

Agilent HSMx-A4xx-xxxxx SMT LED

Surface Mount LED Indicator

Data Sheet

Description

Agilent Power PLCC-4 is an extension of our PLCC-2 SMT LEDs. The package can be driven at higher current due to its superior package design. The product is able to dissipate heat more efficiently compared to the conventional PLCC-2 SMT LEDs. In proportion to the increase in driving current, this family of LEDs is able to produce higher light output compared to the conventional PLCC-2 SMT LEDs.

These SMT LEDs have higher reliability and better performance and are designed to work under a wide range of environmental conditions. This higher reliability makes them suitable for use under harsh environment and conditions like automotive. In addition, they are also suitable to be used in electronic signs and signals.

To facilitate easy pick and place assembly, the LEDs are packed in EIA-compliant tape and reel. Every reel will be shipped in single intensity and color bin (except for red color), to provide close uniformity.

These LEDs are compatible with IR solder reflow process. Due to the high reliability feature of these products, they also can be mounted using through-the-wave soldering process.

There are a variety of colors and various viewing angles (30°, 60° and 120°) available in these SMT LEDs. Ideally, the 30° parts are suitable for light piping where focused intensities are required. As for the 60° and 120°, they are most suitable for automotive interior and exterior lighting and electronic signs applications.

Features

- Industry standard PLCC-4
- High reliability LED package
- High brightness using AlInGaP and InGaN dice technologies
- High optical efficiency
- Higher ambient temperature at the same current possible compared to PLCC-2
- Available in full selection of colors
- Super wide viewing angle at 120°
- Available in 8mm carrier tape on 7-inch reel
- Compatible with both IR and TTW soldering process

Applications

- Interior automotive
 - Instrument panel backlighting
 - Central console backlighting
 - Cabin backlighting
 - Navigation and audio system
 - Dome lighting
 - Push button backlighting
- Exterior automotive
 - Turn signals
 - CHMSL
 - Rear combination lamp
 - Puddle light
- Electronic signs and signals
 - Interior full color sign
 - Variable message sign
- Office automation, home appliances, industrial equipment
 - Front panel backlighting
 - Push button backlighting
 - Display backlighting

CAUTION: HSMN-, HSMK-, HSM-M-A40x-xxxxxx LEDs are Class 2 ESD sensitive. Please observe appropriate precautions during handling and processing. Refer to Agilent Application Note AN-1142 for additional details.

Notes:

- Derate linearly as shown in figure 5.
- Duty factor = 10%, Frequency = 1 kHz.
- Drive current between 10 mA and 70 mA is recommended for best long-term performance.
- Operation at currents below 5 mA is not recommended.

Notes:

1. The dominant wavelength, λ_D , is derived from the CIE Chromaticity Diagram and represents the color of the device.
2. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is 1/2 the peak intensity.
3. Radiant intensity, I_e in watts/steradian, may be calculated from the equation $I_e = I_v/\eta_v$, where I_v is the luminous intensity in candelas and η_v is the luminous efficacy in lumens/watt.

Storage Condition: 5 to 30°C @
60% relative humidity max.

Baking is required under the
condition:

- the humidity indicator card
color becoming pink
- the pack has been opened for
more than 4 weeks

Baking recommended condition:
60 ± 5°C for 20 hours.
