

MAV1602

VHF NGP 2.5 dBd Marine Antenna

Thank you for purchasing this fine Laird Technologies product designed for the most demanding Mariner.

With its stainless steel bracket and hardware, your antenna is ready to install. Simply run your coax feed line from the marine radio to the antenna and attach it to the connector at the base. This requires that your feed line be terminated with a PL259 connector. Laird Technologies also manufactures a variety of feedline kits.

The antenna is tuned at the factory for mid band (156.8 MHz) and does not require adjustment or ground plane for efficient signal radiation.

A complete line of Marine antennas and accessories are available from Laird Technologies. To see them all, visit our website at www.lairdtech.com
