers of quality wrenches and screwdrivers for the professional.

Developments and production is state-of-the-art and fully incorporates the most recent know-how in the fields of metallurgy and process technology. The process-oriented quality assurance system ensures for a multiple level of security and exceeds the requirements of DIN EN 9001. The consequence of this is that the rate of claims is close to zero.

Wera

What can take you beyond the limit?

ZYKLOP

will take
you beyond
the limit !

The new ZYKLOP ratchet from Wera – the specialist for fastening tools

No mechanic should be without a good ratchet. More still – a good ratchet is the heart and soul of every toolbox.

Wera combines the advantages of five ratchet types in just the one tool.

1 fine-tooth ratchet
+ 1 flex head ratchet
+ 1 angle ratchet
+ 1 nut fixing ratchet
+ 1 power ratchet

= ZYKLOP

And more besides! The Zyklop can also be used as a screwdriver.

Why should your customers choose the Zyklop from Wera?

Not only will your customers be saving future purchase costs, they can also use the Zyklop type ratchet from Wera for all their areas of work – and this at an outstanding speed coupled with an appealingly extreme robustness.

How do you profit?

Wera has been so particularly successful over recent years because it has kept on developing high-quality innovative products providing genuine solutions to user problems. **It is therefore only consistent that in 2007 Wera was voted one of the five most innovative companies on all SME sectors in Germany.**

Wera has proved that new problem solvers lead to user investments, which in turn benefits your turnover. **In addition, a Wera brand product also helps you to achieve lucrative profit margins.**

This feeling for innovations and functioning awareness for prices and profit margins has now at last settled Wera firmly on the ratchet segment as well.

Why is the Zyklop named after the Cyclops?

The unusual design of the new Wera ratchet presents a distinctive ratchet head reminiscent of a Cyclops. Not only that, customers and users find it easy to recall such a memorable name as Zyklop. And – a Cyclops is a powerful figure of legend that practically cannot be stopped once it has picked up speed. And it is exactly this effect that makes the Zyklop from Wera so special.

The Wera Zyklop presents an appealing robustness in constant use as well and its design makes it particularly ideal for maximum rates of work – and this of course in the key sizes 1/4", 3/8", and 1/2" for all sockets, extensions, bits, and many other useful auxiliaries.

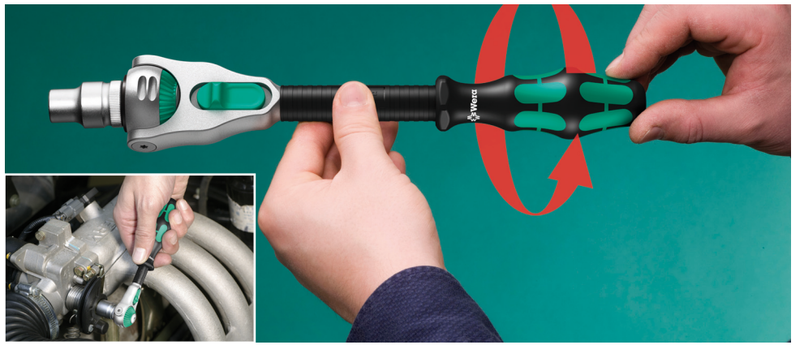

Faster than you think.

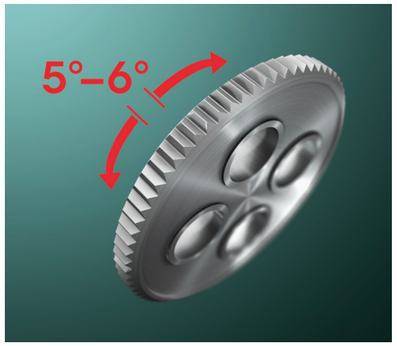

What special features can users expect?

Fast turning work

Zyklop ratchets are really fast movers: **the rotating mass design accelerates the screwdriving process.** Think of a spinning top: simply give it a brief spin, and the top rotates on and on quickly and steadily. **The combination of rotating mass design and freewheel sleeve lets you turn the nut/screw quickly.** To secure the nut/screw at their final positions, switch over the lever and tighten the screw union as necessary. The nut/screw is loosened the very same way – only in reverse. The Zykop ratchet makes your customer the king of turning work!

A perfect set of teeth!

With fine-pitched teeth the reversible ratchet has a small backlash angle of only 5° - 6°. The short stroke helps you to work quickly and precisely on all installation types – clockwise or anticlockwise.

