Features

- maXTouch[™] Touchscreen
 - True 12-bit multiple touch with independent XY tracking for up to 10 concurrent touches in real time with touch size reporting
 - Up to 4.3 inch diagonal screen size supported with 10 mm "pinch" separation
 - Up to 10.1 inch support with correspondingly wider "pinch"
- Number of Channels
 - Up to 224 (subject to other configuration limitations)
 - Electrode grid configurations of 16–20 X and 10–14 Y lines supported (subject to a total of 30 lines)
- maXTouch™ Touch Key Support
 - Up to 32 channels can be allocated as fixed keys (subject to other configurations)
- Zero Additional Part Count
 - 16 X by 14 Y matrix (224 channels) implementable with power bypass capacitors only
- Signal Processing
 - Advanced digital filtering using both hardware engine and firmware
 - Self-calibration
 - Auto drift compensation
 - Adjacent Key Suppression[®] (AKS[™]) technology
 - Grip and face suppression
 - Reports one-touch and two-touch gestures
 - Down-scaling and clipping support to match LCD resolution
 - Ultra-fast start-up and calibration for best user experience
 - Supports axis flipping and axis switch-over for portrait and landscape modes
- Scan Speed
 - Maximum single touch >250Hz, subject to configuration
 - Configurable to allow power/speed optimization
 - Programmable timeout for automatic transition from active to idle states
- Response Times
 - Initial latency <10 ms for first touch from idle, subject to configuration
- Sensors
 - Works with PET or glass sensors, including curved profiles
 - Works with all proprietary sensor patterns recommended by Atmel®
 - Works with a passive stylus
- Panel Thickness
 - Glass up to 3 mm, screen size dependent
 - Plastic up to 1.5 mm, screen size dependent
- Interface
 - I²C-compatible slave mode 400 kHz
- Dual-rail Power
 - Interface 1.8V to 3.3V nominal, analog 2.7V to 3.3V nominal
- Power Consumption
 - Idle 80Hz: <1.8 mW, subject to configuration
 - One Touch Active 80Hz: 3.9 mW, subject to configuration
 - Sleep: 7.5 μW
- Package
 - 49-ball UFBGA 5 x 5 x 0.6 mm, 0.65 ball pitch
 - 49-ball VFBGA 5 x 5 x 1 mm, 0.65 ball pitch
 - 48-pin QFN 6 x 6 x 0.6 mm, 0.4 mm pin pitch

maXTouch[™] 224-channel Touchscreen Sensor IC

mXT224

Summary

Note: This is a summary document. A complete document is available under NDA. For more information contact www.atmel.com/touchscreen.

1.3 **Schematic**

1.3.1 49-ball UFBGA/VFBGA

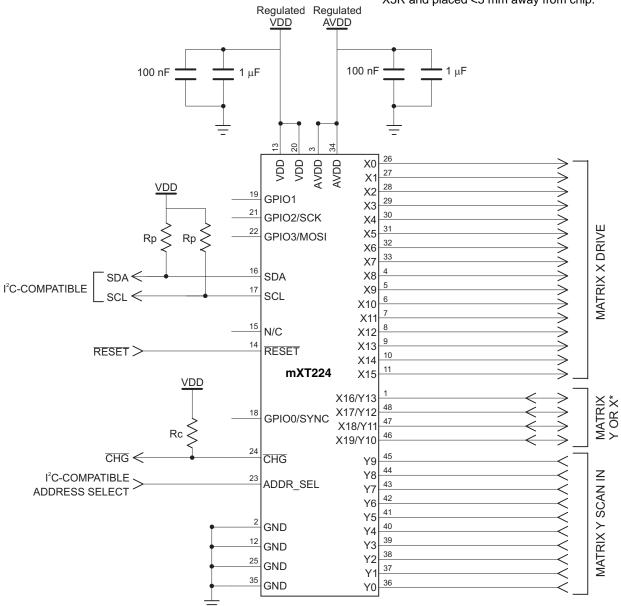

* NOTE: Y10 to Y13 scan lines may be used as additional X drive lines in extended mode (a 100Ω resistor must be added to each additional line).

1.3.2 48-pin QFN

NOTE: Bypass capacitors must be X7R or X5R and placed <5 mm away from chip.

* NOTE: Y10 to Y13 scan lines may be used as additional X drive lines in extended mode (a 100Ω resistor must be added to each additional line).

2. Overview of the mXT224

2.1 Introduction

The mXT224 uses a unique charge-transfer acquisition engine to implement the QMatrix[™] capacitive sensing method patented by Atmel[®]. This allows the measurement of up to 224 mutual capacitance nodes in under 1 ms. Coupled with a state-of-the-art XMEGA[™] CPU, the entire touchscreen sensing solution can measure, classify and track a single finger touch every 4 ms if required.

The acquisition engine uses an optimal measurement approach to ensure almost complete immunity from parasitic capacitance on the receiver inputs (Y lines). The engine includes sufficient dynamic range to cope with touchscreen mutual capacitances spanning 0.5 pF to 5 pF. This allows great flexibility for use with Atmel's proprietary ITO pattern designs. One and two layer ITO sensors are possible using glass or PET substrates.

The main AVR® XMEGA CPU has two powerful, yet low power, microsequencer coprocessors under its control. These combine to allow the signal acquisition, preprocessing, postprocessing and housekeeping to be partitioned in an efficient and flexible way. This gives ample scope for sensing algorithms, touch tracking or advanced shape-based filtering. An in-circuit reflash can be performed over the chip's hardware-driven two-wire interface (I²C-compatible).

The mXT224 represents a step improvement over competing technologies. It provides a near optimal mix of low power, small size and low part count with unrivalled true multitouch performance.

Revision History

| Revision Number | History |
|------------------------------|---------------------------------------|
| Revision AS – September 2009 | Initial release for chip revision 1.4 |
| Revision BS – October 2009 | QFN package details added |
| Revision CS – November 2009 | Updated for chip revision 1.5 |
