

Features

- Conforms to DIN EN 60751
- Wide operating temperature range:
-200°C to +600°C (Au-coated Nickel wire and Class F 0.3, Ag-Wire versions are limited to +300°C)
- Standard nominal resistances values:
R0: 100Ω and 1000Ω (others available upon request)
- Standardized Tolerance Classes:
Class F 0.1 (T = AA), F 0.15 (A), F 0.3 (B) and F 0.6 (C) accuracy with defined tolerance temperature ranges
- Excellent long-term stability
- Fast response time due to low thermal mass
- Variety of outline dimensions available to fit a wide range of space requirements
- Global interchangeability

Applications

- Temperature feedback control
- White goods
- Industrial applications
- Automotive
- Medical
- Sensing element for plug-in probes

PTF -FAMILY

Platinum Thinfil (PTF) Temperature Elements (PT-RTD's)

Product Description

The PTF family combines a group of resistance temperature detectors (RTD) using a Platinum resistor element utilizing the latest in thin film technology. It consists of a structured platinum film on a ceramic substrate, passivated by a glass coating. The connection wires are protected with glass on the welding area.

The characteristic curve of this Platinum RTD complies with DIN EN 60751. The usage of Platinum as the resistive material provides excellent long-term stability.

Due to small size and low mass, this RTD has a fast response time and low time constant; therefore, it is an optimal solution for fast and precise feedback control systems.

- Platinum Temperature Sensor (Pt-RTD)
- Conformal to DIN EN 60751
- Global interchangeability
- Wide operating temperature range
- Fast response time
- Other Geometries, Nominal Resistance values and specific Characteristics (TCR) on request
- Unprotected use of the elements in dry and clean environment only
- Resistance drift typically <0.03% after 1000h at 300°C
- Tests according to AEC-Q200 passed

PTF TEMPERATURE ELEMENTS (PT-RTD'S)

Datasheet

Sensor properties

* Operating temperature range is, -200°C to +600°C for elements with Au-coated Ni wire. Max temperature for elements with Ag wire is 300°C. Accuracy is not guaranteed if the sensor is exposed to temperatures outside the specified tolerance temperature range.

** The response times given are for comparison of several element geometries, will change on the later assemblies.

*** The limitations of measuring current values for narrower tolerance classes is made due to the self-heating effects affecting accuracy.

Parameter	Symbol	Condition	Min	Typ	Max	Unit

Calculation Formulas

The temperature dependencies of resistance of this Pt-RTD's are defined in DIN EN 60751 as:

For T ≥ 0 °C:

$$R_{(T)} = R_{(0)} \cdot (1 + a \cdot T + b \cdot T^2)$$

For T < 0 °C:

$$R_{(T)} = R_{(0)} \cdot [1 + a \cdot T + b \cdot T^2 + c \cdot (T - 100^\circ\text{C}) \cdot T^3]$$

Coefficients:

$$a = 3.9083\text{E-}03 \quad b = -5.775\text{E-}07 \quad c = -4.183\text{E-}12$$

Tolerances:

Class F 0.1 (T = AA):	± (0.10+0.0017* T/°C) °C	(-30...+200 °C)
Class F 0.15 (A)	± (0.15+0.002* T/°C) °C	(-30...+300 °C)
Class F 0.3 (B):	± (0.30+0.005* T/°C) °C	(-50...+600 °C)
Class F 0.6 (C):	± (0.60+0.06* T/°C) °C	(-50...+600 °C)
Class F 0.3 B (Cryo)	± (0.30+0.005* T/°C) °C	(-200...+200 °C)