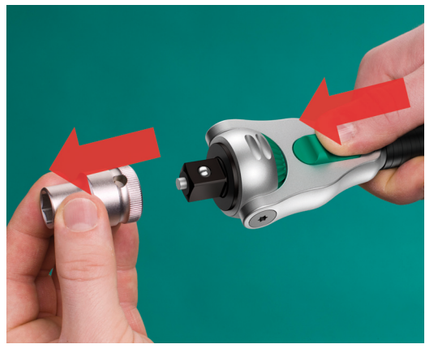

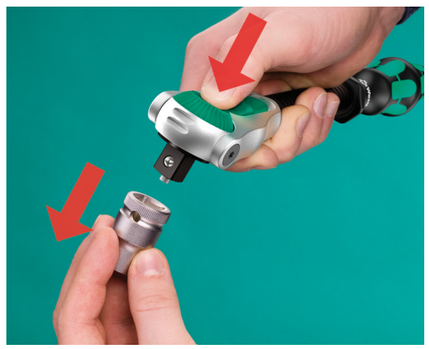

Not only for nuts!

The Zyklop not only handles nuts and hex screws, **it can also take a bit at 0° for use as a completely normal screwdriver.** At the same time the typical Wera Kraftform handle provides a high transfer of forces, accelerates work, and goes gentle on the palms.

Fast connections!

The socket lock accelerates the work needed to attach and detach inserts and extensions. **The ball lock secures both sockets and accessories for reliable and safe screwdriving work.** A quick press on the release button, and tool changes are possible at all defined positions.

So, if you shy away from close contact ...

The top line extensions are fitted in addition with a flexible locking system. With this system activated, drive handles can be secured permanently to the extension. When deactivated the system allows fast changes without manual switching.

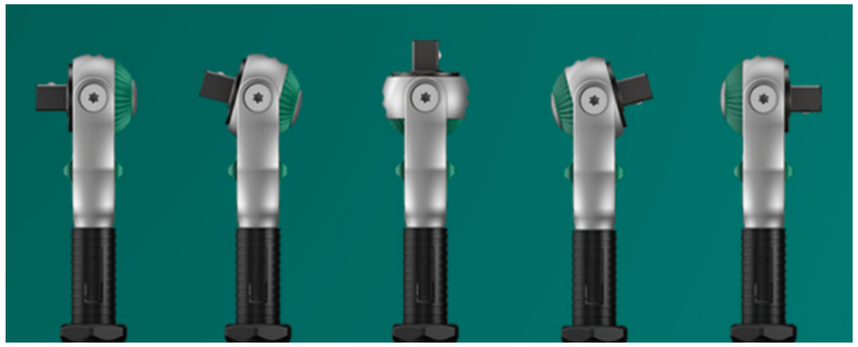

Fast connections are in high demand!

Important: **All accessory extensions are also fitted with the freewheel sleeve for accelerated work.**

Swivels by nature, if not by name!

The ratchet features a swivelling head that can be released in any position at the slide switches on both sides. This means you can work easily with your hands even in cramped or awkward spaces. The defined locking points at 0°, 90° left and right, and 15° / 90° inwards prevent the ratchet head from slipping for reliable work.

The special feature: **at the 0° position the ratchet can take a socket or the Zyklop bit holder and be used like a conventional screwdriver.**

Don't switch off – switch over!

All Zyklop ratchets feature a thumbwheel that switches quickly and easily between clockwise and anticlockwise at any position. No awkward manipulation, no lost time!

For all hands!

The ratchet head presents an ergonomic design with finger recesses that respond perfectly to your hand and fingers for turning the head. **The ratchet head lies snugly in your hand for fast work.**
A tool for all hands!

Nice and handy!

The Kraftform handle has been designed to fit snugly in your hand, so blisters and calluses are a thing of the past. **The hard materials used for the handle promote fast applications and prevent the skin from "sticking". The softer, "more anti-slip" zones facilitate the zero-loss transfer of high forces.**

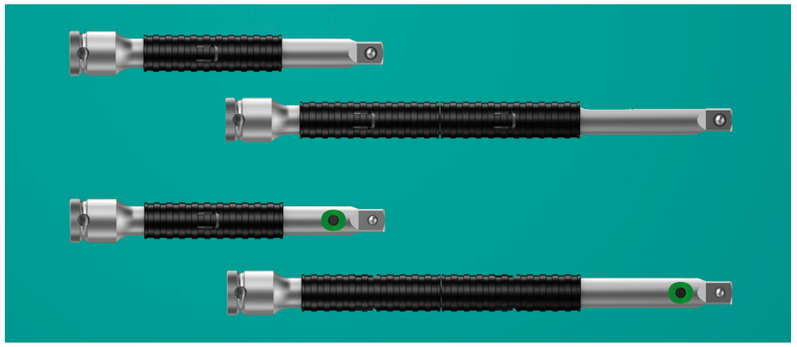

This combination is unbeatable! So all your work is done at the flick of a wrist!

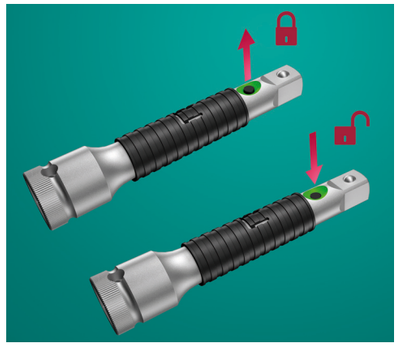

Is there any more?

The easy extension to work ...

All rigid Zyklop extensions are fitted with a freewheel sleeve. This freewheel sleeve lets you tighten and loosen screws and nuts quickly and effectively.

The top line extensions are additionally fitted with the flexible lock system. **With this system activated, drive handles can be attached permanently to the extension,** preventing loss and slipping. When the system is deactivated the sockets can be attached as usual and changed in a flash.

From another angle ...

The wobble extension pivots through 15° in all directions. This lets you work quickly and precisely in concealed and cramped spaces as well.

Socket to me!

Wera has taken up the latest industrial standard and developed its sockets accordingly. **The new manual and machine sockets can be used for both manual and machine work** (in most cases it is forbidden to use them with impact spanners). Users are therefore spared the need to have two sets of sockets for their work, and both transport and the screwing process are considerably simplified.

The knurling worked into the back end of the socket is ideal for manual applications. This position makes it easily accessible in every situation. In addition the groove presents a perfect mould for your fingers – for a good transfer of high forces. Reliable handling is also assured for work with oil.

Hard shell – soft core!

Wera has not only taken up individual Zyklop ratchets and sockets into its product range, but can also provide users with end-to-end solutions.

Users can choose between the basic and top lines for all three sizes (1/4", 3/8", 1/2"). Whatever the choice, it's the right one!

Wera attaches great importance to the product design. Accordingly, not only the ratchets themselves, also the Zyklop

ratchet boxes have been designed with attractive visual appeal. They are all manufactured from stable metal ideal for the workshop. **The rubber feet hold them securely in place at the workplace.**

The tools are bedded in foam so that they can be carried to and around the workplace safely and free of impacts. **The dual colour foam insert helps you to sort in the tools you no longer need quickly and reliably** – missing tools are immediately recognised (tool check system).

The tools' attachments and positions have been indelibly cut by laser into the lid for easy legibility. You can then find the tool you need with the minimum of effort.

So why all this?

So we can combat the faceless mass of cut price and cheap offers with a high profile tool set designed to thrill its users.

The new Zyklop from Wera
Powerful and unbelievably fast.

8100 SA 1 Zyklop ratchet set, 1/4“-drive, metric

18 piece set, in high-density foam-lined metal case
1 Zyklop ratchet with 1/4“ drive, 13 Zyklop sockets (metric),
2 Zyklop extensions (short and long) with freewheel sleeve,
1 sliding t-handle, 1 universal joint

8000 B Zyklop ratchet with 3/8“ drive

Applications: For 3/8” square drive sockets and accessories

Design: Rotating mass design and handy freewheel sleeve for faster work; swivelling ratchet head; 5 defined lock positions (at 0°, and at 15°,and 90° right and left); at 0° it can be used like a conventional screwdriver; pushbutton release; CW/ACW toggle, fine-pitched tooth design, with small return angle of 5° - 6°

Handle: Multicomponent Kraftform handle for comfort and torque

Code		mm		
05**003550**001	3/8“	199,0		1

i The new manual and machine sockets can be used for both manual and machine work (in most cases it is forbidden to use them with impact spanners). Users are therefore spared the need to have two sets of sockets for their work, and both transport and the screwing process are considerably simplified.

8790 HMB Zyklop 3/8“ socket

Applications: For hex-head fasteners
Design: For manual and (non-impact) machine applications, with ball intercept ring, knurling for reliable manual precision, chrome vanadium, brushed chromium plated finish
